ADB

**Lesson from the Field: Success stories of
mitigation measures in maintaining and
enhancing connectivity – Key Takeaways**

Lessons Learned from Case Studies

Banff National Park (Alberta, CANADA)

Long-term research integrating behavior, landscape ecology and conservation along the Trans-Canada Highway

Terai Arc Landscape (NEPAL)

Smart Infrastructure Planning and Design to Protect Natural Habitats and Biodiversity, Mahendra Highway (Narayanghat-HetaudaPathlaiya)

BANFF NATIONAL PARK

Alberta, CANADA

Trans-Canada Highway

A Big Idea: Yellowstone to Yukon Conservation Initiative

Base map provided by Y2Y

Needs for large scale connectivity

Carnivores capable of long distance movements (wolves, lynx, grizzly bears, wolverines...)

Boundaries mean nothing...

Transboundary conservation needed

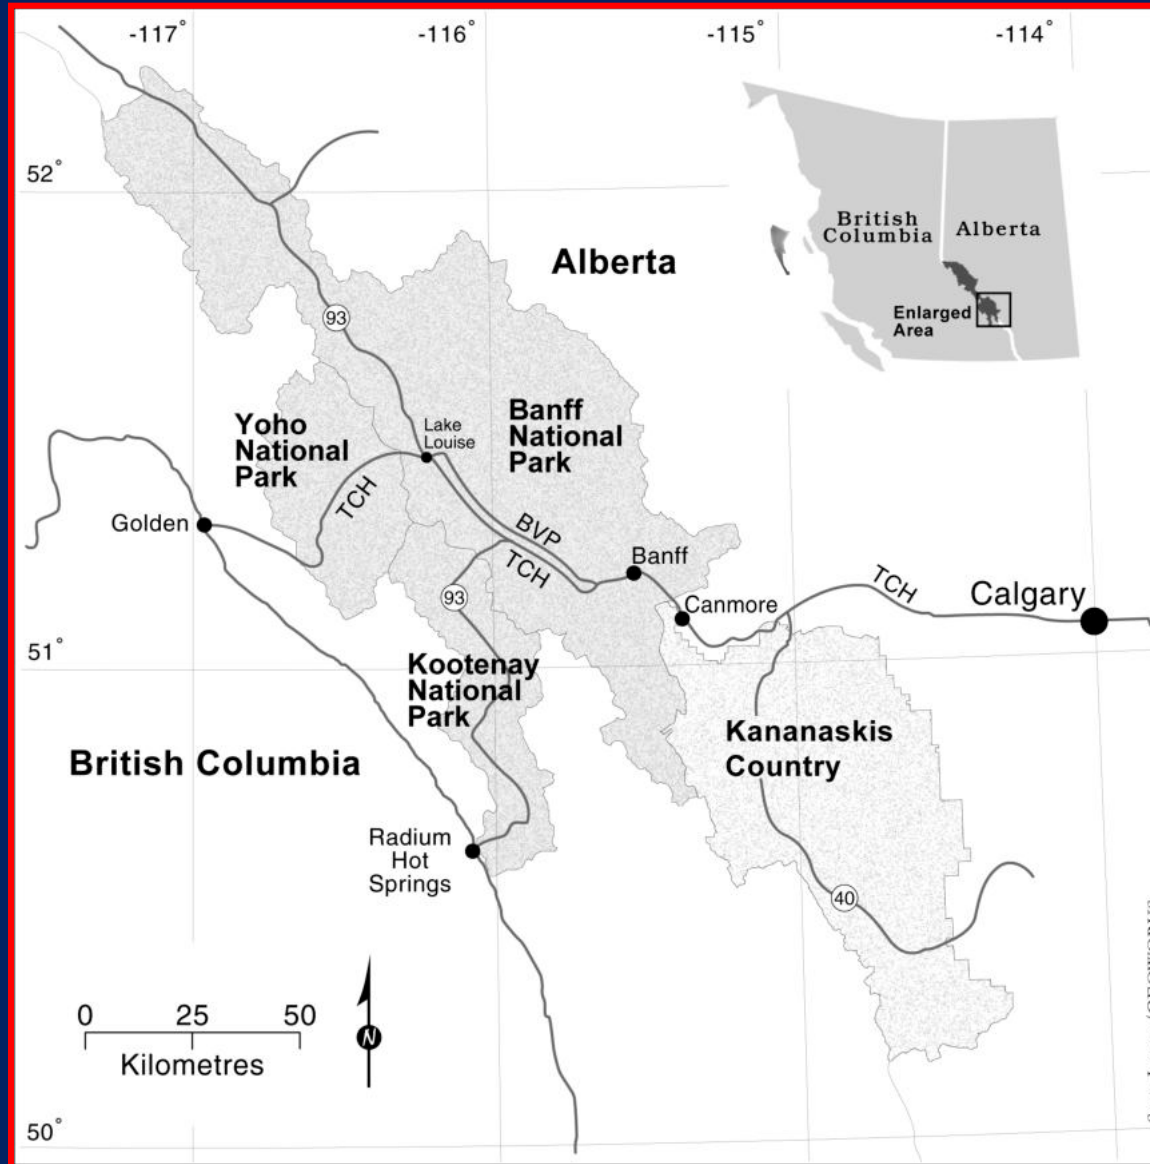

Keeping the connections intact

with landscape corridors and passages

Large Scale: Land Securement & Mgt
East-West Highway Systems
Local Scale: Site-Specific Measures

