EPA Biogas Tools Overview

**ADB Circular Economy Working Group
Webinar Series**
20 October 2022

Nick Elger
Program Manager, AgSTAR Program and
the Global Methane Initiative

Presentation Overview

- Introduction to EPA and Global Methane Initiative's Biogas Work
- Overview of Biogas Tools and Resources
- Opportunities for Collaboration
- Q & A and Discussion

Global Methane Initiative (GMI)

- GMI is an international public-private partnership launched in 2004 that advances cost-effective near-term methane reductions
- As a founding member, the **United States** provides in-kind support through the **U.S. Environmental Protection Agency (EPA)**:
 - Provides technical support to deploy methane-to-energy projects around the world
 - Develops and maintains resources for Partner Countries and Project Network members
- GMI focuses on **three major sectors**: Biogas, oil and gas, and coal mines

- 46 Partner Countries
- 700+ Project Network members
- Alliances with international organizations focused on methane recovery and use

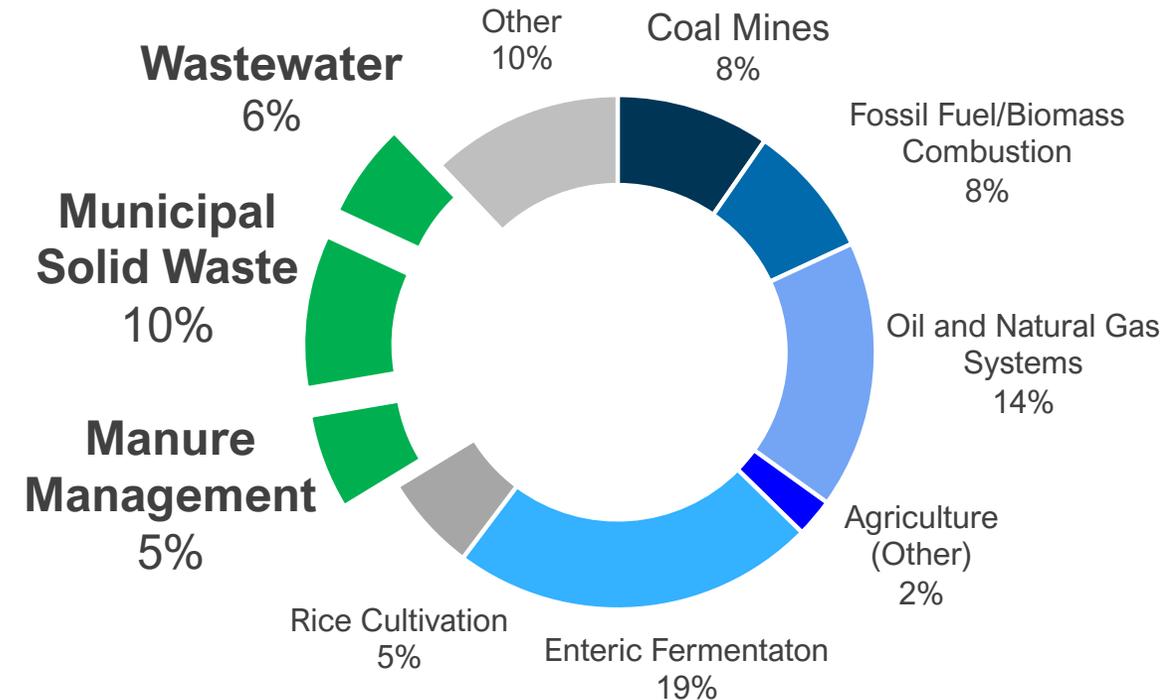

GMI Partner Countries represent approximately 75% of methane emissions from human activities.

Role of Biogas Sector in Meeting Paris Goals

- Approximately 21% of anthropogenic methane emissions are from the biogas sector (agriculture, municipal solid waste, wastewater)
- Countries are beginning to include methane mitigation and biogas strategies in National Planning and Nationally Determined Contributions (NDCs).

**2030 Projected Global Non-CO₂ Emissions
(14,031 MMTCO₂E Total)**

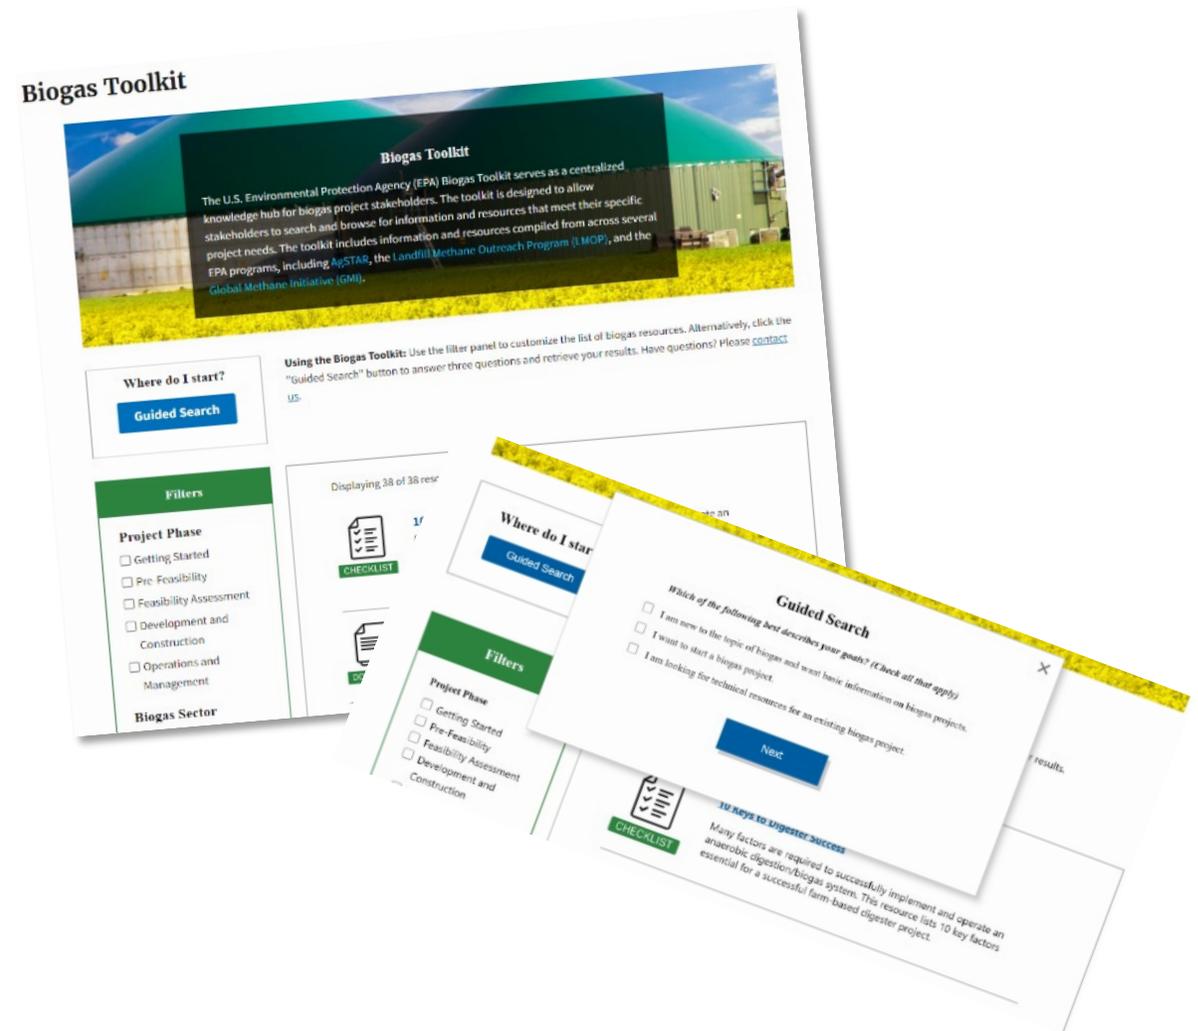

EPA Biogas Tools and Resources

EPA Biogas Toolkit

- Centralized location for 38 tools and resources to facilitate biogas project development
- Roadmap for planning and implementing biogas projects and quantifying economic and environmental impacts
- **Audience:** Project implementers, developers, financiers, and policymakers
- **Highlights:**
 - Appropriate for all knowledge levels
 - Guided search feature enables users to find exactly what they need

