# Modelling biodiversity impacts of alternative infrastructure development scenarios

Rebecca Pirzl & Karel Mokany | April 2022

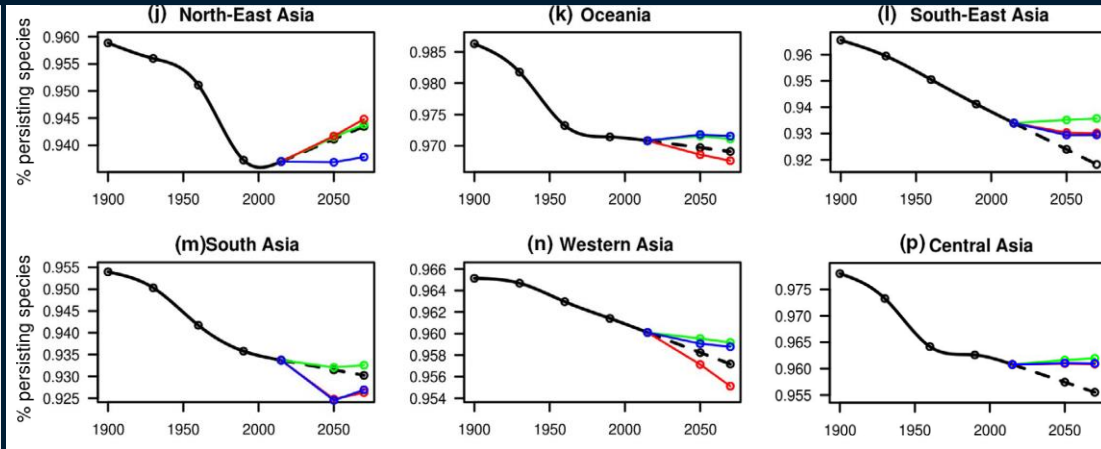

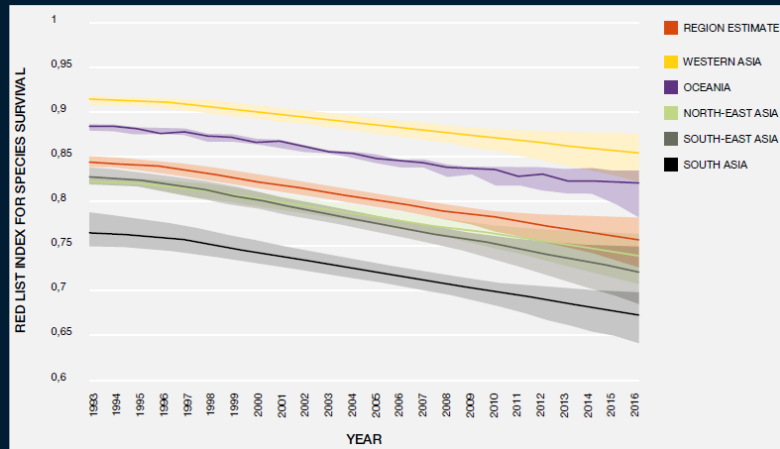

Australia's National Science Agency

# Biodiversity and nature's benefits to people

# Current trends in biodiversity

IPBES (2018) The IPBES Regional Assessment Report on Biodiversity & Ecosystem Services for Asia & the Pacific

DiMarco et al. (2019) *Global Change Biology*, 25: 2763-2778.

# Land use change and accumulating impacts

NASA Earth Observatory images for Cambodia, by Joshua Stevens, U.S. Geological Survey and Global Forest Watch.