Trans-Canada Highway – Banff National Park, Alberta, Canada

Banff-Bow Valley

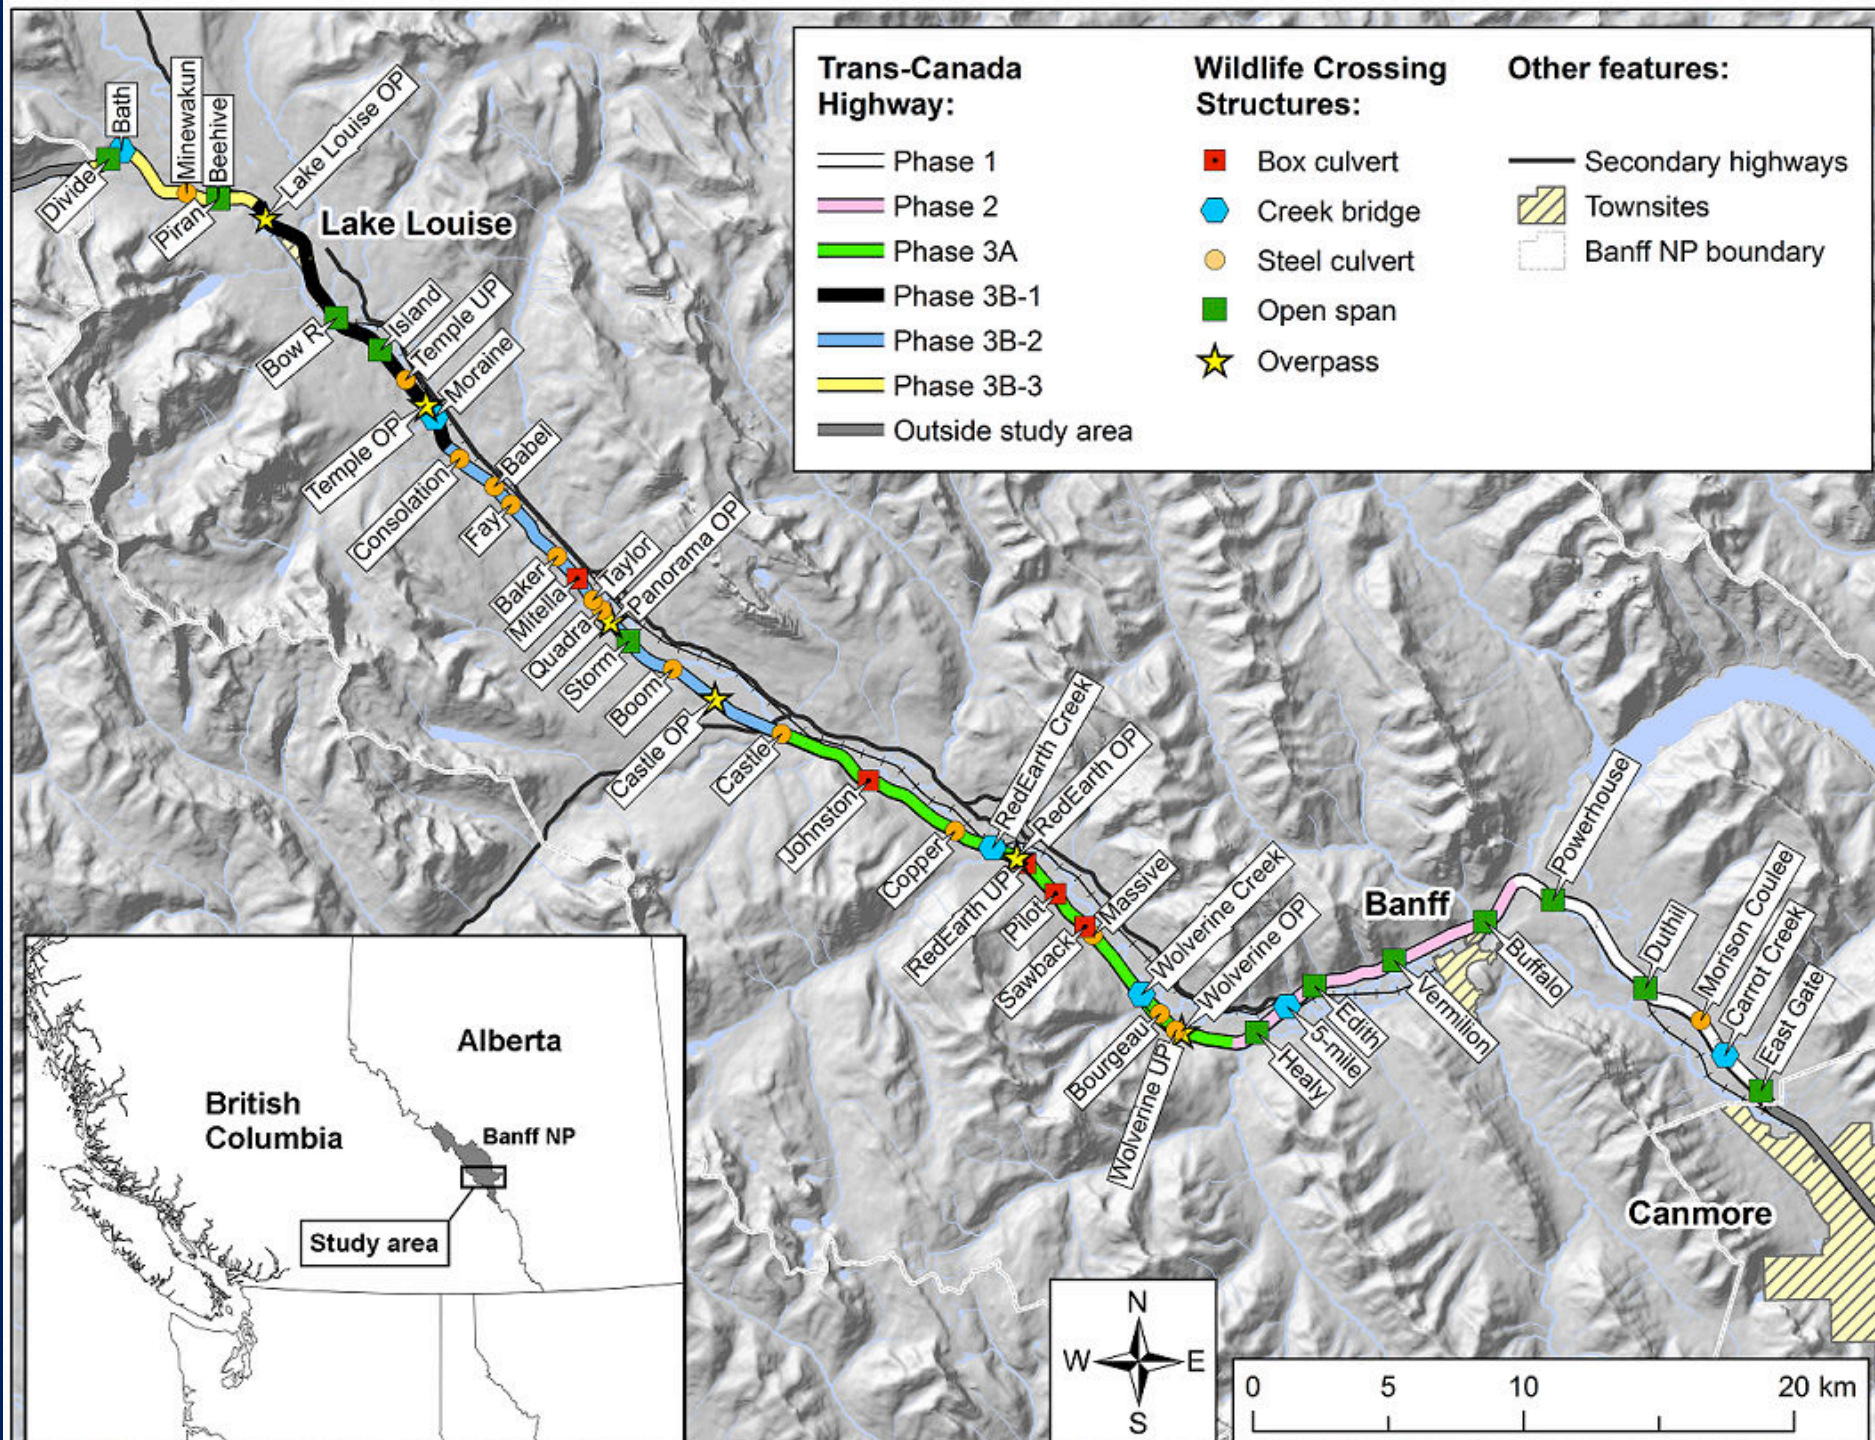

Banff NP = 6640 Km²

4 Mountain Parks = 20,235 Km²
(Banff, Yoho, Kootenay, Jasper)

UNESCO World Heritage Site

4 Million visitors per year

Large landscape context:
Critical fracture zone in Y2Y
ecoregion

Suite of 11 large mammal species

17 Years
(1996-2014)

?? What Did We Learn ??

?

Key Questions for Management of Highway

Does mitigation (fencing/passage) reduce wildlife mortality ?

Passages being used (Individual level) ? What species?

Are passages benefitting populations ?

Do existing drainage culverts act as habitat linkages ?

Do wildlife adapt to passages over time ?

Is there a "prey trap" effect at passages ?

Do wildlife have normal activity cycles using passages?

Is there a demographic filter effect at passages ?

....

Key Questions for Management of Highway

Does mitigation (fencing/passage) reduce wildlife mortality ?

Passages being used (Individual level) ? What species?

Are passages benefitting populations ?

Do existing drainage culverts act as habitat linkages ?

Do wildlife adapt to passages over time ?

Is there a "prey trap" effect at passages ?

Do wildlife have normal activity cycles using passages?

Is there a demographic filter effect at passages ?

Design and Landscape Attributes for Crossing Structures

Underpass:
Creek bridge

T Clevenger

Underpass:
Box culvert

T Clevenger

Underpass:
Open span 4 x 12 m

T Clevenger

Underpass:
4 x 7 m

T Clevenger

Overpass:
50 & 60 m wide

ARC
Evan M. Winkler, 2006

Wildlife Crossing Structure Use

Banff National Park, Alberta

(Nov 1996 to Mar 2014)