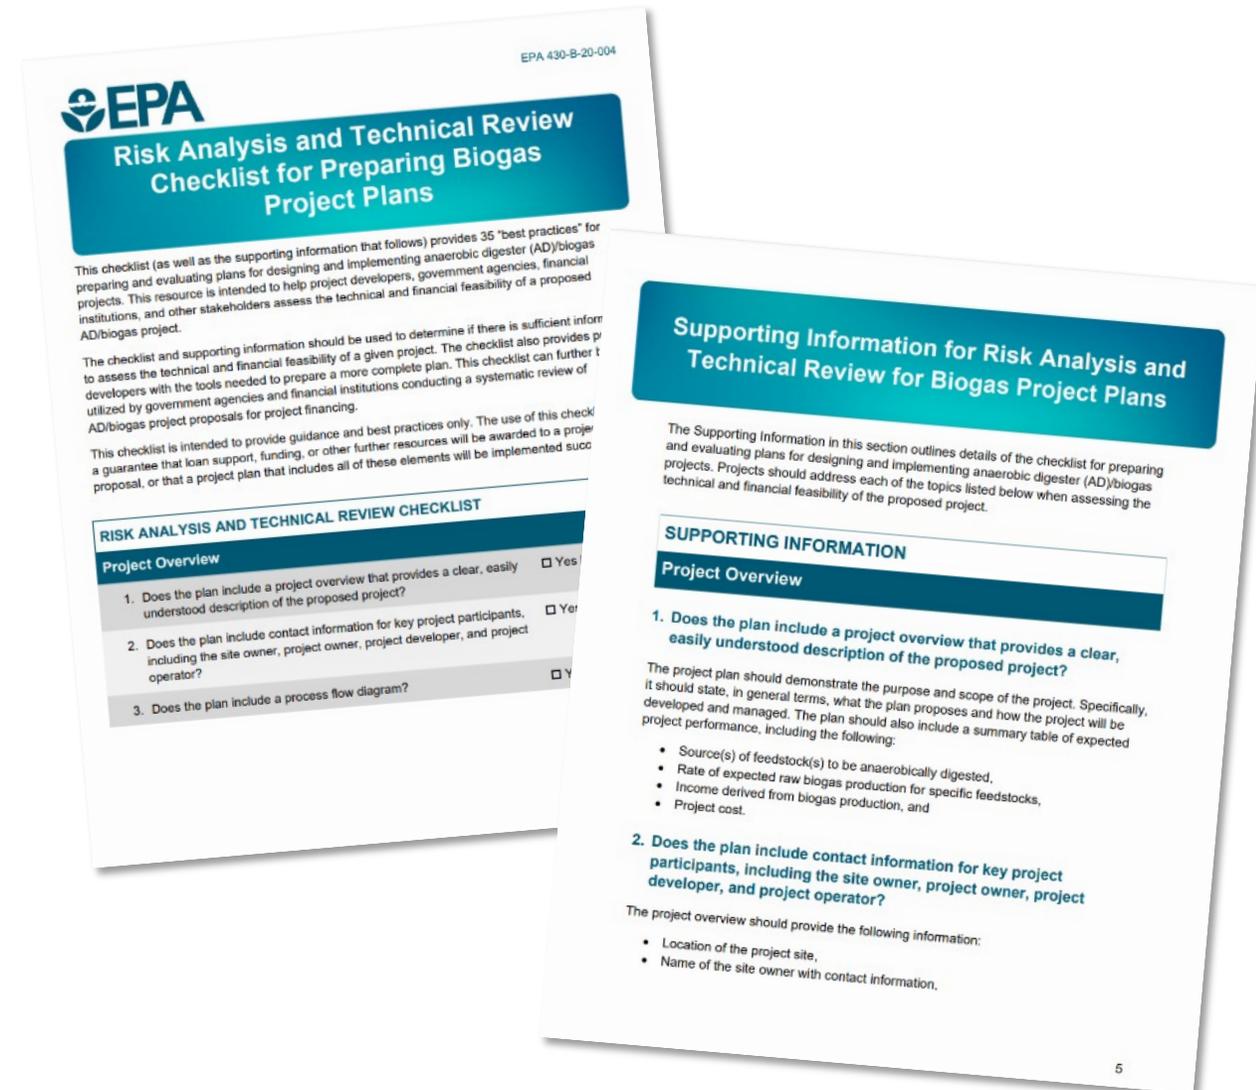

Financial Readiness Resources for Biogas Projects

Risk Analysis and Technical Review Checklist for Preparing Biogas Project Plans

- A guide for assessing the technical and financial feasibility of a biogas project
- Checklist for project developers to create a more complete project plan, and for government agencies and financial institutions to conduct a systematic review of biogas project proposals for project financing
- 35 best practices for preparing and evaluating plans for designing and implementing biogas projects

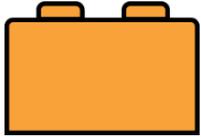

Municipal Solid Waste Financial Readiness Questionnaire

Provides a set of questions to help cities assess their readiness for financing, related to:

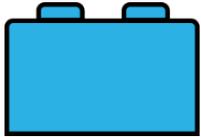

- Political Environment
- Legal Frameworks
- Regulatory Environment
- Revenue Streams
- Financial Modeling & Technical Expertise
- Bidding Process

GMI Biogas Tools

Solid Waste Emissions Estimation Tool (SWEET) version 4.0.2

Quantifies emissions of greenhouse gases and other air pollutants from the municipal solid waste sector

Anaerobic Digestion (AD) Screening Tool version 2.2

Estimates the quantity of biogas and digestate produced by AD systems and methane emissions reductions

Organics Economics (OrganEcs) version 3.1

Estimates costs, revenues, and profitability with composting and AD projects

Landfill Gas (LFG) Screening Tool version 3.0

Estimates LFG recovery rate and provides potential project type and size

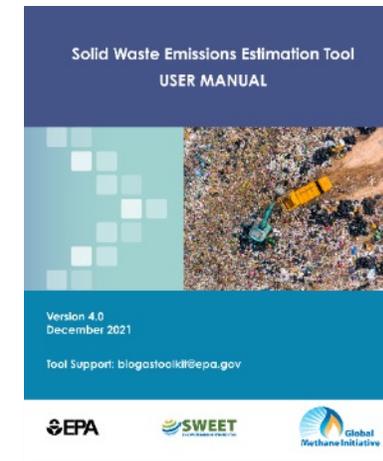

Solid Waste Emissions Estimation Tool (SWEET) Overview

What is SWEET?

- **Excel-based tool** for quantifying pollutant emissions from sources across the waste sector
 - Project-, source-, or system-level emissions estimates
 - Methane, black carbon, particulate matter, and other pollutants
- **Increasing usage** among audience
 - Used in 50+ cities to date
 - Adopted by the International Solid Waste Association's Closing Dumpsites campaign
 - Incorporated into the United Nation's Habitat's Waste Wise Cities Tool
 - Used by World Health Organization as part of Urban Health Initiative

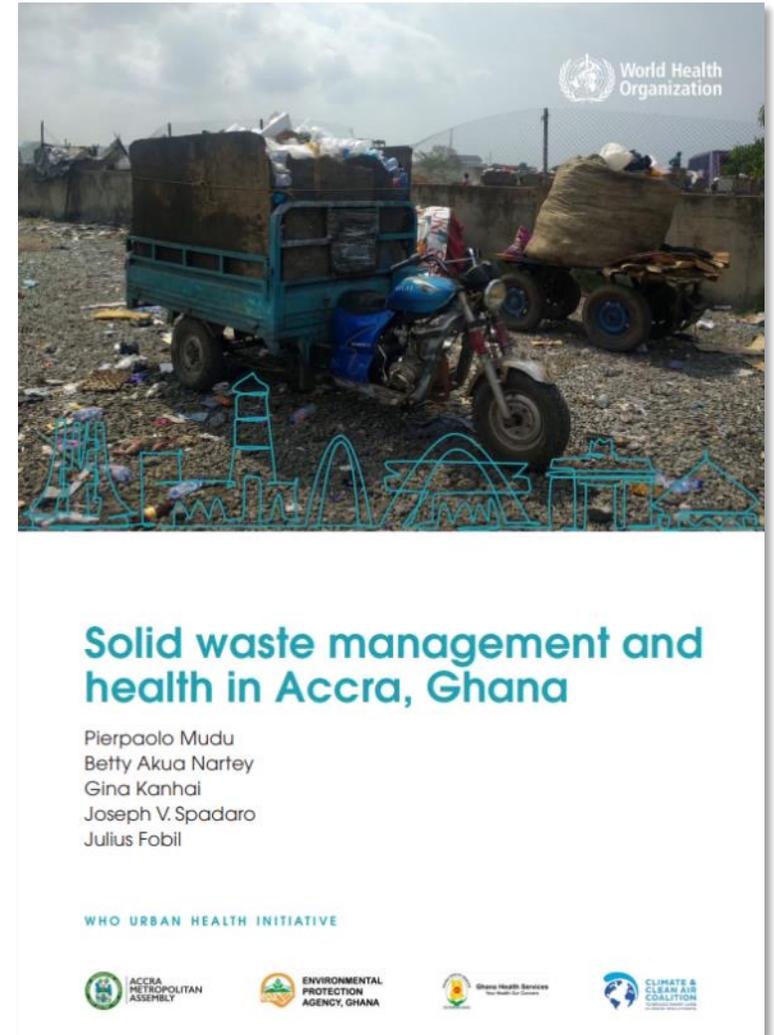

"SWEET can be considered a policy planning tool that requires less data input than the usual life cycle assessment-based tools."
World Health Organization

