Innovative Project Story TUVALU - Outer Island Maritime Infrastructure (OIMI) Project

Connecting people in the islands of Tuvalu

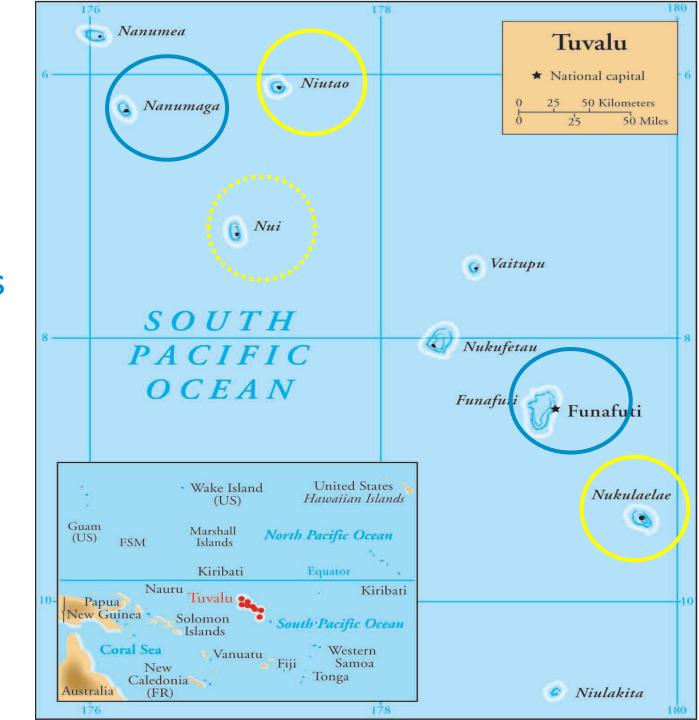

Siulai Fioana Elisala Project Manager- MICRO Project Ministry of Communications and Transport

Background Information

- Populations 11,000
- Land Area 26 square kilometres
- Total of nine islands
- Capital Funafuti

OIMI Project key objectives:

- i) Rehabilitating and improving maritime infrastructure in selected islands of Tuvalu, some of which were damaged by Tropical Cyclone Pam in March 2015
- ii) Improving safety, efficiency, and sustainability of maritime transportation between Funafuti, the capital, and islands.
- iii) The project will improve the connectivity problems that constrain its economic and social development.

1. Innovation

Designed to adapt impacts of climate change and withstand natural disasters.

Need to minimize construction impacts in a pristine environment.

2. Issues

Tuvalu is one of the smallest and most remote ADB member countries with its dispersed geography stretched across 9 outer islands.

Need to provide harbours for the safe movement of people and goods. Lack of harbours is limiting access to economic opportunities and essential social services.

3. Approach / Solution

- i. Construction of harbours in the islands: Nukulaelae, Niutao, Nanumaga and Nui.
- ii. Master plan for future harbour development in islands,
- iii. Strengthening of institutional capacity to maintain the harbours including O&M manuals.

4. Story behind the story

Importance to engage with local communities in the islands:

- Small population that is strongly affected during construction
- Need to employ local workers
- Provision of supplies for the workers
- Relationship and communication management between contractors, workers and small population.