>150,000 detected crossings
11 spp. large mammals

Ungulates

Elk	53,251
Deer	72,857
Moose	534
Sheep	4999

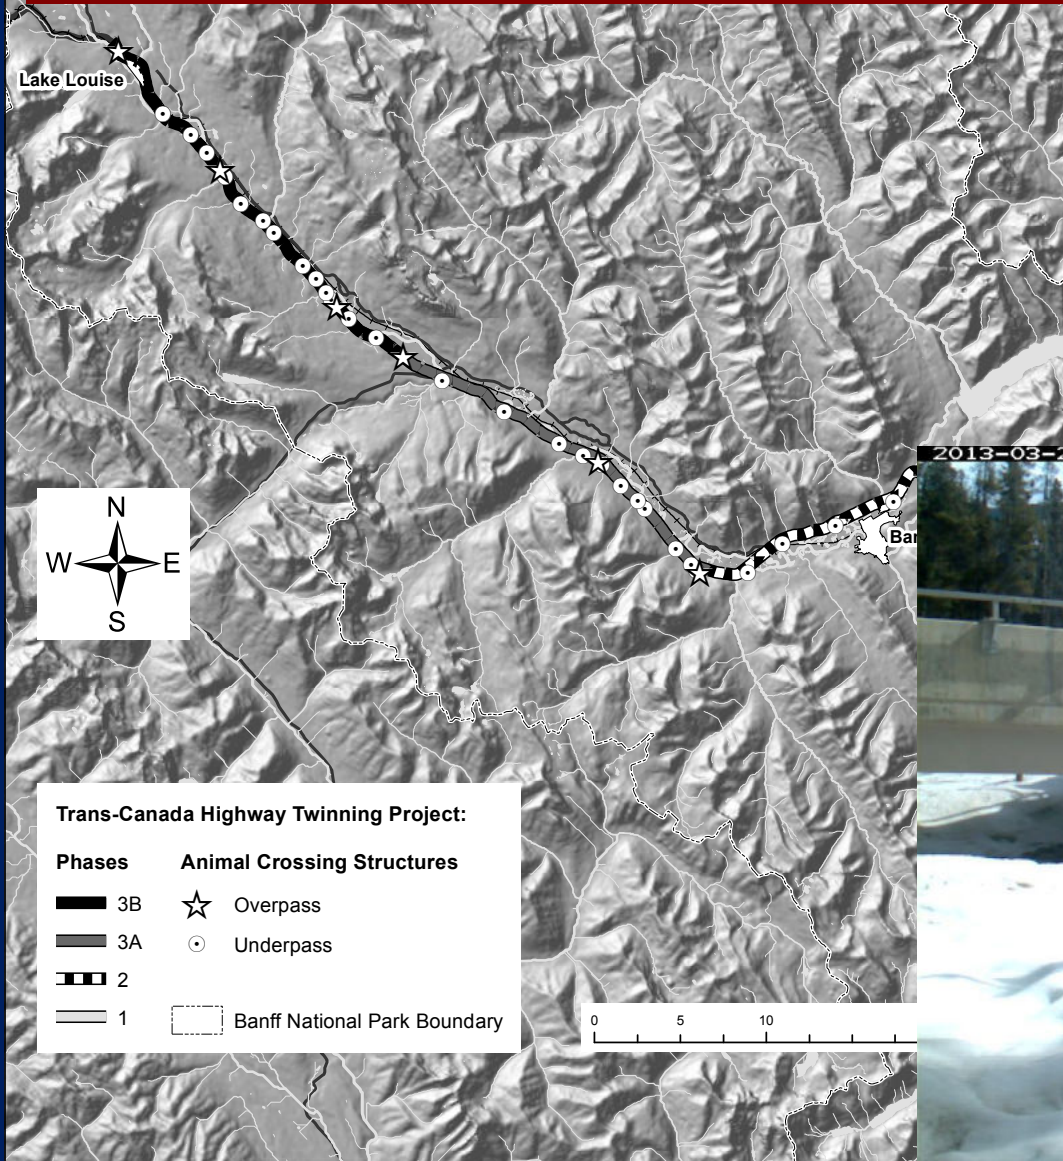

Carnivores

Black bear	1663
Grizzly bear	1549
Cougar	1627
Wolf	6826

Species response to Crossing Structures

Physical, Environmental & Human Use Attributes

- Human use effects
- Species-specific needs
- Adaptation periods

Grizzly bear

Key Questions for Management of Highway

Does mitigation (fencing/passage) reduce wildlife mortality ?

Passages being used (Individual level) ? What species?

Are passages benefitting populations ?

Do existing drainage culverts act as habitat linkages ?

Do wildlife adapt to passages over time ?

Is there a "prey trap" effect at passages ?

Do wildlife have normal activity cycles using passages?

Is there a demographic filter effect at passages ?

....

Are crossing structures prey traps ?

Key Questions for Management of Highway

Does mitigation (fencing/passage) reduce wildlife mortality ?

Passages being used (Individual level) ? What species?

Are passages benefitting populations ?

Do existing drainage culverts act as habitat linkages ?

Do wildlife adapt to passages over time ?

Is there a "prey trap" effect at passages ?

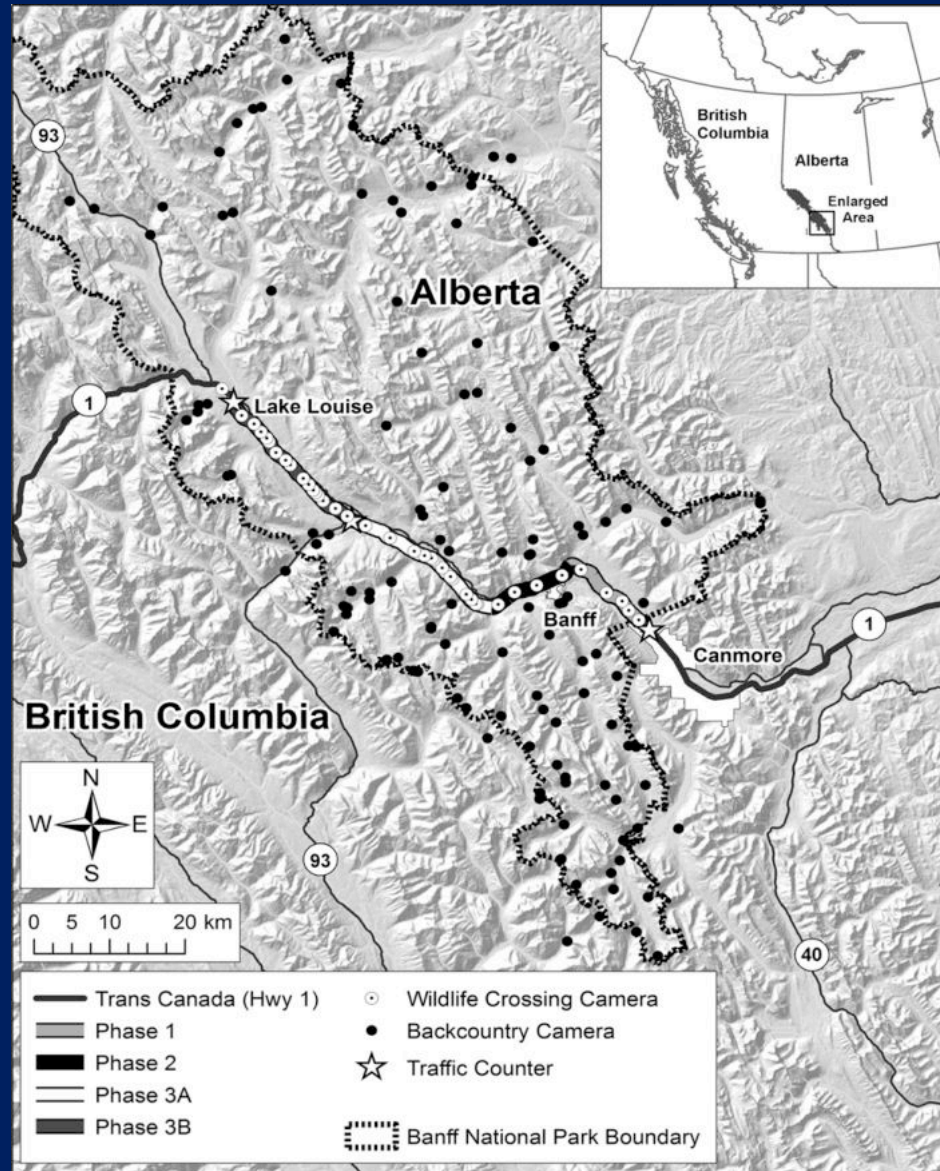

Do wildlife have normal activity cycles using passages?

Is there a demographic filter effect at passages ?

....