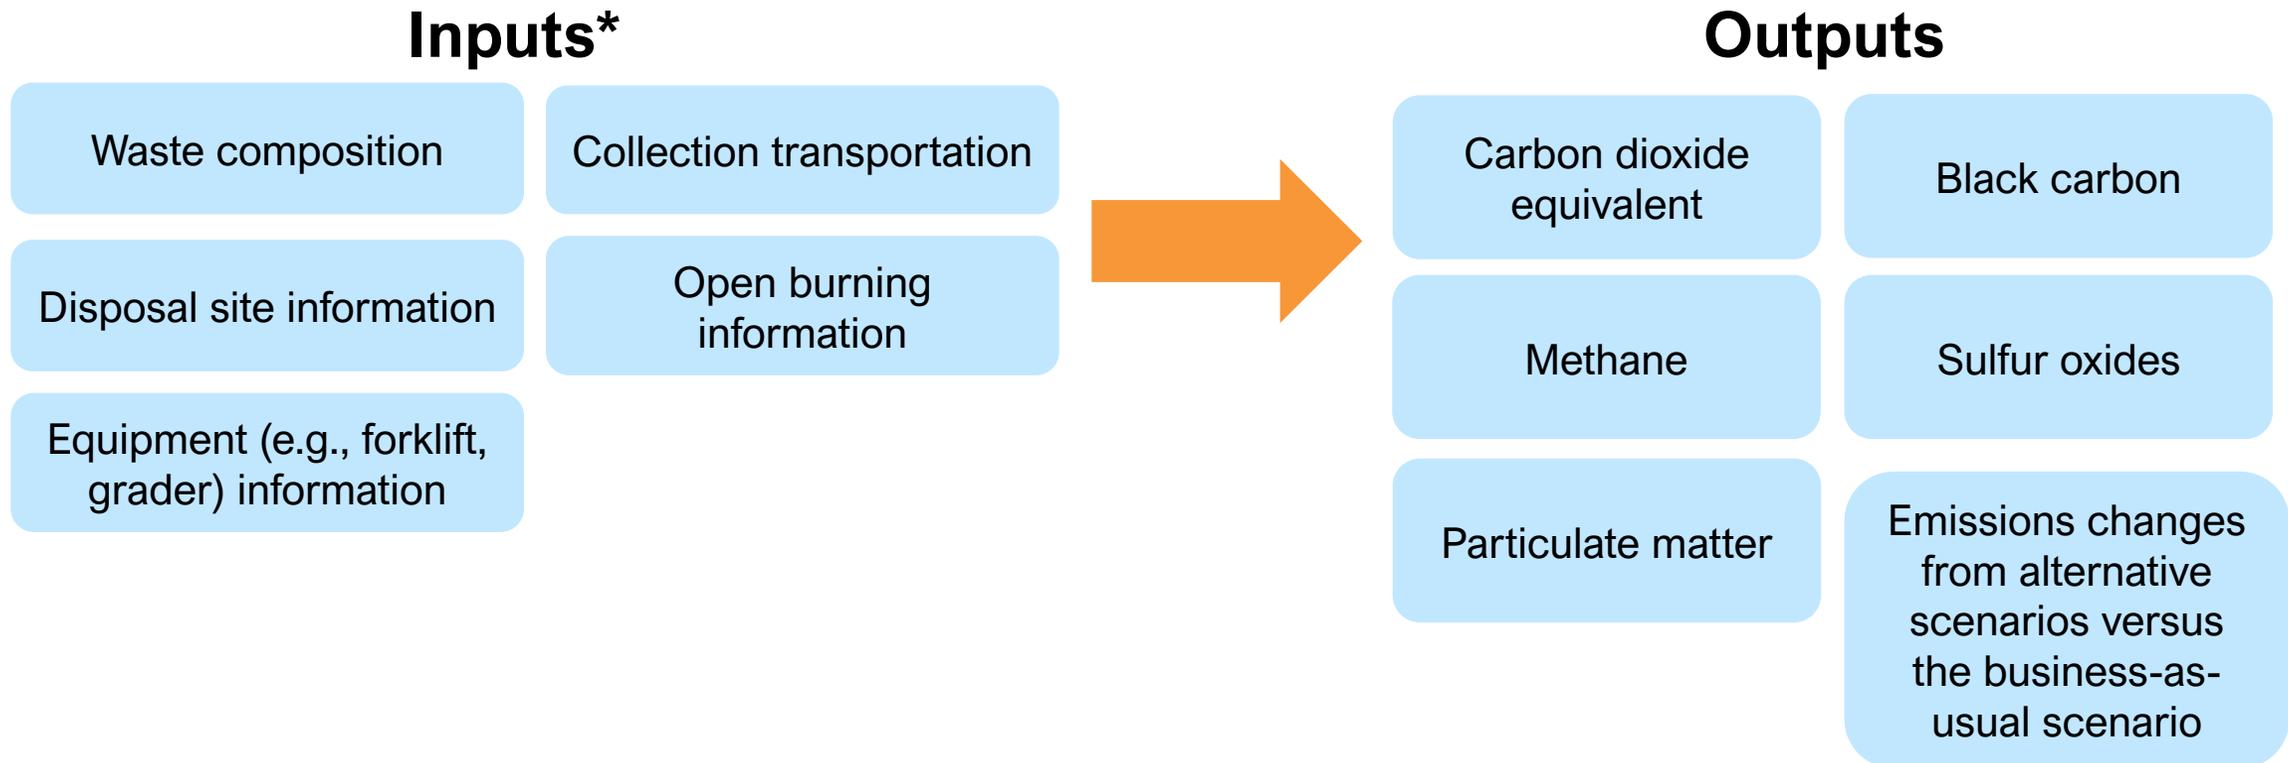

Example SWEET Applications

- Creating municipal GHG inventories
- Establishing emissions baselines
- Comparing policy and project choices for handling municipal waste
- Justifying waste management projects for grant funding or financing
- Supporting quantification of public health impacts of waste management choices
- Measuring, reporting, and verification of emissions reductions

SWEET Inputs and Outputs

**SWEET provides default values for various inputs, which can be updated by the user*

SWEET Past Uses by World Health Organization

Case Study of Accra, Ghana

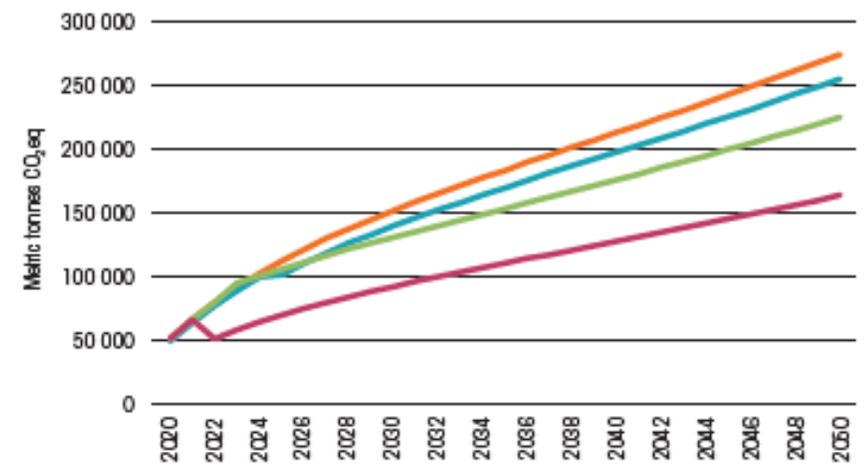

The assessment was conducted using **SWEET & WHO AirQ+ Software**.

The results of this health impact assessment indicate that, based on the emissions of PM2.5 from the waste sector in Accra, a change from the business-as-usual to more sustainable options would reduce air pollutants emissions and **avert 120 premature deaths in 2030**.

Methane (CH₄) emissions are reduced most in the landfill gas capture scenario, with a reduction of 40% compared with the BAU in 2050 (Fig. 4.5) followed by the scenario of increasing recycling and composting with only 18% reduction in the same timeframe.

Fig. 4.5
Scenario comparison of CH₄ emissions over time

- BAU
- Cease open burning
- Increase composting and recycling
- Landfill gas capture

The analysis is described in the following four steps:

1. Collecting data on the waste sector in Accra;
2. Modeling the emissions arising from waste management;
3. Transforming emissions to concentration values; and,
4. Estimating the burdens on health.

Organics Economics (OrganEcs) Tool Overview

What is the OrganEcs tool?

- Two Excel-based tools to estimate the financials of organic waste management projects:
 - Composting
 - Anaerobic digestion
- Primary audience:
 - Local governments
 - Waste professionals
 - Policymakers
 - Facility operators
 - Project developers

OrganEcs – Anaerobic Digestion
Version 3.1
January 2022
Developed by U.S. Environmental Protection Agency

 United States Environmental Protection Agency

 Global Methane Initiative

OrganEcs – Compost
Version 3.0
December 2021
Developed by U.S. Environmental Protection Agency

Lead, International Biogas Programs: Tom Frankiewicz | Frankiewicz.Thomas@epa.gov
Tool Support: biogastoolkit@epa.gov

 United States Environmental Protection Agency

 Global Methane Initiative

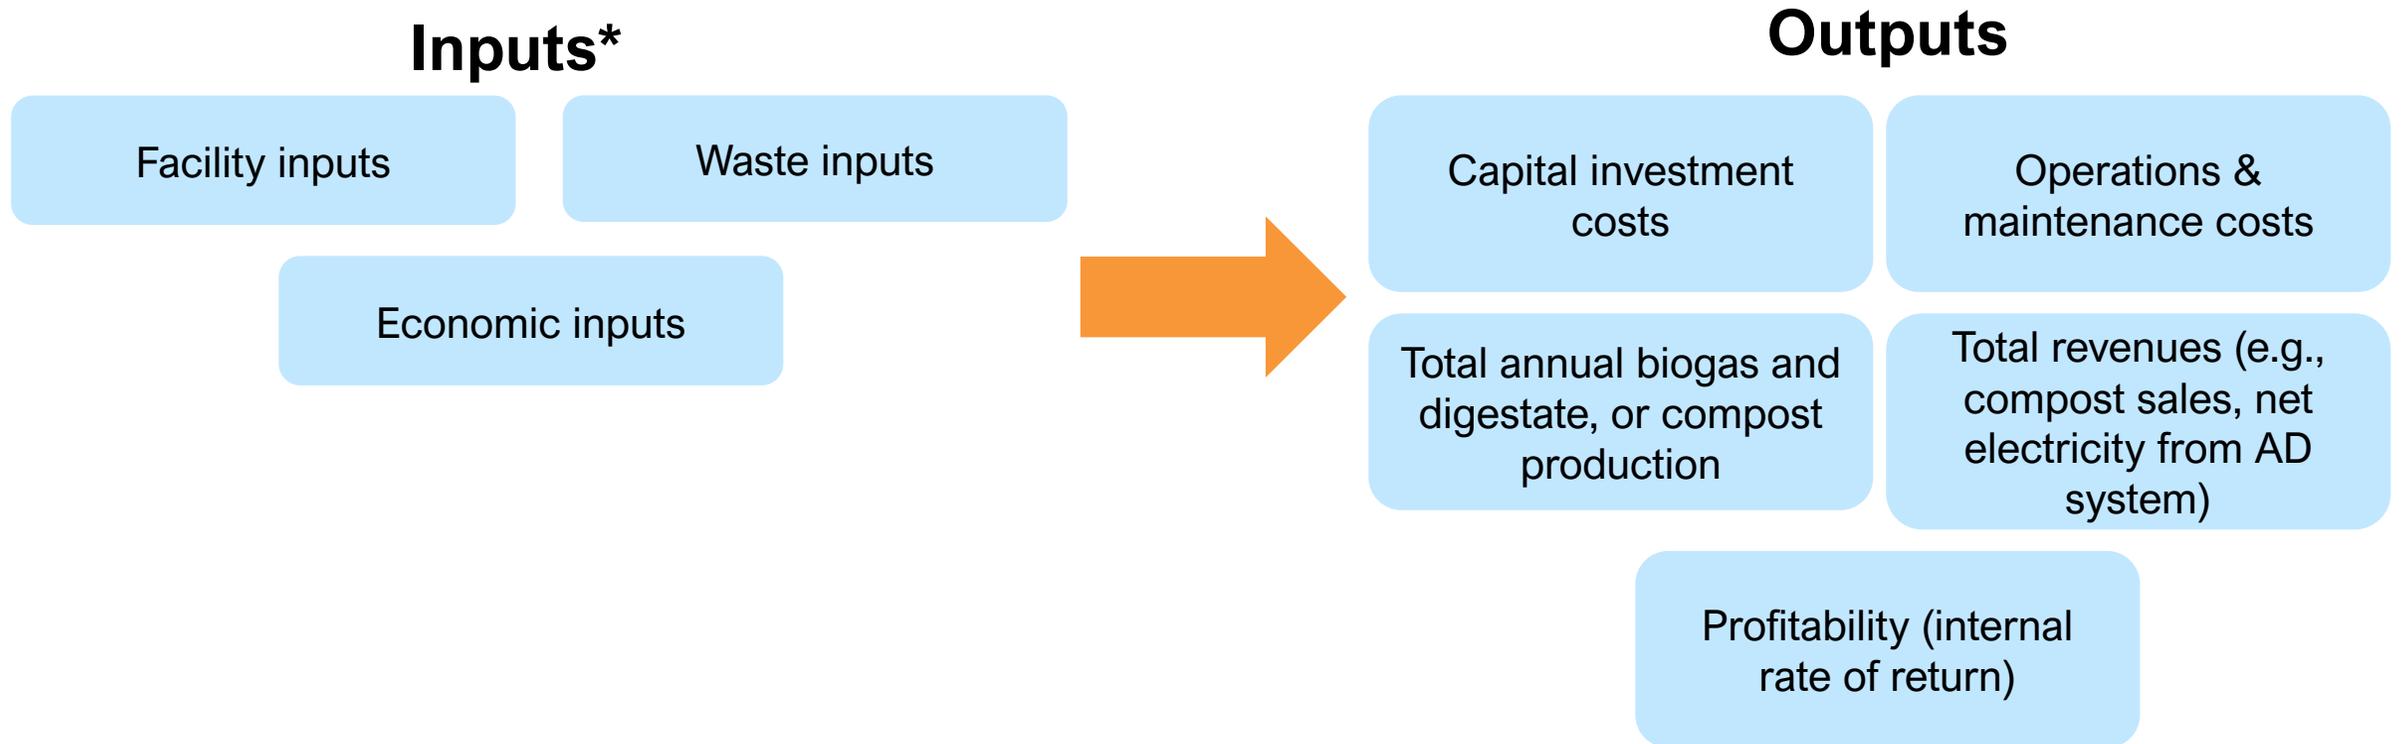

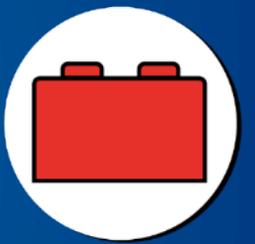

OrganEcs Applications

- Evaluate the **economic feasibility** of a proposed composting or anaerobic digestion project
- Evaluate the effect of gate or tipping fees on **project profitability**
- Evaluate **optimal financial management** of an organics project
- Estimate project **net present value** or **internal rate of return**
- Evaluate the **financial sustainability** of existing composting or anaerobic digestion projects