# Common approaches to considering biodiversity

Avoid impacting:

- Listed threatened species

- Protected areas

- Areas of biodiversity importance

Considering biodiversity more broadly

# BILBI – advanced biodiversity assessments

## Indicators: tracking progress for biodiversity

## Accounts: reporting for nations & enterprises

## Impact assessment: development & biodiversity

## Scenarios: considering alternative futures

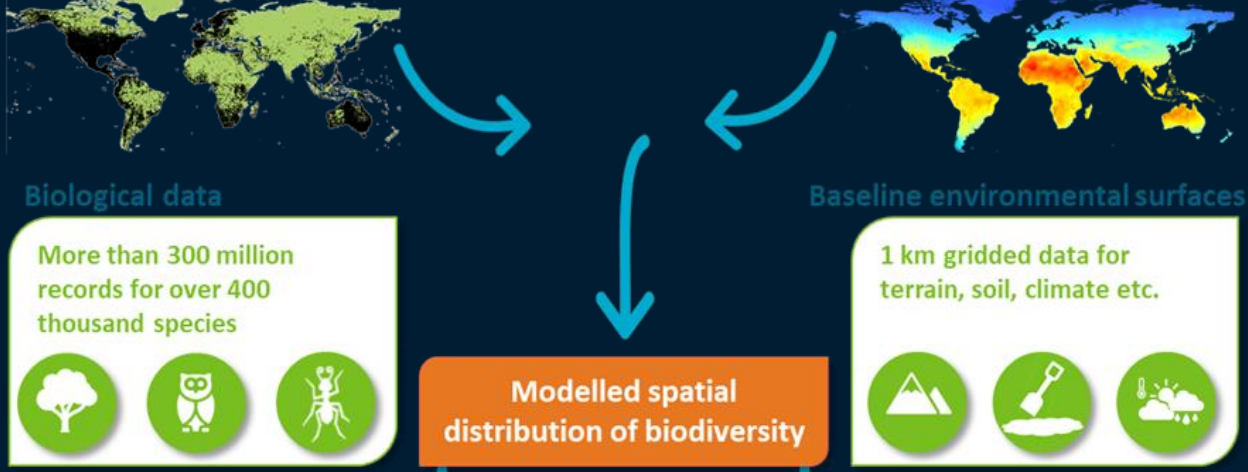