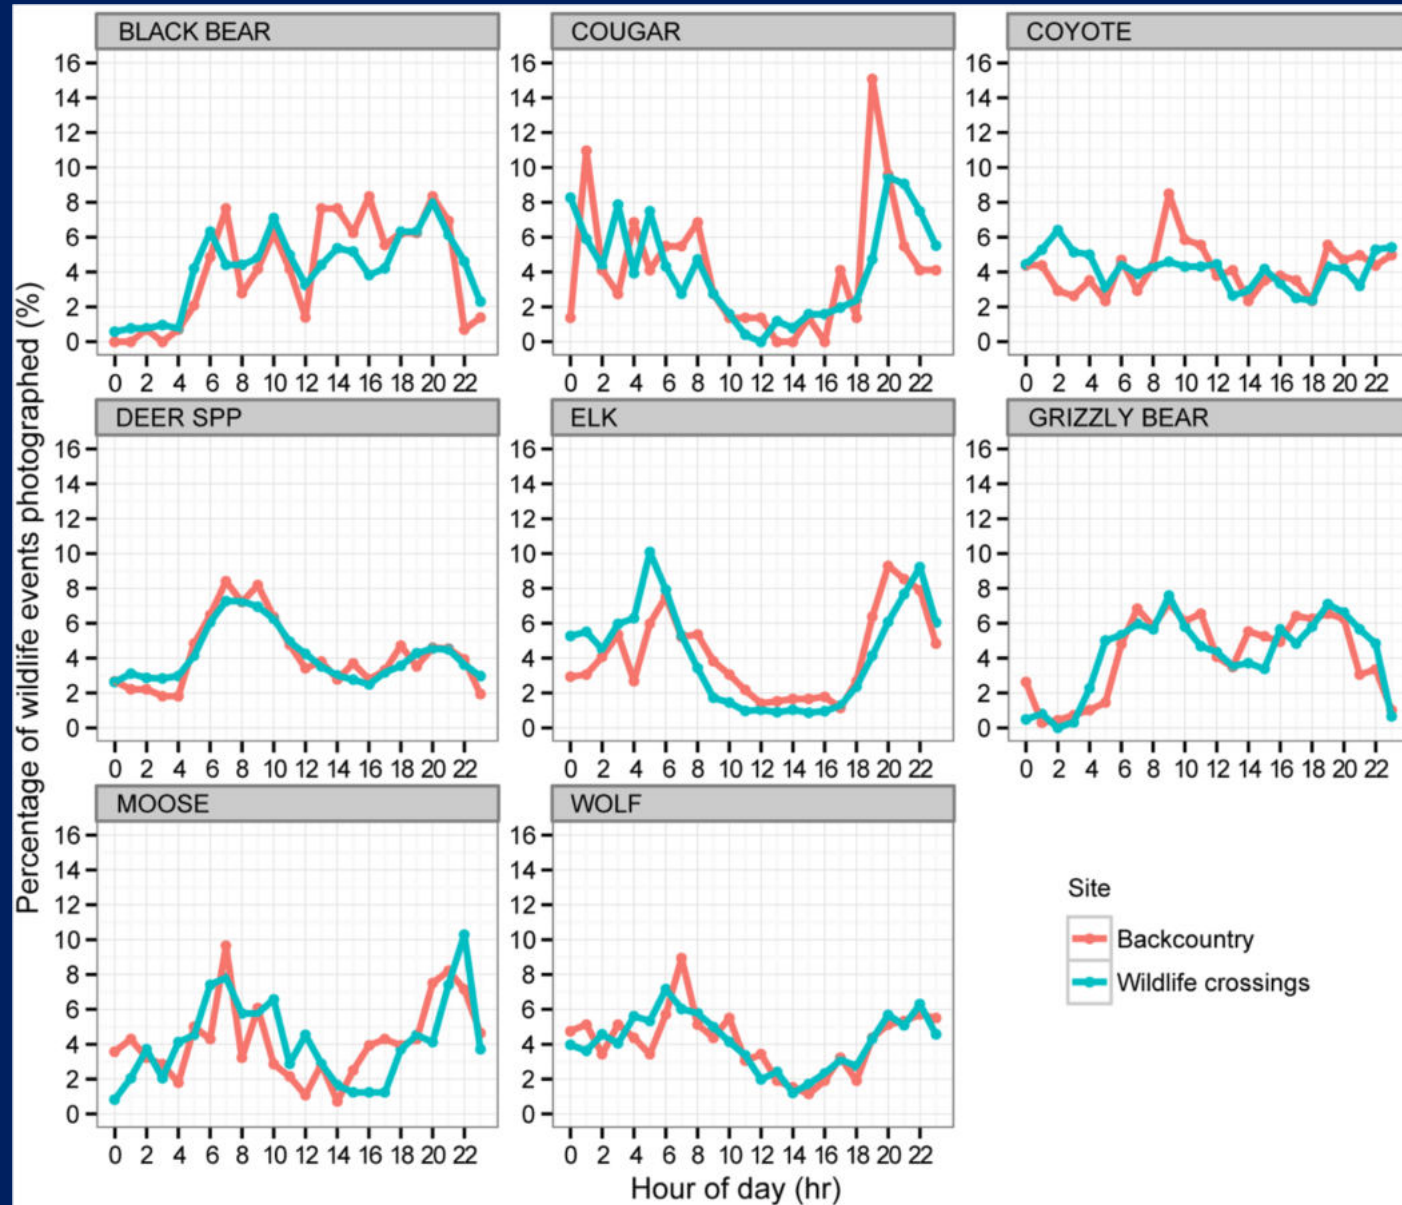

Anthropogenic effects on activity patterns of wildlife at crossing structures

Barrueto et al
2014
Ecosphere

Anthropogenic effects on activity patterns of wildlife at crossing structures

Key Questions for Management of Highway

Does mitigation (fencing/passage) reduce wildlife mortality ?

Passages being used (Individual level) ? What species?

Are passages benefitting populations ?

Do existing drainage culverts act as habitat linkages ?

Do wildlife adapt to passages over time ?

Is there a "prey trap" effect at passages ?

Do wildlife have normal activity cycles using passages?

Is there a demographic filter effect at passages ?