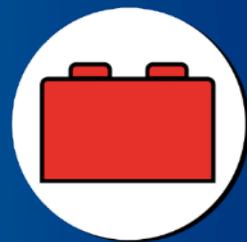

OrganEcs Inputs and Outputs

**OrganEcs provides default values for various inputs, which can be updated by the user*

OrganEcs Past Uses by University of Novi Sad

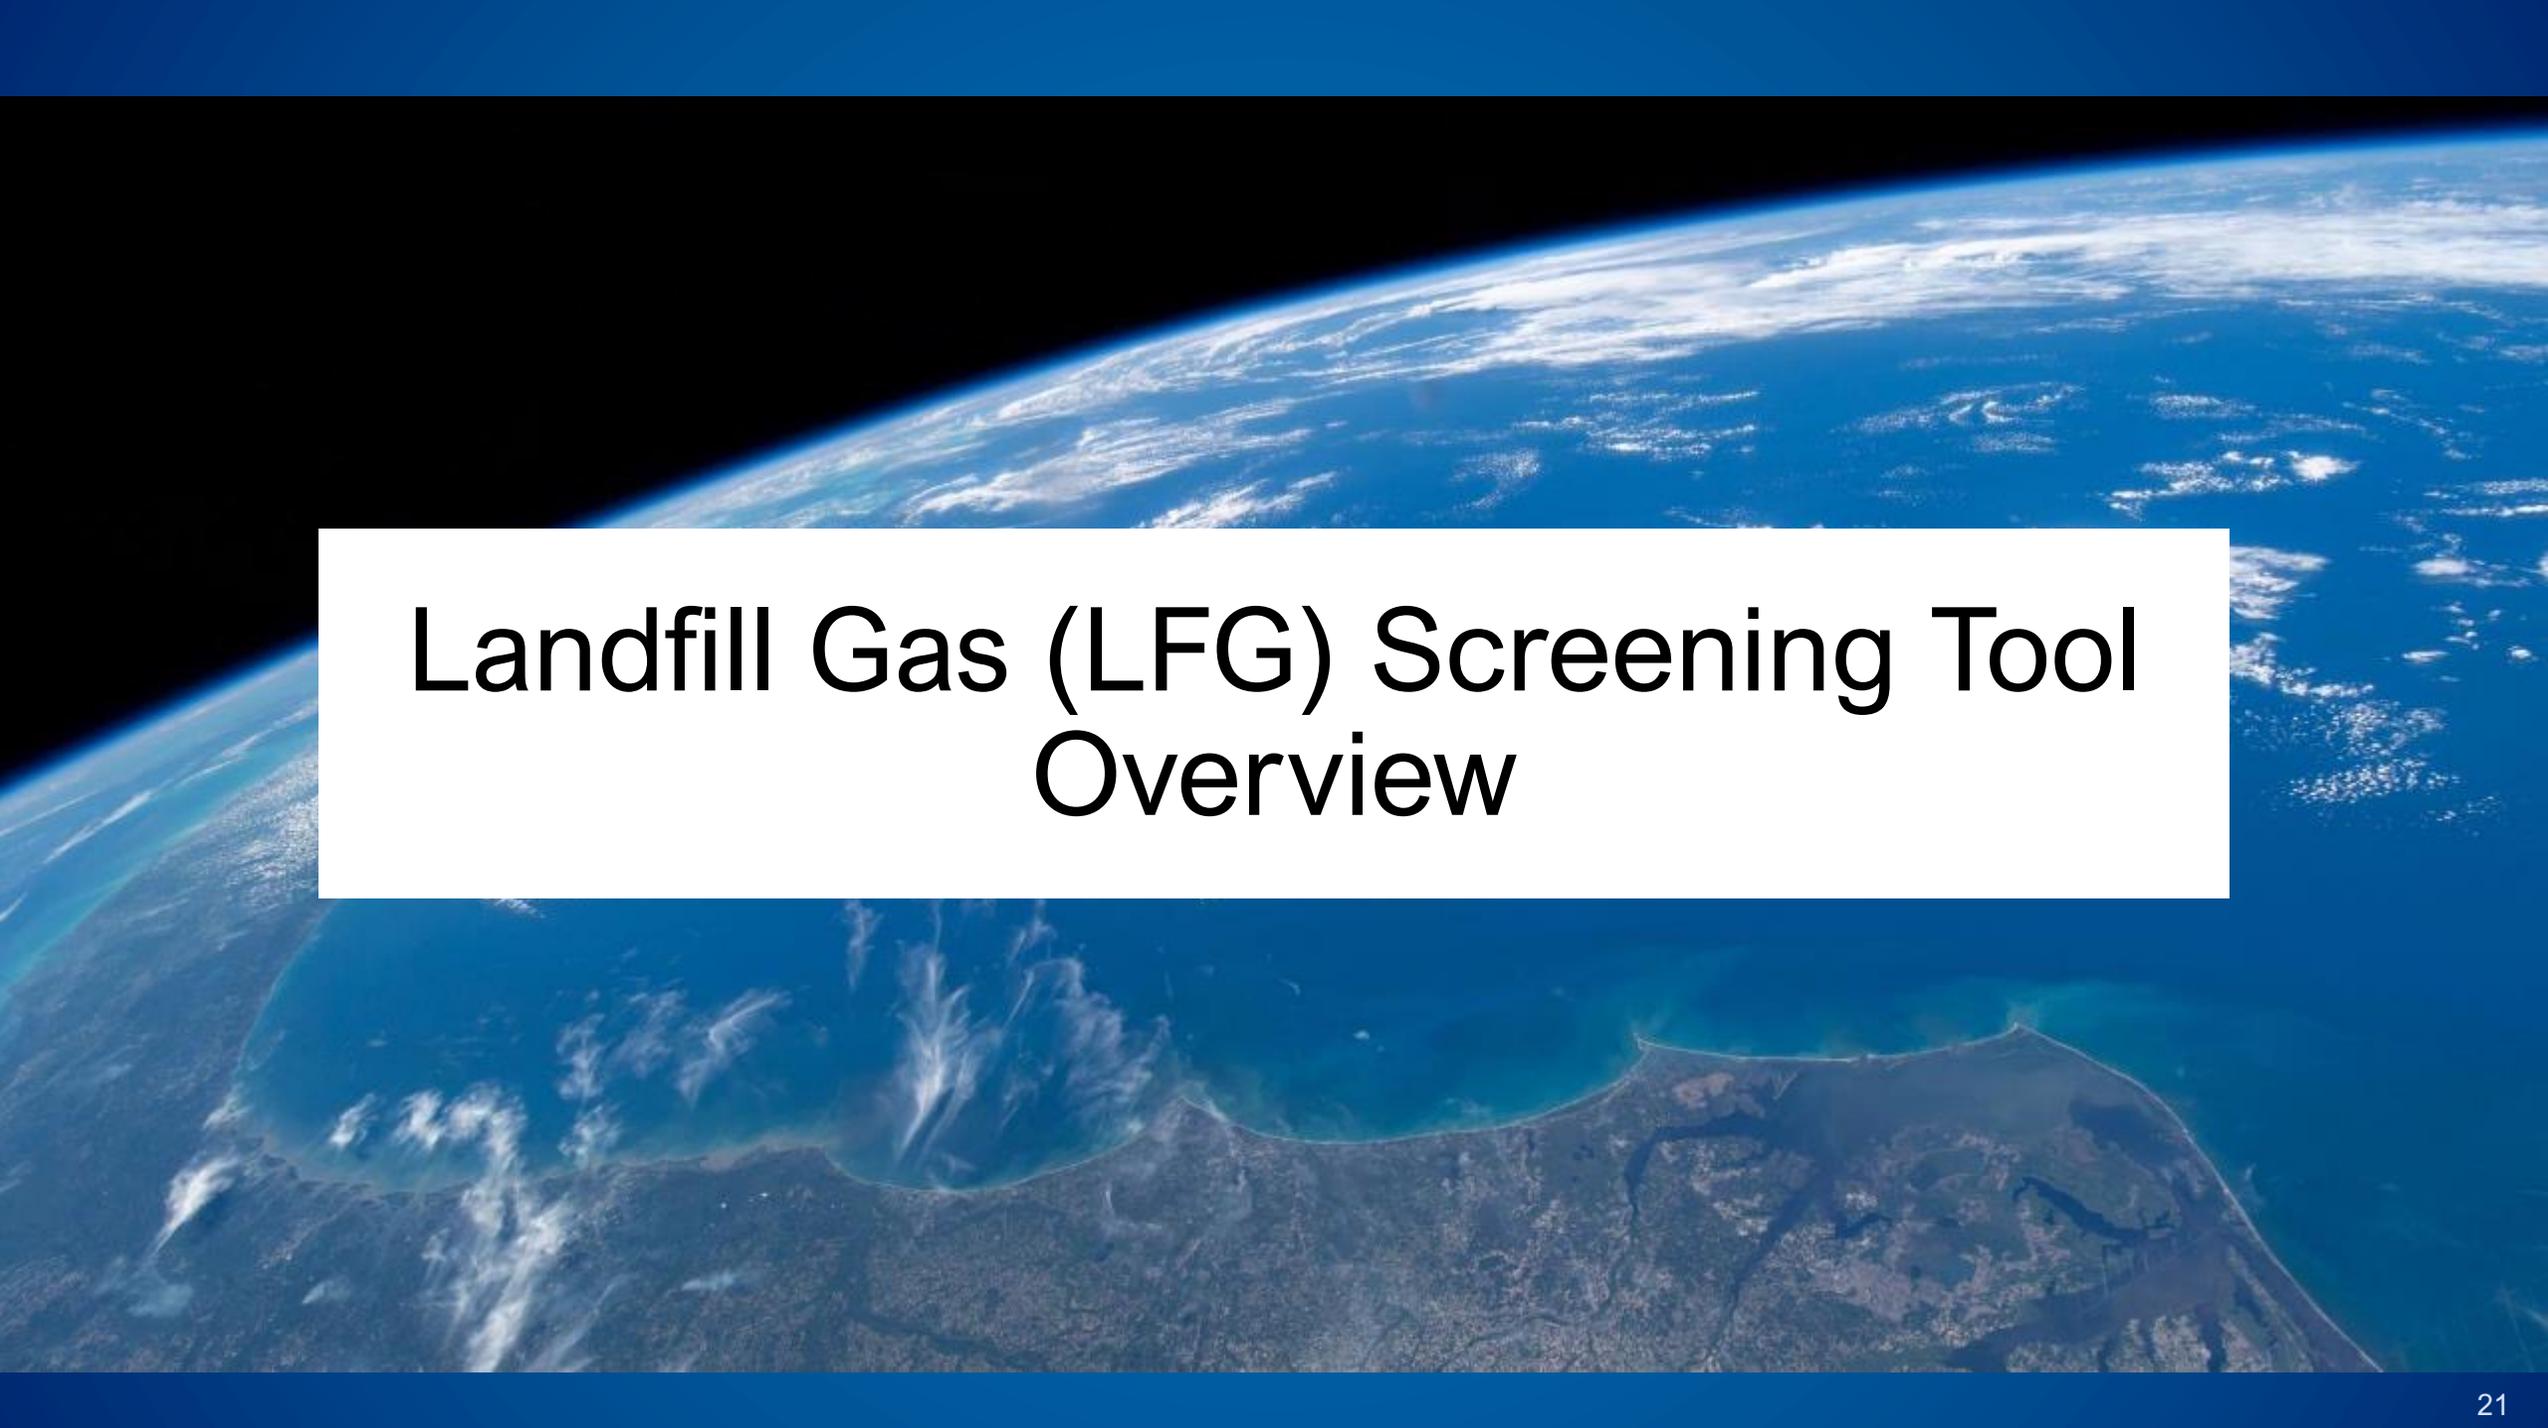

Case Study Establishing a Baseline in Novi Sad, Serbia

- Novi Sad and surrounding municipalities produce approximately 214,000 tons/year (t/year) of MSW, over half of which is organic.
- EPA team used OrganEcs to evaluate the financial feasibility of three options for **expanding the existing Novi Sad composting operation**.
- Results:
 - Scenario 2 and 3 estimate total revenues higher than total expenses, suggesting economic viability
 - Gate fees should be \$6/t and \$4/t for Scenarios 2 and 3 respectively for the facility to remain economically viable
 - Revenues from bulk compost sales should be about \$5/t for both Scenario 2 and 3

