

E-mobility Support and Investment Platform for Asia & Pacific Webinar Series

E-Mobility Policy Framework

Wednesday 4th October

Speaker: Moshiuzzaman Mahmud

Technical Director at Integrated Transport Planning
Moshiuzzaman provided an overview of the fundamental building blocks of EV
policy development, including vehicle segments, energy sector, technology,
industrial development, inclusivity and institutional readiness.

Key Insights:

- Electric Vehicle policy needs to be forward looking and ambitious, yet practical. Policy should consider both demand (supporting transport systems and energy transition) and supply (ensuring access to technology and funding).
- Policy needs to be inclusive and economically viable. Wide stakeholder buy-in is required across both the public and private sector.
- Institutional readiness is key to own and implement successful policy.