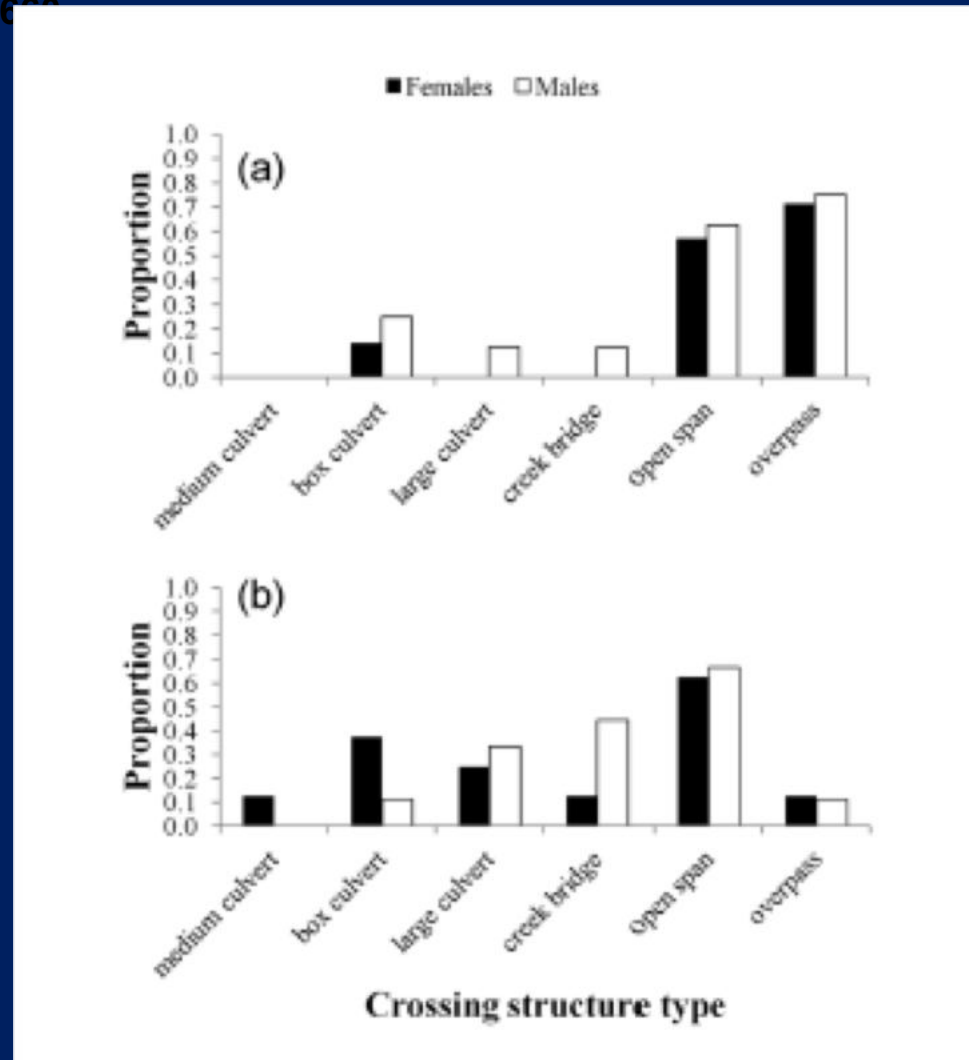

....

Demographic Filtering at Wildlife Crossings

Genotyping bears using crossing structures

N=622

Demographic filtering of Wildlife Crossing Structures

Singletons

Impact of Banff Research Results

East-West Fracture Zones

1. Hwy 75, Ketchum, ID
2. Reynolds Pass, ID
3. Togwotee Pass, WY
4. I-90 Bozeman Pass, MT
5. U.S Hwy 93, MT
6. US Hwy 95, ID
7. Hwy 3, AB-BC
8. Kootenay NP, BC
9. TCH-Banff-Yoho NPs,

* I-90 Snoqualmie Pass, WA

Smart Infrastructure Planning and Design to Protect Natural Habitats and Biodiversity:

Ecological Assessment of the NHP Road Upgrading

ADB Technical Assistance project

LAST CHANCE LANDSCAPE

NHP Road Expansion Project

Expansion 2- to 4-lanes

Increased Traffic volumes
Increased Mortality risk
Increased Barrier effects
Increased Pop isolation