## Prioritisation: which areas to retain & restore

## Strategic planning and cumulative impacts

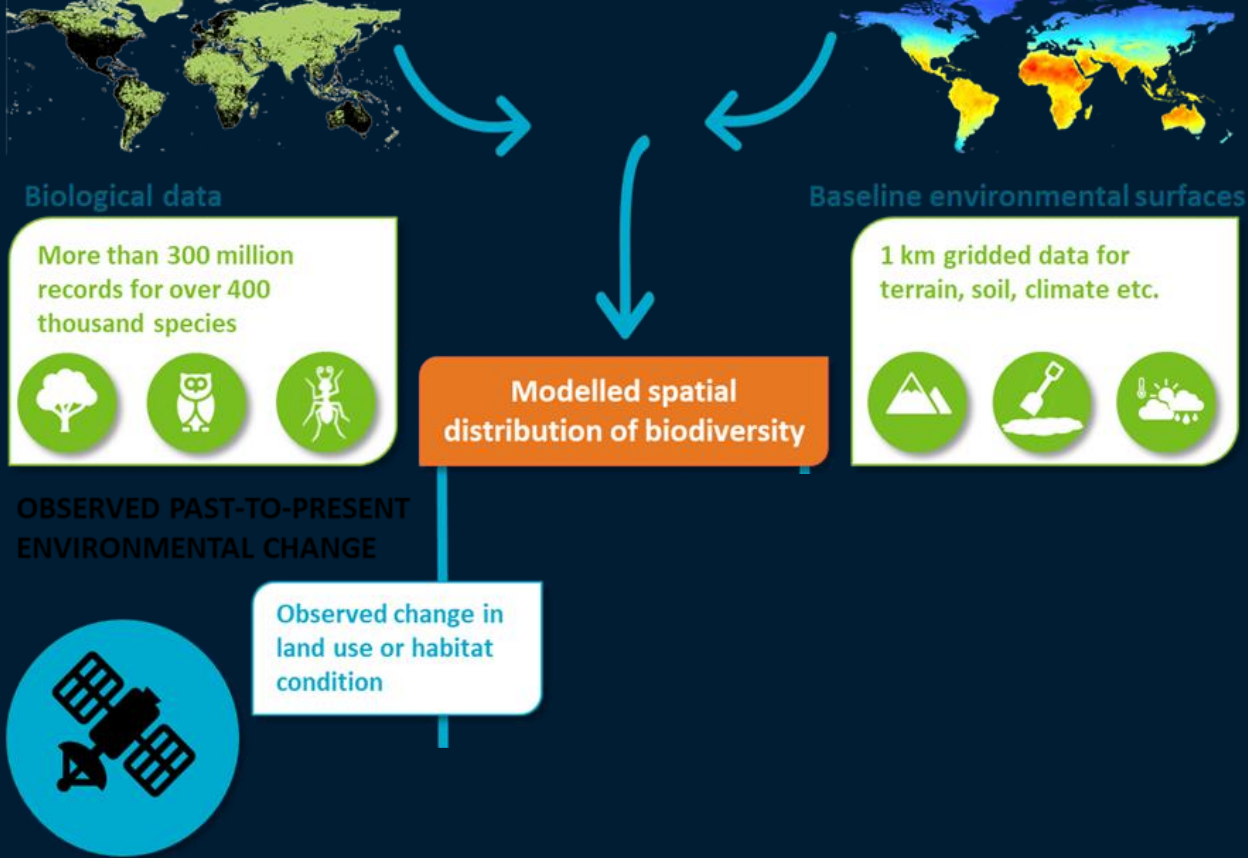

# BULLB

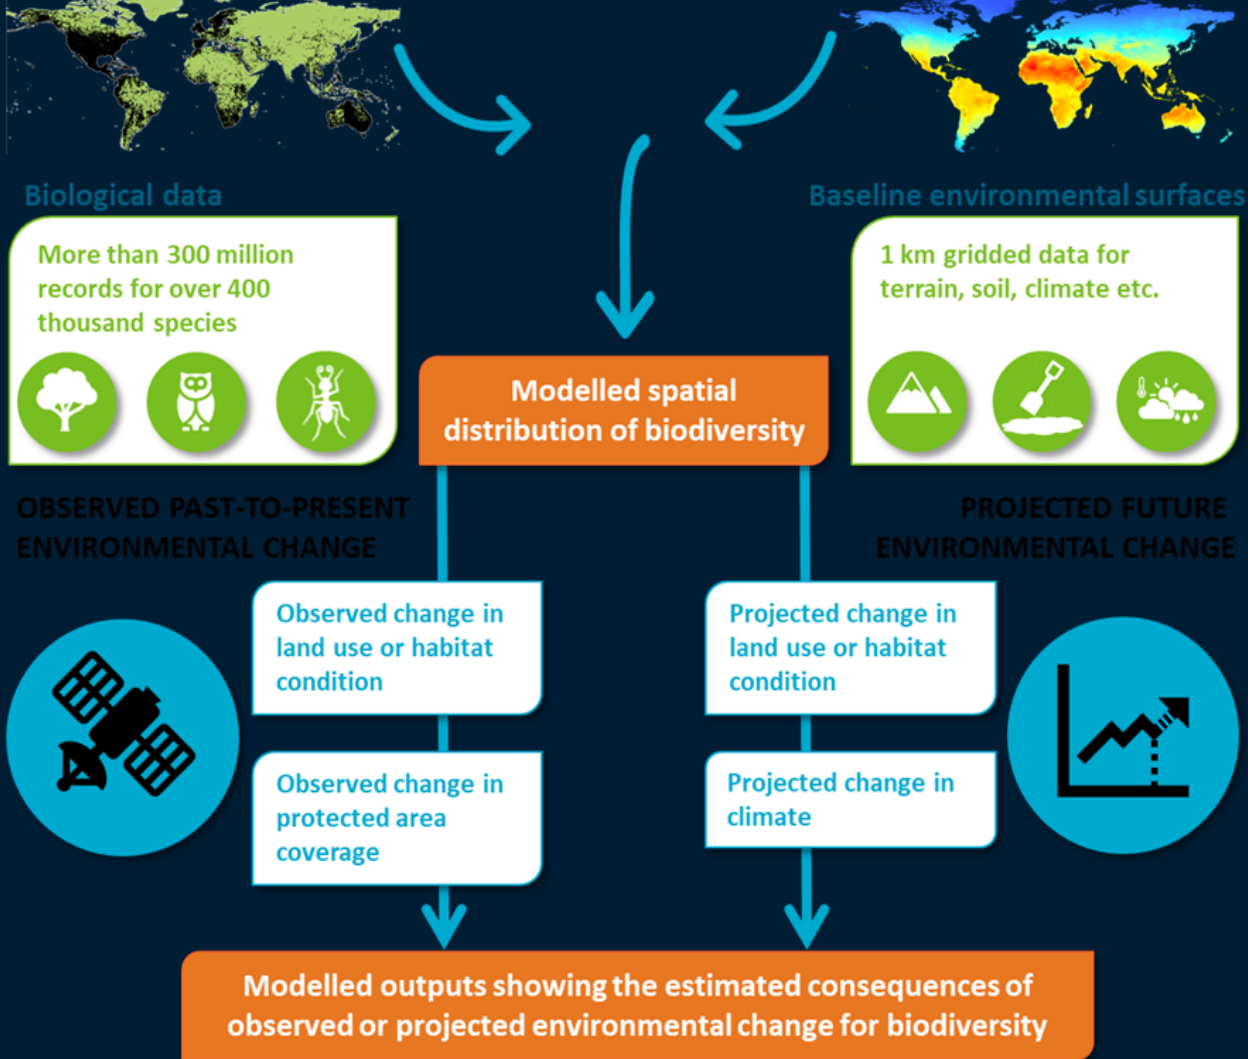

# BULLB

# BIB

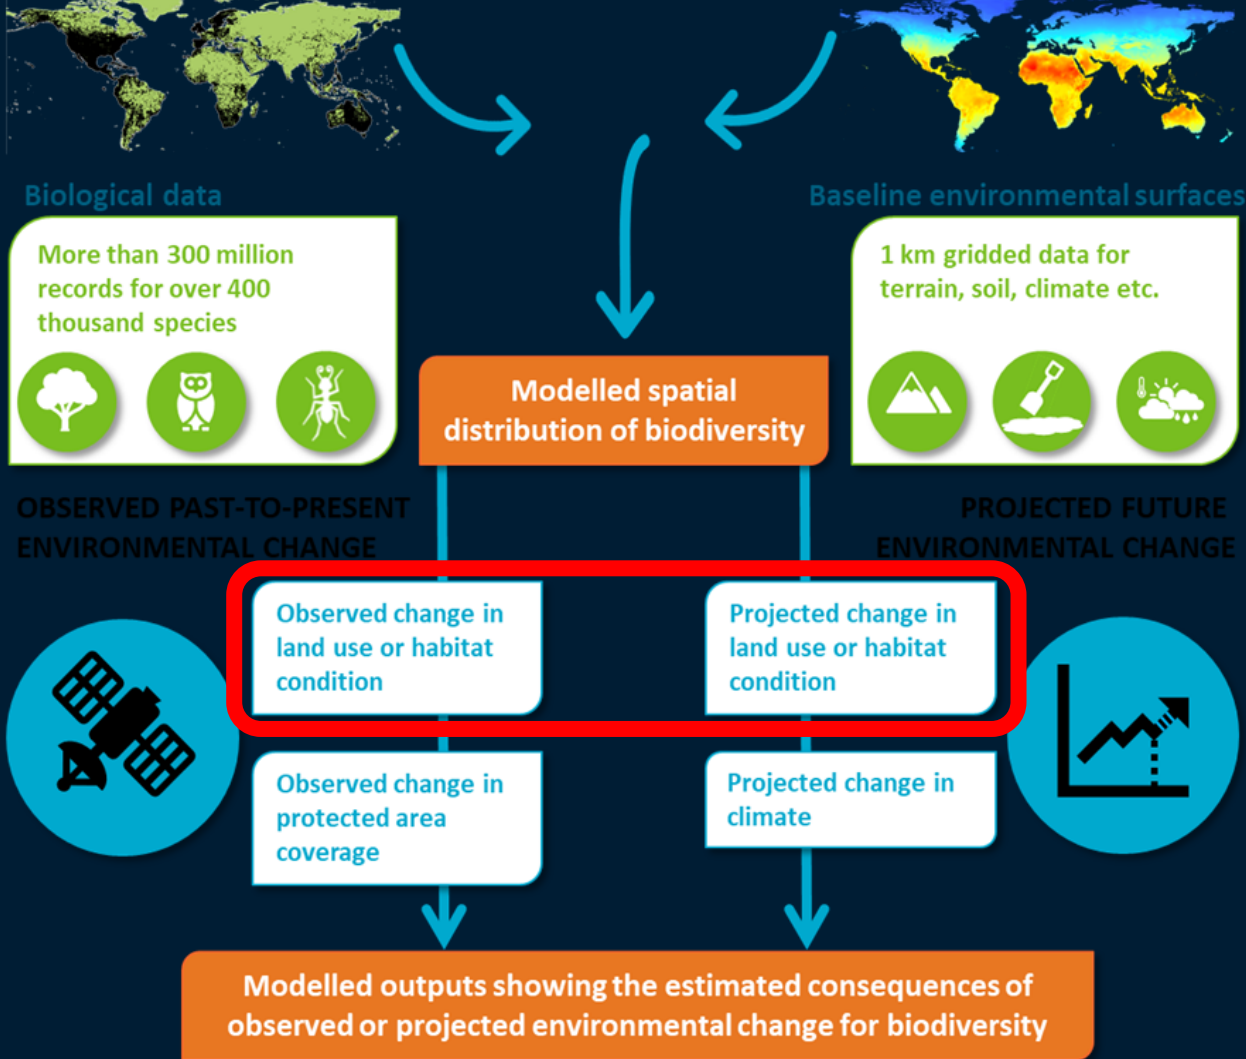

# BIB

# BIBL

# BILBI – assessments for developments

Single project  
scoping / planning

Single project  
assessment

Identify & assess  
offsetting actions

Portfolio of  
projects screening

Portfolio impact  
assessment

Enterprise-wide  
accounting (SEEA)

