

PHI: BAGUIO CITY SMART FLOOD WARNING, INFORMATION AND MITIGATION SYSTEM

CONSOLIDATION PHASE
PRE-MONSOON ASSESSMENT REPORT
APPENDIX

OCTOBER 2023

ASEAN
AUSTRALIA
SMART CITIES
TRUST FUND

Asian Development Bank

Project name	Baguio FEWS Consolidation Phase
Project no.	100055619
Recipient	Asian Development Bank
Document type	Report Appendix - Final
Version	1
Date	03/10/2023
Prepared by	Vilakshna Parmar, Amit Garg, Prajnya Nayak, Stine Dybkjær, Alvaro Fonseca, Agata Sliwa, Agata Ostrowska
Checked by	Stine Dybkjær
Approved by	Alvaro Fonseca

CONTENTS

List of figures	ii
List of tables	iii
Appendix A: Bias correction scenario using error distribution	5
Appendix B: Summary of updates to scripts	13
Appendix C: Monthly generated rainfall reports	17

LIST OF FIGURES

Figure A-1 Error distribution at first level of forecast.....	7
Figure A-2 Error distribution at second level of forecast.....	7
Figure A-3 Error distribution at third level of forecast.....	8
Figure A-4 Error distribution at fourth level of forecast.....	8
Figure A-5 Error distribution at fifth level of forecast.....	9
Figure A-6 Error distribution at sixth level of forecast	9
Figure A-7 Error distribution at seventh level of forecast.....	10
Figure A-8 Error distribution at eighth level of forecast.....	10
Figure A-9 Error distribution at eleventh level of forecast	11
Figure A-10 Error distribution at twelfth level of forecast.....	11
Figure A-11 Error distribution at thirteenth level of forecast.....	12
Figure A-12 Error distribution at fourteenth level of forecast.....	12

LIST OF TABLES

Table B-1 Table of scripts which has done maximum impact on system development.....	15
Table C-1 Monthly Water Level - City Camp Lagoon.....	19
Table C-2 Monthly Water Level - Asin Bridge	21
Table C-3 Monthly Water Level - Camp 6 Bridge	23
Table C-4 Monthly Water Level - Balili Bridge	25
Table C-5 Monthly Water Level - Ferguson Bridge.....	27
Table C-6 Monthly Water Level - Sadjap Bridge	28
Table C-7 Monthly Water Level – Brookspoint	28

Table C-8 Monthly Water Level - Eagle Crest.....	29
Table C-9 Monthly Water Level - Camp 7.....	29
Table C-10 Monthly Rainfall - City Camp Lagoon	30
Table C-11 Monthly Rainfall - Asin Bridge.....	30
Table C-12 Monthly Rainfall - CAMP 6 Bridge	31
Table C-13 Monthly Rainfall - Brookspoint	31
Table C-14 Monthly Rainfall - Balili Bridge.....	32
Table C-15 Monthly Rainfall - Irisan Fire Station.....	32

APPENDIX A: BIAS CORRECTION SCENARIO USING ERROR DISTRIBUTION

7 Appendix A: Bias correction scenario using error distribution

APPENDIX B: SUMMARY OF UPDATES TO SCRIPTS

15 Appendix B: Summary of updates to scripts

Table B-1 Table of scripts which has done maximum impact on system development

Sr. No	Folder	Script	Description	Rationale
1	Logging	WritetoRealTimeDataLog	This script assesses the station data gathered on an hourly basis, providing a summary of the total hours of data received from the stations by the system.	It is crucial to monitor station performance throughout an entire day.
2	Logging	MakeDailyDataReport	This script examines the status of all model runs and jobs within a single day.	This process holds significance in maintaining vigilant oversight over system jobs and model simulations. This proactive approach enables timely identification and rectification of any potential system failures.
3	RealTime	get_api_historical_data	This script is utilized for downloading historical station data starting from the specified date.	This script previously downloaded historical data, but it lacked the ability to append this data to existing time series for updates. This issue has since been addressed and resolved.
4	RealTime	get_api_within_hour_data	This newly introduced API from PAGASA enables the system to update station data with the latest information, covering a span of up to the past 24 hours.	This API proves valuable by assisting in the update of any missing station data before each model simulation takes place.
5	Bias Correction	Check_WRFUploadStatus	This script verifies whether WRF data has been uploaded by PAGASA on schedule before initiating the simulation.	The logic of this script has undergone a complete transformation. It now examines the uploaded folders and their respective timestamps to determine the timing of each upload.

Sr. No	Folder	Script	Description	Rationale
6	Maintenance	DeleteAllSimulations	This action removes all simulations associated with the chosen model scenario.	Executing this script is essential for deleting any model. Typically, model deletion can be time-consuming, but by running this script to remove all simulations initially, the subsequent model deletion process becomes more streamlined and efficient.
7	Maintenance	ForceDeleteAllSimulation	This script has a slightly different functionality from the previous version. It specifically deletes simulations with a status of "INPUT_DATA_OK".	This script is necessary to delete simulations that have not been completed and might disrupt the smooth execution of jobs.
8	Floodwatch	CatchmentAverage_WRF.R	Add the path of the shapefile for Baguio city for creating rainfall forecast for the complete city. This rainfall forecast is just for information of O&M not using it anywhere in FEWS	This script will also create rainfall forecast time series.

ABOUT THE ASEAN AUSTRALIA SMART CITIES TRUST FUND

The ASEAN Australia Smart Cities Trust Fund (AASCTF) assists ASEAN cities in enhancing their planning systems, service delivery, and financial management by developing and testing appropriate digital urban solutions and systems. By working with cities, AASCTF facilitates their transformation to become more livable, resilient, and inclusive, while in the process identifying scalable best and next practices to be replicated across cities in Asia and the Pacific.