Table 1: Novi Sad Composting Facility Costs by Scenario

Scenario	Capacity (t/year)	CAPEX (USD)	Operations & maintenance costs per ton in year one
Scenario 1 – <i>Green waste</i>	5,528	\$806,700	\$36
Scenario 2 – <i>Green and garden waste</i>	15,384	\$1,578,700	\$30
Scenario 3 – <i>Green waste, garden waste and food waste from commercial sector</i>	41,467	\$3,025,500	\$30

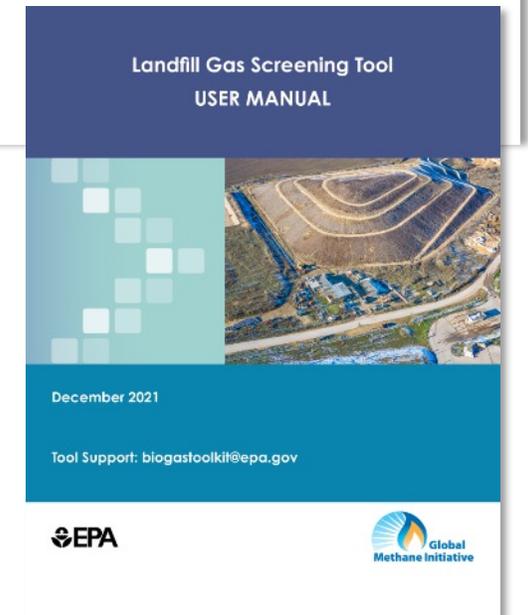

Landfill Gas (LFG) Screening Tool Overview

What is LFG Screening Tool?

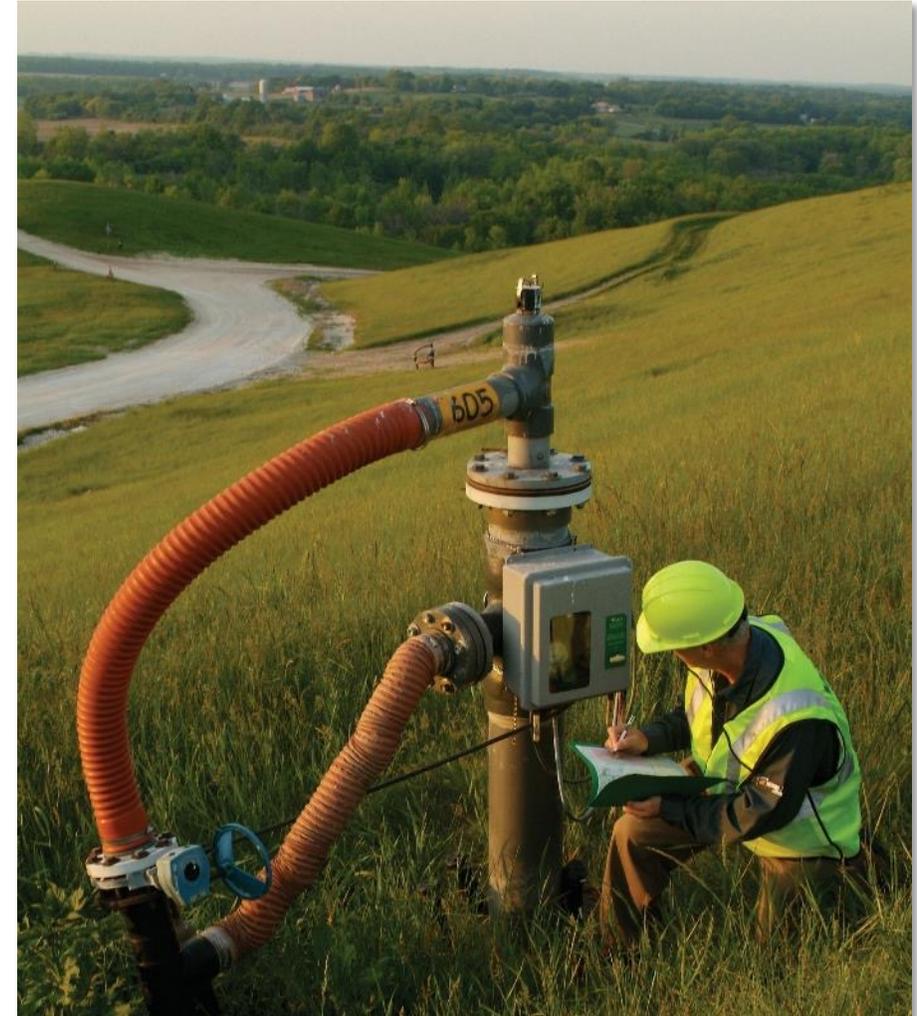

- Excel-based screening tool to assess the potential feasibility of landfill gas (LFG) to energy projects
 - Estimates LFG recovery rate
 - Provides potential project type and size
- Primary audience:
 - Landfill/dumpsite operators
 - Project developers

LFG Screening Tool Applications

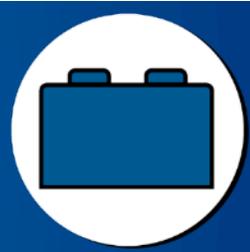

- Generate a preliminary estimate of how much landfill gas (LFG) a site could collect
- Determine whether biogas production is likely sufficient to support a modest-sized landfill gas-to-energy project
- Determine what type of landfill gas-to-energy project would be most

Source: Waste Management

LFG Screening Tool Inputs and Outputs

Inputs

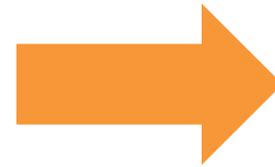

Opening Year of Disposal Site

Closing Year of Site (Actual or Projected)

Annual Disposal Rate (Metric Tons/Year)

Climate

Landfill Category (I.e., dump site, controlled dump site/landfill, sanitary landfill)