# Spatial location of road development

# Effect on habitat condition

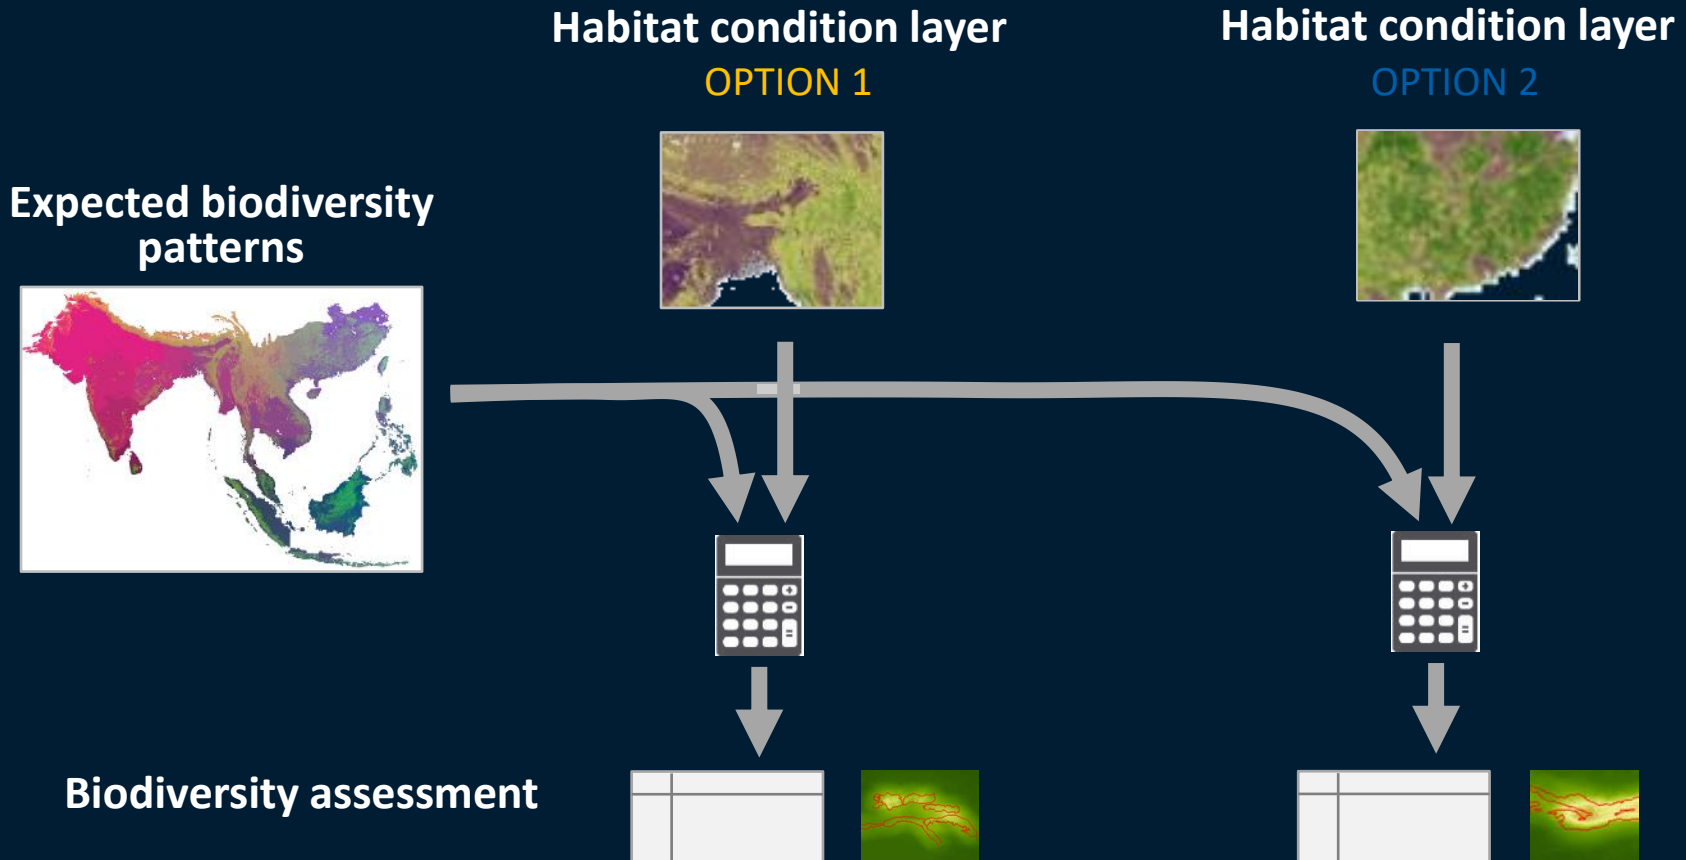

## Direct impacts

## Indirect impacts

# BILBI - assessment

# BILBI – visualising impacts

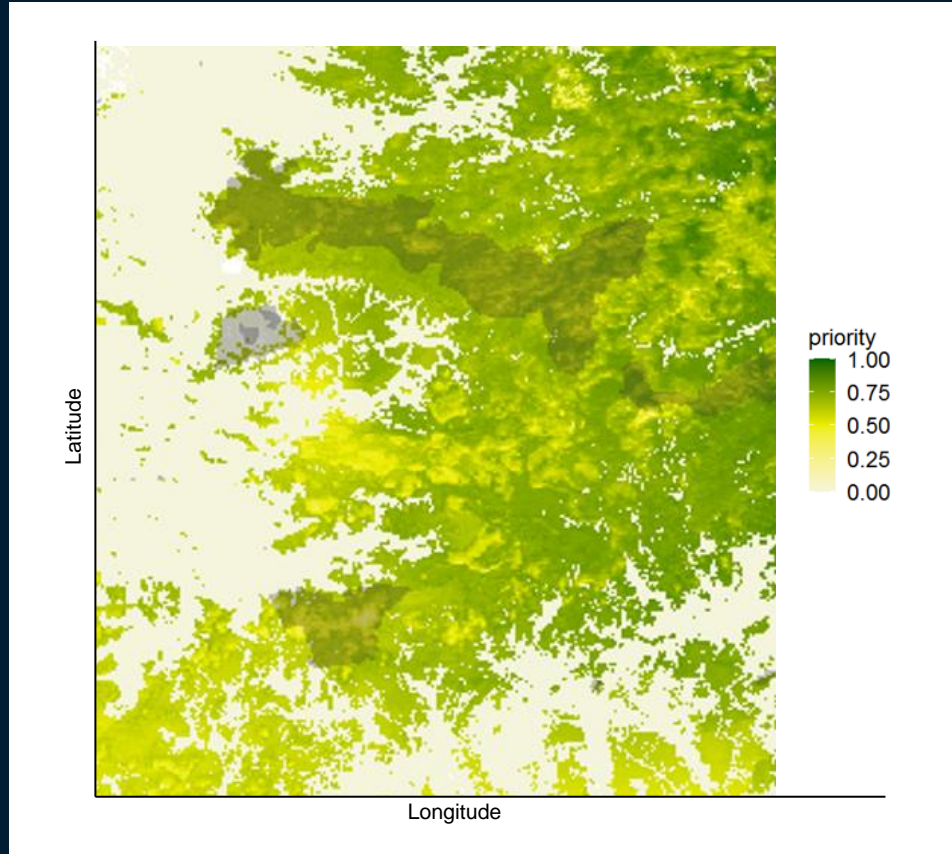

Biological group	Baseline species persistence (%)	Post development species persistence (%)	Change in species persistence	Change in number of species persisting
Invertebrates	71.5385	71.5032	-0.0353	-64.82
Plants	71.9374	71.9003	-0.0371	-3.79
Vertebrates	71.9274	71.8925	-0.0349	-0.51
All	71.7493	71.7145	-0.0348	-67.45

# Identifying priority habitat for protection

# Benefits for transport infrastructure development

Rapid single project assessment

Easily compare alternatives for a project  
(e.g. location, configuration)

Ongoing outcome monitoring  
(for single projects, or multiple projects  
in combination)

Account for the cumulative impacts of all  
development actions within a region  
(e.g. transport + agriculture)

Analyse a proposed portfolio of  
transport developments  
(e.g. for a country or region)

# A sustainable & biodiverse future

## Smart decisions - harnessing best available information and tools

Ecosystem services and nature's benefits to people are dependent on a wide-range of biodiversity.

Assessment approaches that account for a wide range of biodiversity can complement species-based approaches to provide a more complete picture of impacts.

Modelling tools that predict how biodiversity might change in response to development activities can assess alternatives and help decision-makers identify options that create better outcomes for biodiversity.

Thank you.
