30 March 2022 • 2:00 pm (Manila time)

Join us to find out in a knowledge webinar by SAHS in collaboration with SDCC and SARD on the use of digital health credentials for COVID-19 vaccination and testing campaigns and beyond. All staff and DMC officials interested in Verifiable- Credentials Issuance platforms to reduce COVID-19 spread and create an inclusive patient-centered health ecosystem are encouraged to attend.

Digital COVID-Credentials has proven to be an effective tool for countries to restart mobility for work and travel. Such credentials have aided policymakers in negating the risk of COVID-19 spread, by virtue of clearly ascertaining the vaccination or testing status, in a fast and automated way rather than through laborious manual inspections.

Looking beyond COVID, the experience from various digital COVID-credential implementations around the world have demonstrated how digitally signed and offline-verifiable credentialing tools are a great lever to accelerate the long-pending push for wider "health data-personalization" and "enhanced trust" in public health transactions. These are critical priorities that will encourage countries to transition towards an inclusive patient-centered health ecosystem, as well as strengthen the argument for trust-based data-sharing, to foster continuity of care.

This event is open to any ADB internal and external audience, especially practitioners and policy makers from developing member countries.

Viraj Tyagi
[CEO, eGOV Foundation]
is passionate about the impact of a collaboration between public digital platforms, policies, and ecosystem in solving complex societal problems at scale and speed. He is on the board of several start-ups and companies. He is an alumnus of Indian Institute of Management – Bangalore (IIM-B) and Indian Institute of technology (IIT – BHU).

Pradipta Kundu
[Mission Leader - Health, eGOV Foundation]
is a software professional with over 23 years' experience, Pradipta, in the last five years co-founded Samanvay Foundation a non-profit focused on technology heavy lifting. She played various roles from managing large software delivery projects to exploring the possibility of IT to improve health to the underserved working with large and small, international, and local NGOs, and governments in multiple countries.

Welcome Address	**Thiam Hee Ng,** Director, SARC	2 mins