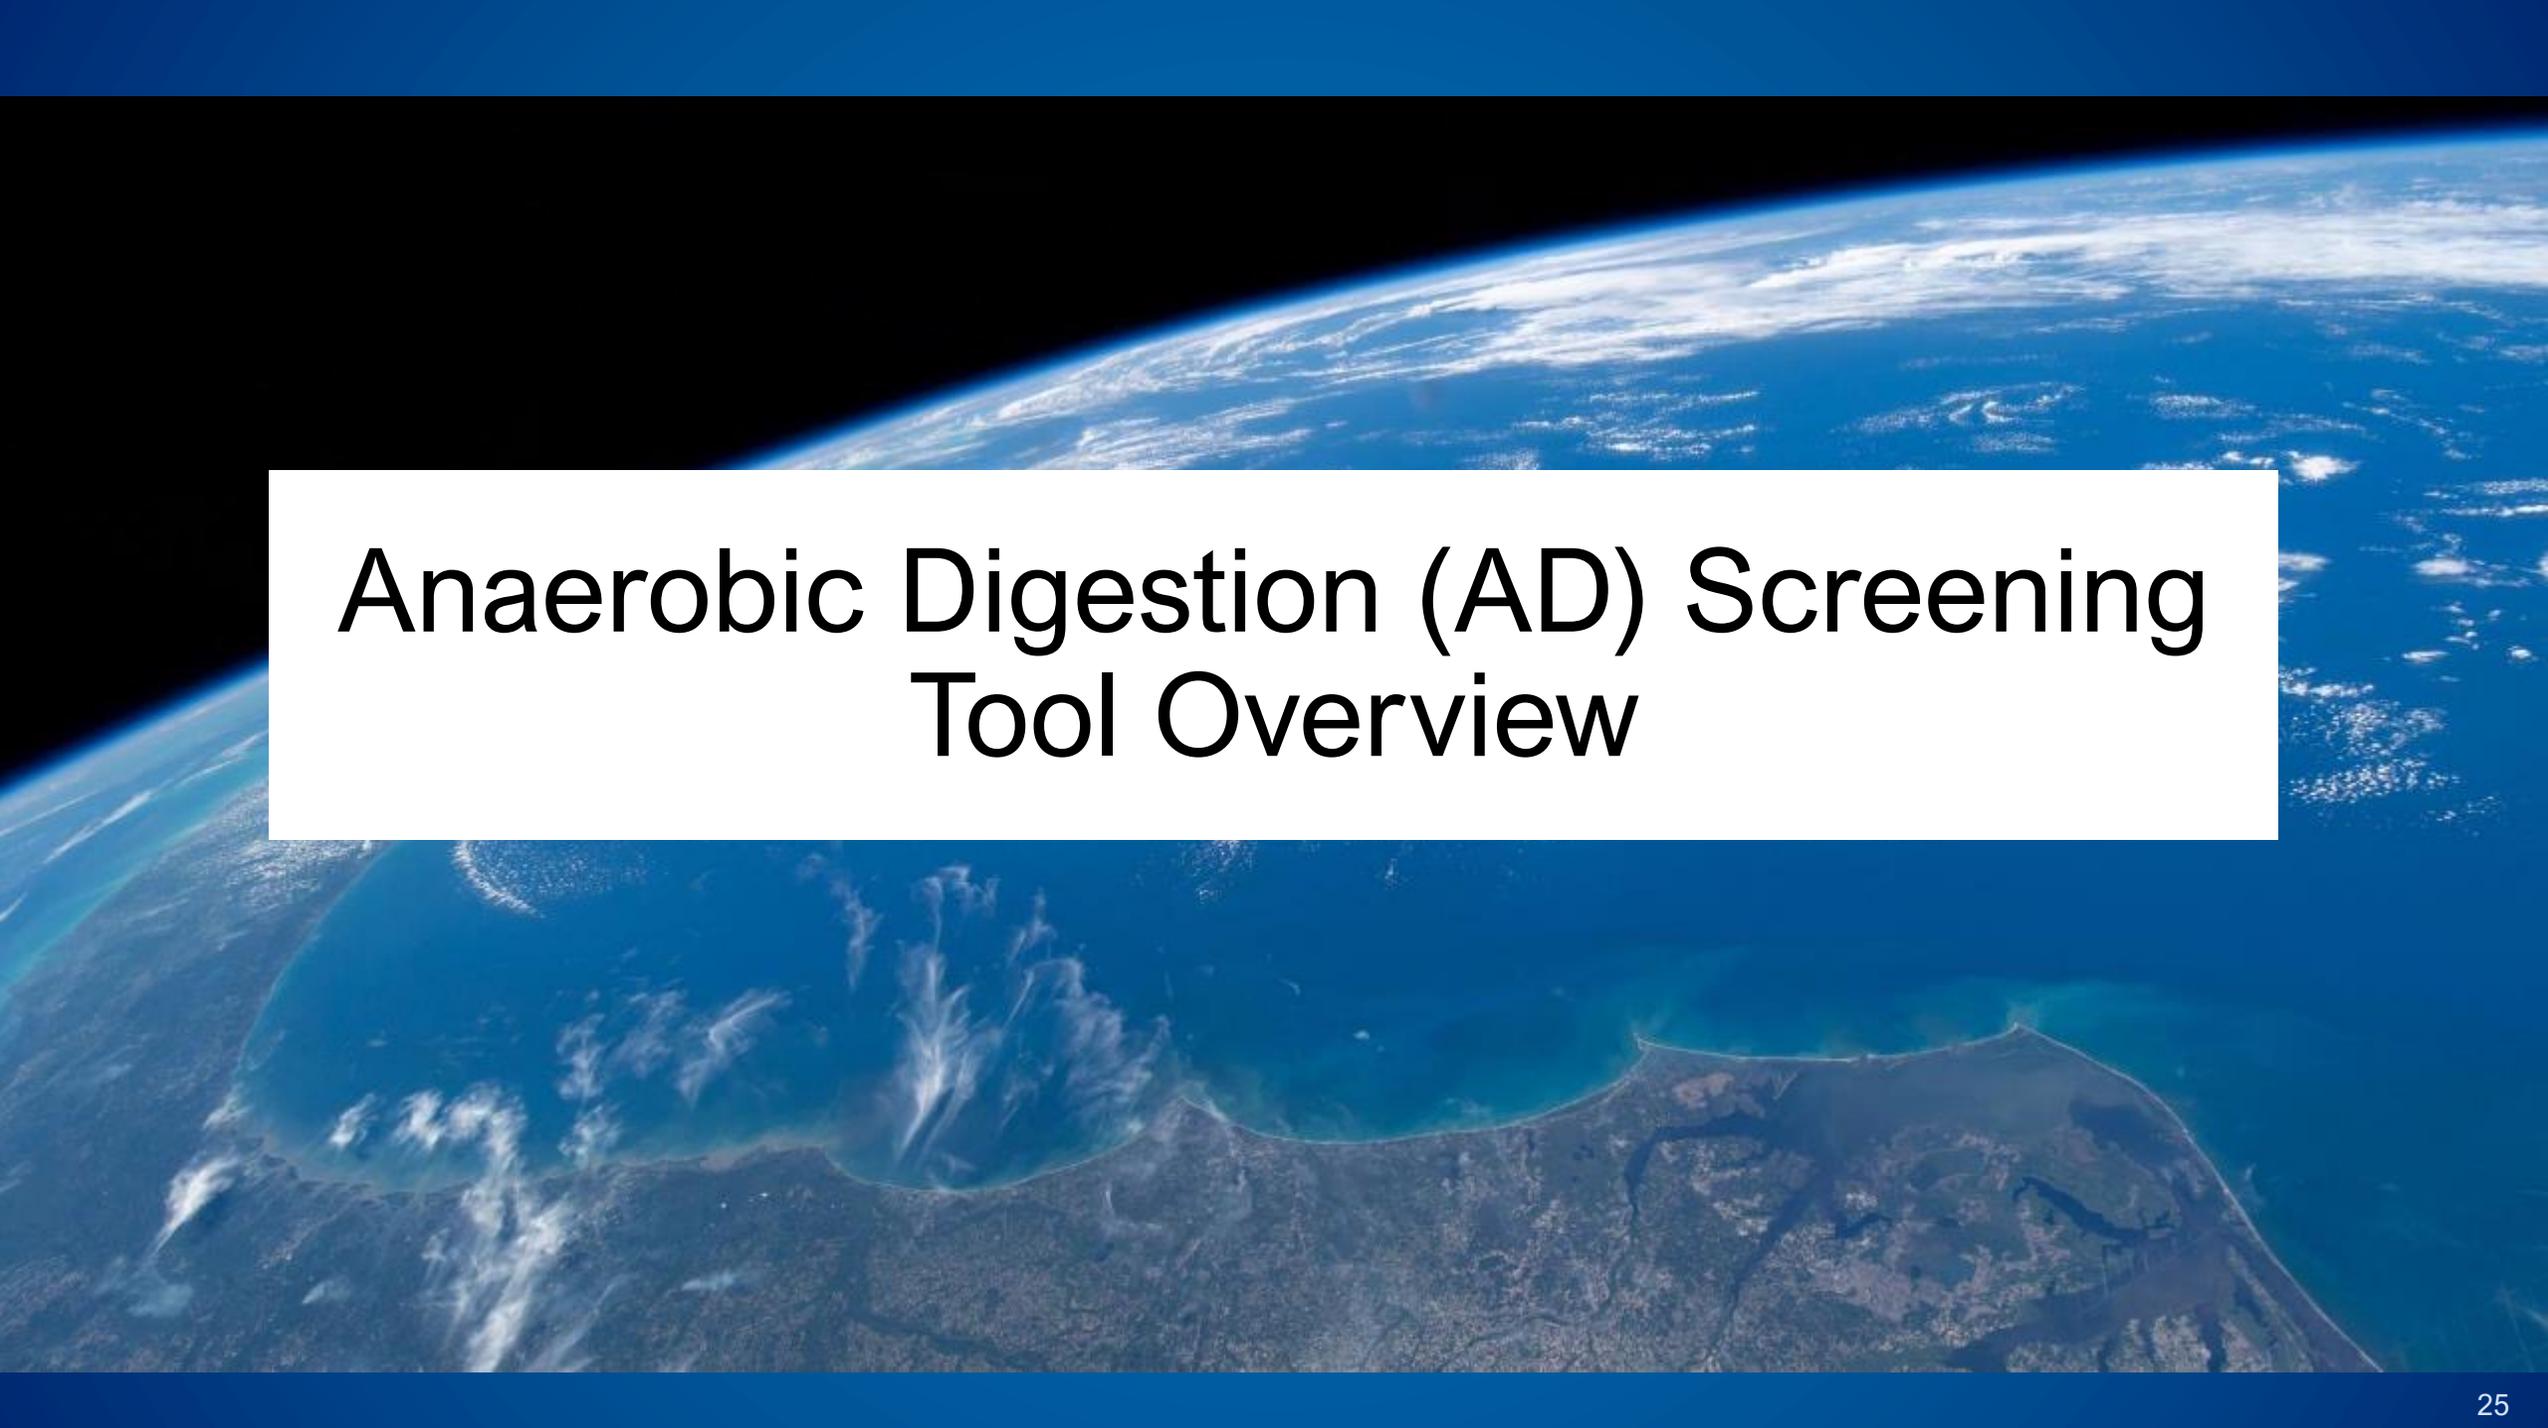

Outputs

Estimated LFG Recovery Rate (m³/h)

Feasible Project Types, based on LFG Recovery Rate

Feasible Project Sizes, Based on LFG Recovery Rate

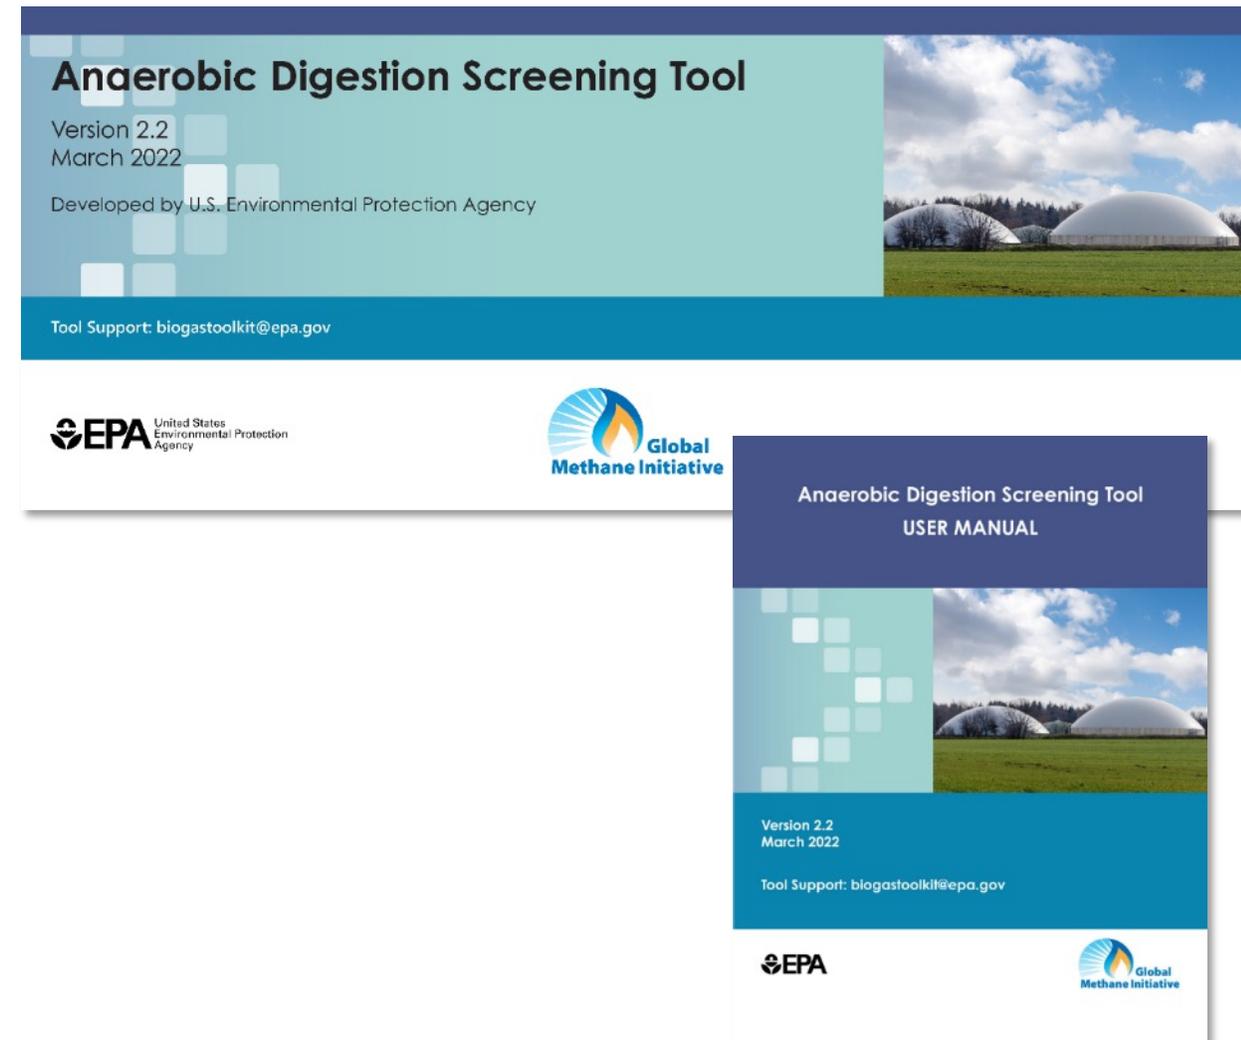

An aerial photograph of Earth from space, showing a curved horizon with a blue ocean and a brownish-green landmass. The image is used as a background for the title slide.