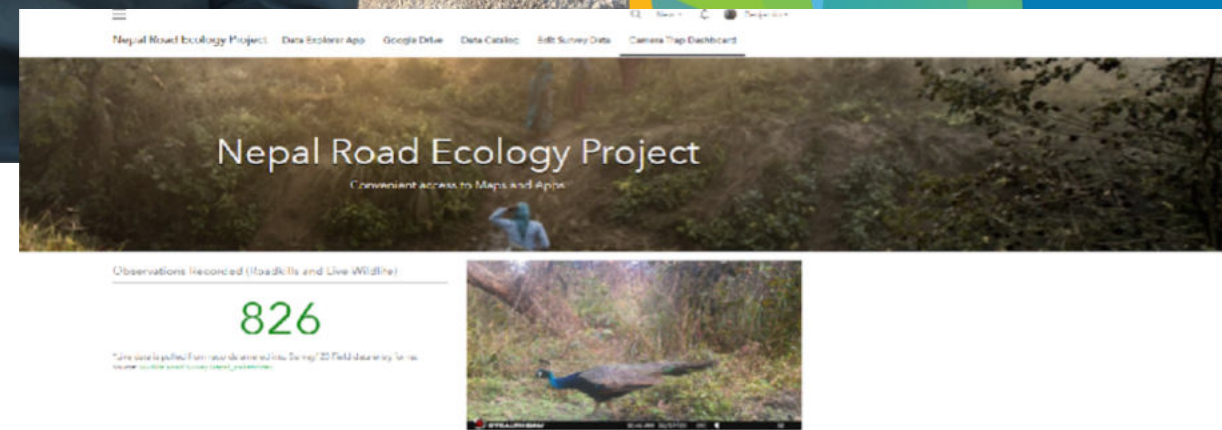

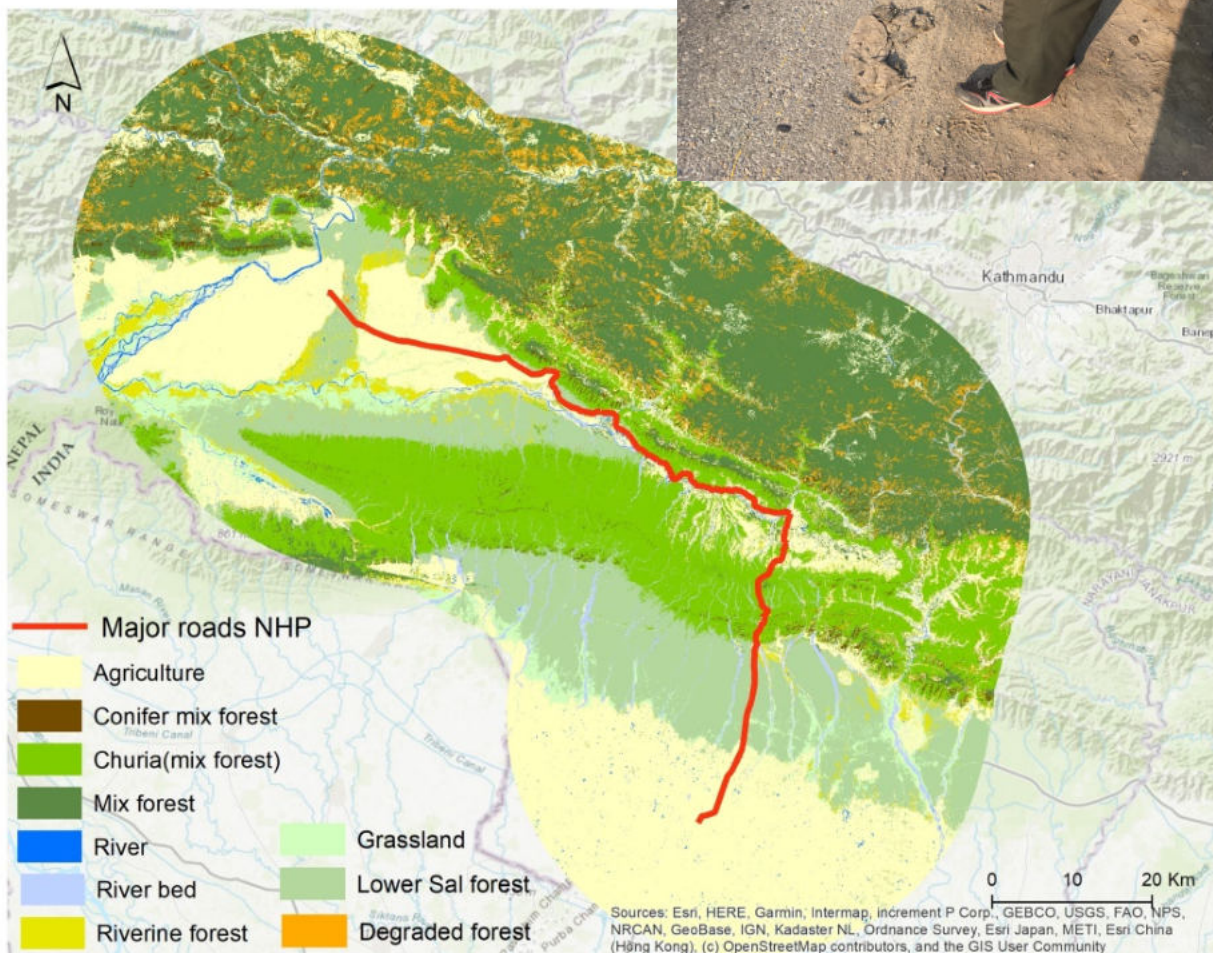

MULTI-TAXA FOCUS

STUDY AREA

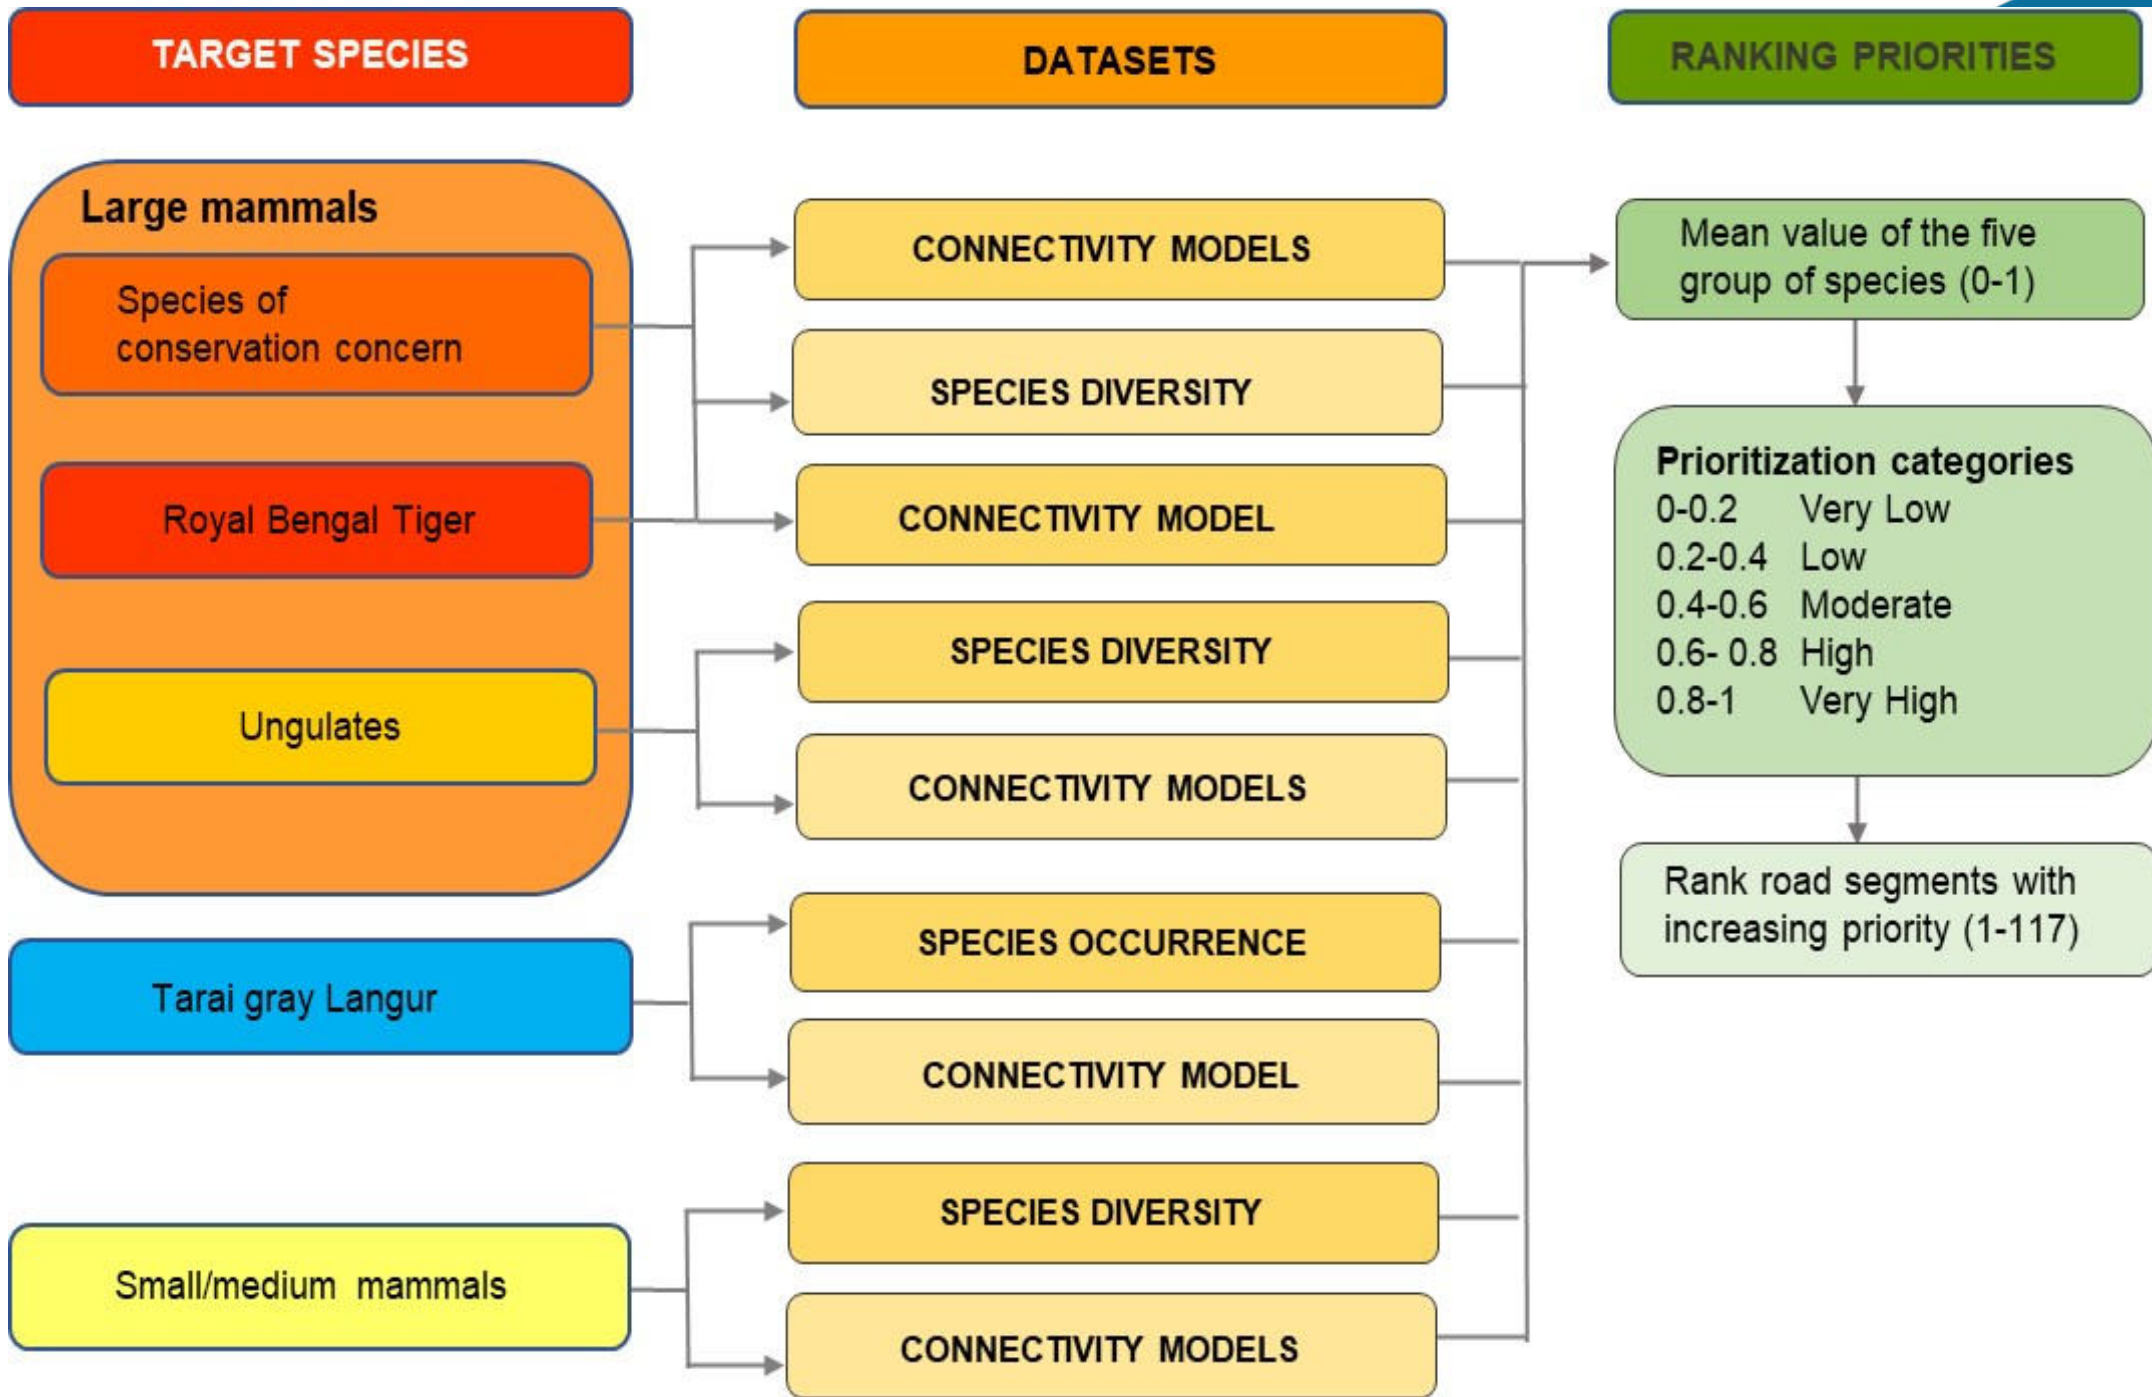

METHODS

The following data entry forms can be used through a web browser or in the Survey123 apps. Download the app from [Google Play Store](#) or [Apple App Store](#). Just search for Survey123. Once the app is installed on your phone, use the phone's camera on the QR Code below or the url below to access the data entry forms.

Below you can see the live data submitted through these forms.

RECOMMENDATIONS FOR MITIGATION

1. Biodiversity Conservation

Large Mammals

Tarai gray langur

Small/Medium-sized mammals

2. Key Drainages

3. Key Locations

4. Default Drainages

Key Lessons and Learning

“Scientific” approach (planning & evaluation) – *Int’l standards*

Adequate sampling periods (pre- & post-mitigation)

Spurious results

Long-term monitoring and research !

(=model projects) *Rigorous results*

Informing and Integration in early phase

Learning/technology transfer to other projects

Capitalize on efforts and knowledge

Prioritization of key sites is necessary

Wise investments

Partnerships & Coordination

Everyone pays