Anaerobic Digestion (AD) Screening Tool Overview

What is the AD Screening Tool?

- Excel-based screening tool to assess the potential feasibility of an anaerobic digestion project
- Primary audience:
 - Project proponents to understand the biogas potential of a proposed project
 - Lending institutions/banks to determine if a project application is feasible

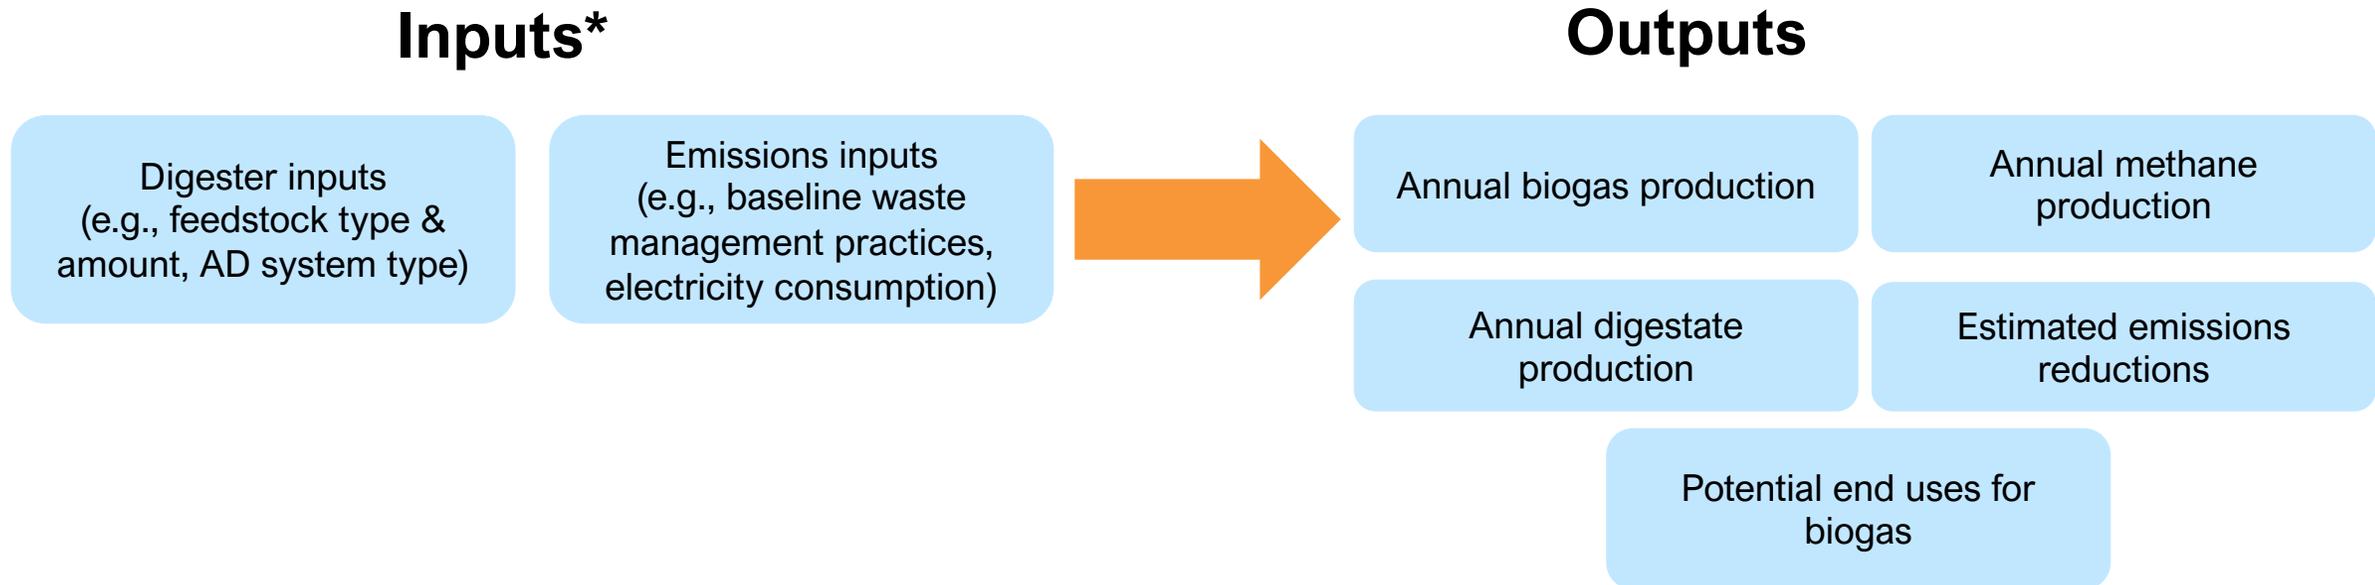

AD Screening Tool Applications

- Project implementers can:
 - Estimate **biogas and digestate production potential** from a variety of feedstocks
 - Evaluate **end uses** like electricity, RNG, and cooking gas
 - Estimate **emissions reductions**
- Financial institutions can assess **project viability and risks**
- Project developers, analysts, and local stakeholders can calculate **emissions reductions** to justify climate goals

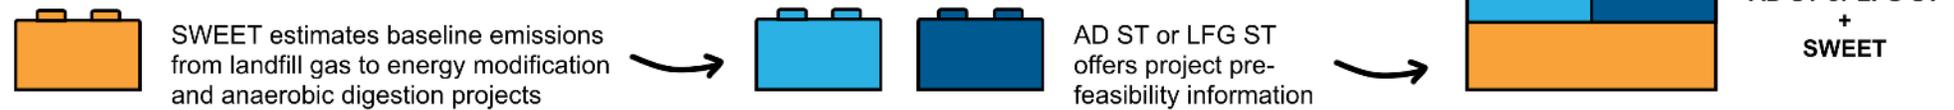

AD Screening Tool Inputs and Outputs

**AD Screening Tool provides default values for various inputs, which can be updated by the user*

Measurement, Reporting, and Verification (MRV) Resources for Biogas Sector

MRV Handbook

- **High-level resource** on guiding principles for conducting emissions MRV for the biogas sector
- **Support decision-makers** in incorporating project-level MRV into national-level frameworks and objectives
- **Scope:**
 - **Biogas sector**, including agriculture, municipal solid waste, and wastewater
 - **Project-level activities** (e.g., anaerobic digestion projects and landfill gas projects) rather than broader-scale MRV
- **Approach:** Technical guidance and tools from existing protocols (e.g., IPCC, EPA AgSTAR, California Air Resources Board) and knowledge from an expert review process

MRV Resource Center

- Centralized location of all GMI MRV resources
- Multi-sector information for agriculture, waste, oil and gas, and coal mines MRV
- Background information on what MRV is, when to use MRV frameworks, why MRV of methane matters

Measurement, Reporting and Verification (MRV) of Methane

A resource center providing information and tools to support the MRV of methane emissions and emissions reductions.

On this page:

- What is MRV?
- When to use MRV Frameworks
- Why MRV of Methane Matters
- Best Practices and Resources

Visit MRV guidance by sector:

- Biogas Sector (Municipal Solid Waste, Agriculture, Municipal Wastewater)
- Oil & Gas Sector
- Coal Mines Sector

What is MRV?

MRV frameworks offer systematic approaches to accounting for greenhouse gas (GHG) emissions and emissions reductions. MRV is an ongoing process that is repeated throughout the life of a project—often annually. The three components of an effective MRV framework include:

Measurement
Measurement is the tracking and documentation of data and information on GHG emissions and emissions reductions.

Reporting
Reporting entails the dissemination of measured GHG emissions and emissions reduction data and project or facility information using standardized methods and formats.

Verification
Verification is an independent assessment of reported GHG emissions and emissions reductions. It is typically undertaken by an independent, third-party verification body to ensure impartial assessment.

MRV Resource Center Applications

- Learn about the benefits of biogas project MRV in developing national inventories and enhancing mitigation targets in NDCs
- Review the best practices for the biogas sector MRV
- Access MRV tools and resources for the biogas sector (previously discussed)
- Access other MRV Resources from the World Resources Institute, United Nations Framework Convention on Climate Change, etc.

Potential Areas for Collaboration

Areas for Collaboration

Type of Support

Past Examples

Needs Assessments

- Engage stakeholders and identify priorities
- Develop a work plan specific to stakeholder needs

- Developed a work plan to mitigate short-lived climate pollutants from the waste sector in East Delhi

Technical Support

- Leverage GMI/EPA tools to identify and evaluate biogas projects
- Conduct feasibility and technical analyses of biogas projects

- Conducted a pre-feasibility study on establishing biogas-powered cold storage in rural India for methane mitigation and sustainable food systems. The study used the OrganEcs and AD Screening Tool

Areas for Collaboration

Type of Support

Past Examples

Workshops,
Trainings,
and
Outreach

- Conduct trainings and workshops on the use of GMI/EPA tools
- Disseminate best practices guides and findings from technical analyses

- In 2020, EPA hosted a workshop on enabling biogas projects in India, which brought together stakeholders to discuss challenges and opportunities in developing biogas projects in the agriculture and solid waste sectors

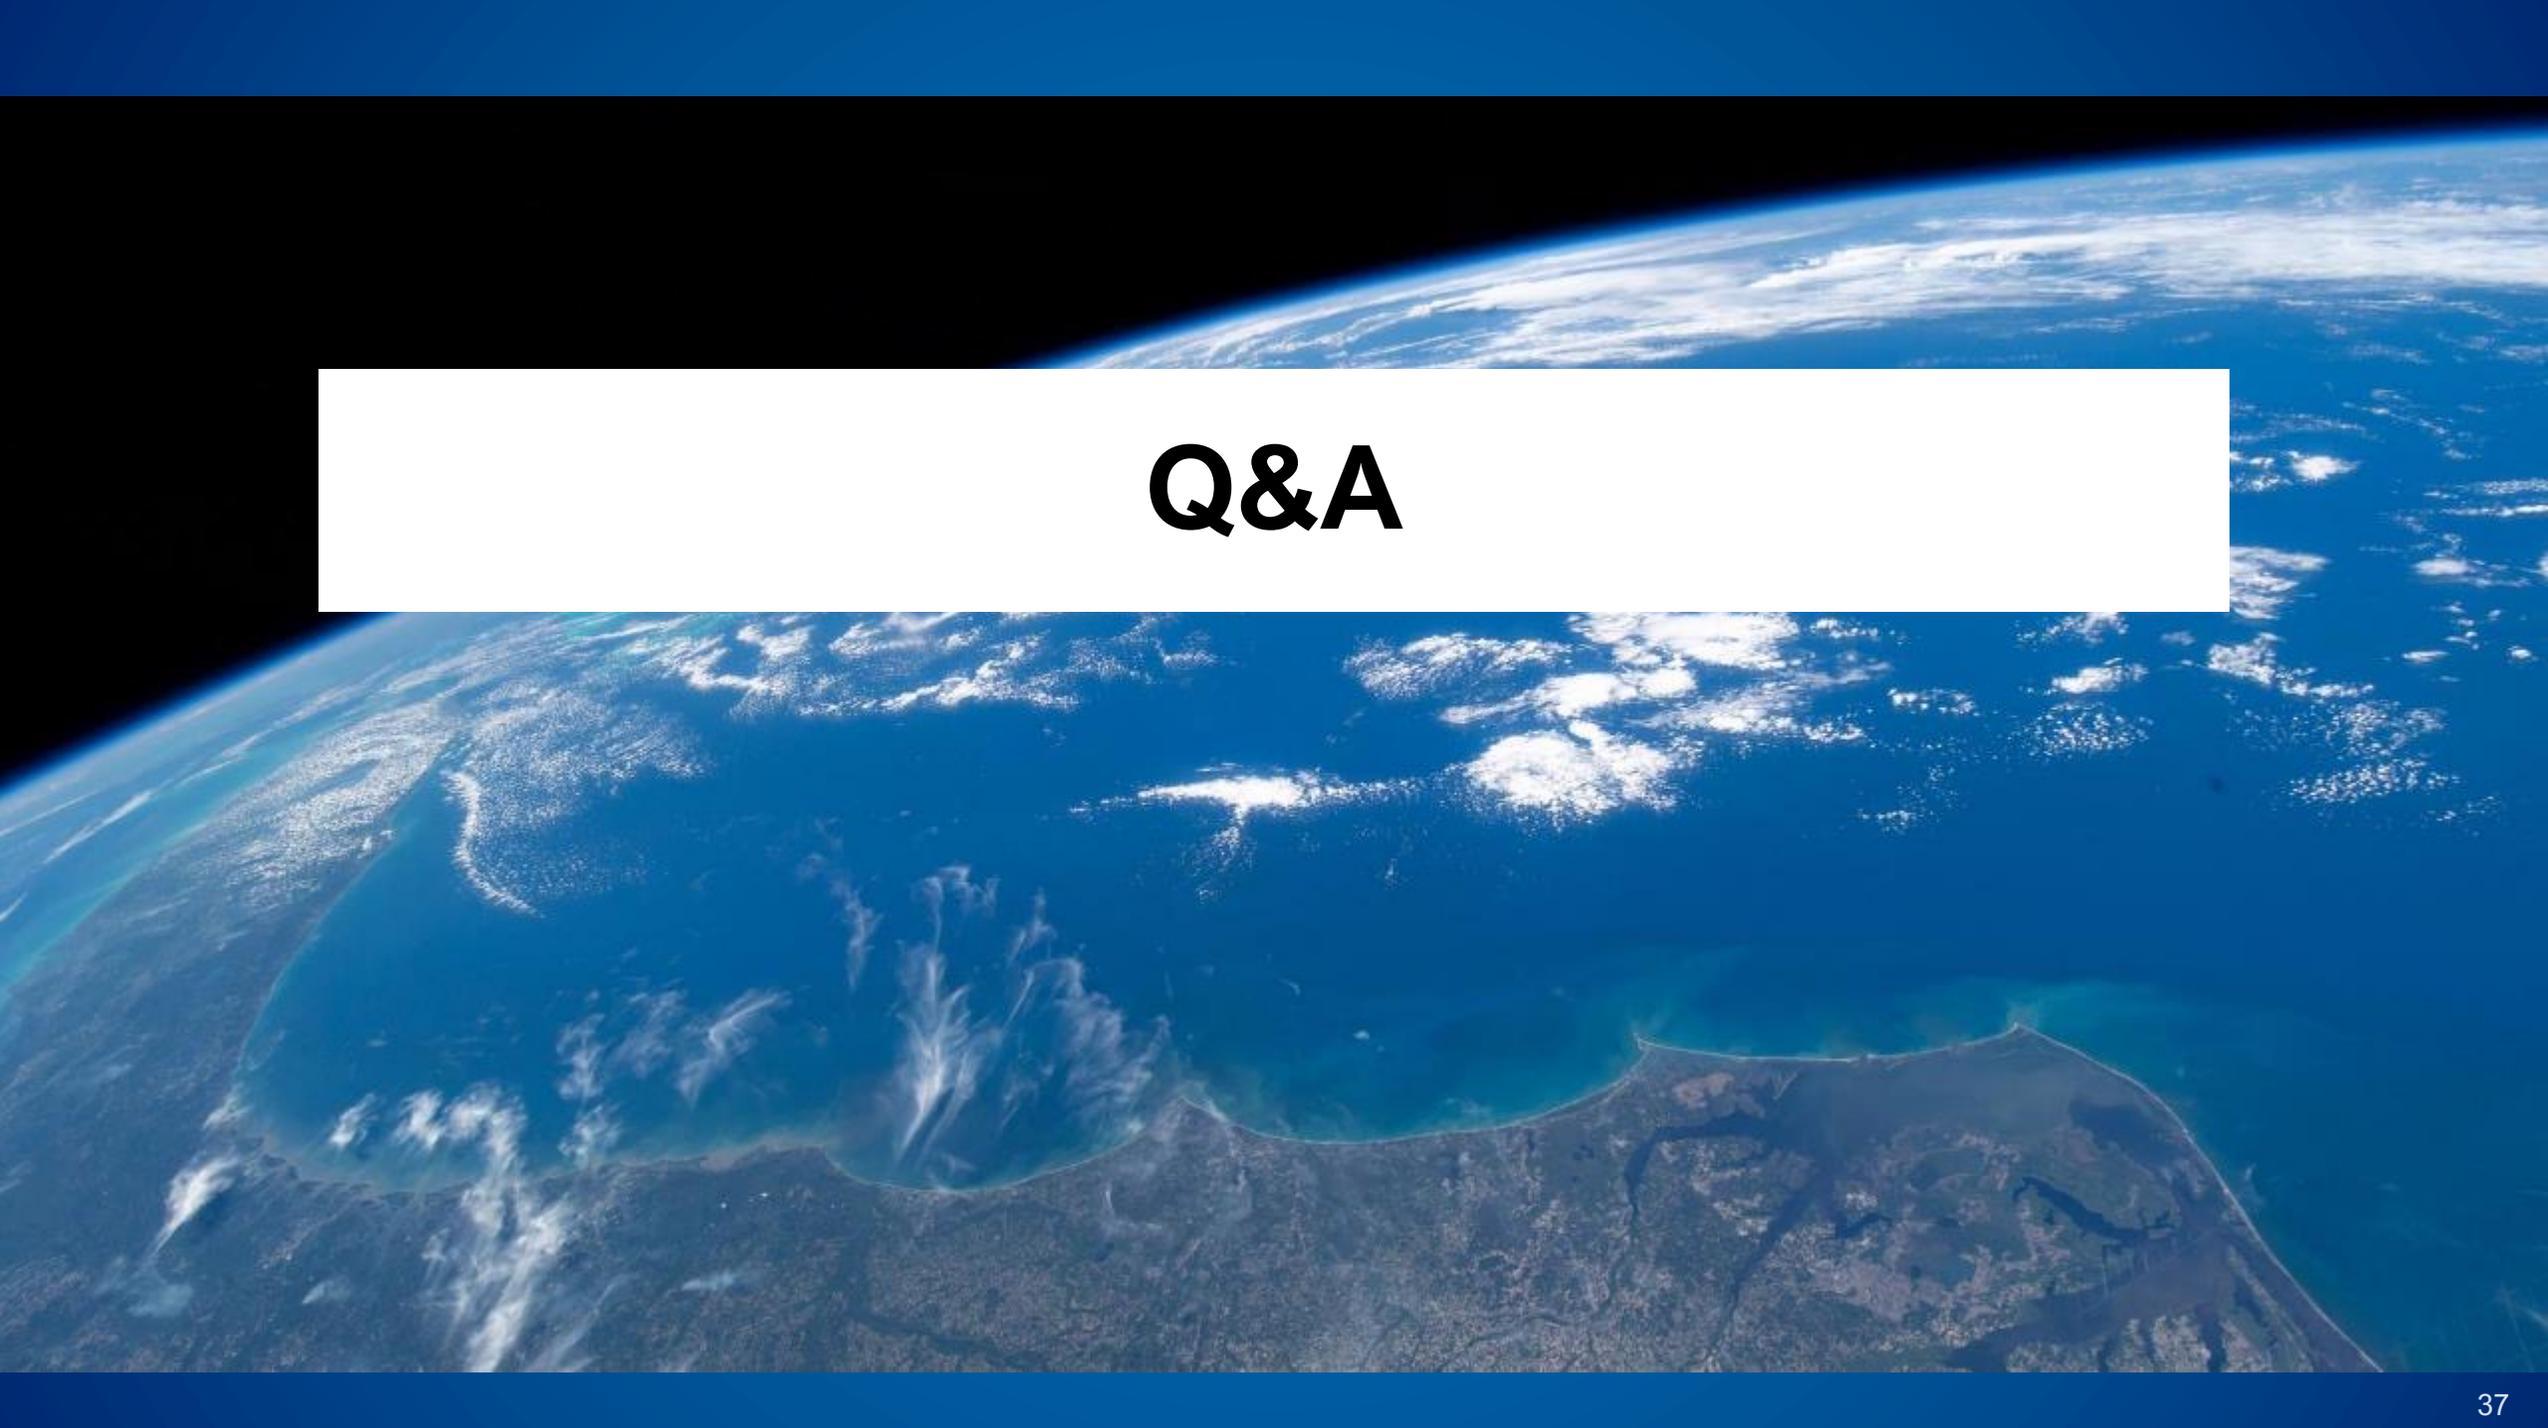

Policy
Support

- Analyze existing policies and initiatives and identify opportunities for improvements

- EPA examined how inventories are developed in the agriculture, waste, and wastewater sectors (relevant to biogas projects) in India and identified potential improvements, particularly in MRV

*Workshop on Enabling Biogas
Delhi, India, 2020*

Q&A

Thank you!

Nick Elger

Program Manager, AgSTAR Program and
