AIR  
FUND**

# **Data to Solutions: Clean Air Fund & Breathe Cities**

*Sean Maguire*

*Director of Strategic Partnerships*

*Better Air Quality Conference, Manila*

*16th November, 2023*

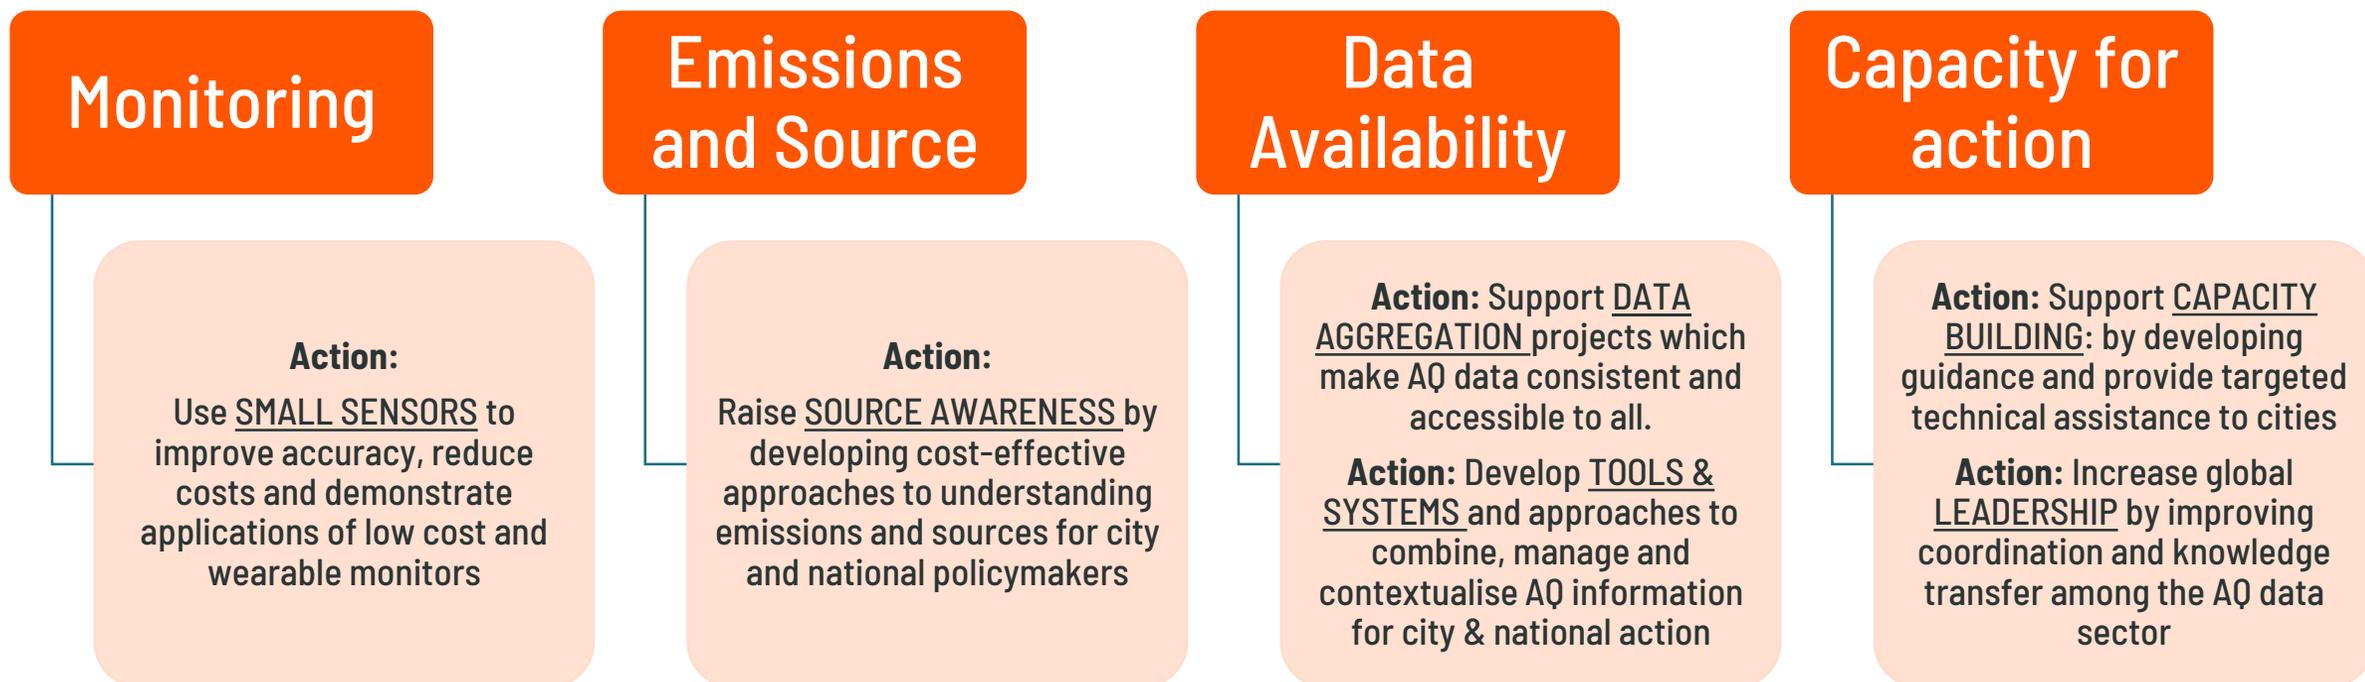

# Clean Air Fund - Our story so far

- CAF launched in 2019 with support and backing from philanthropic foundations
- We have launched a broad and inclusive clean air movement that advocates for climate-friendly solutions for people and planet
- We and our grantees have achieved:
  - ✓ More than \$100m in funding for the movement
  - ✓ Ambitious government action
  - ✓ Largest city network committed to air quality
  - ✓ The first ever business coalition for clean air

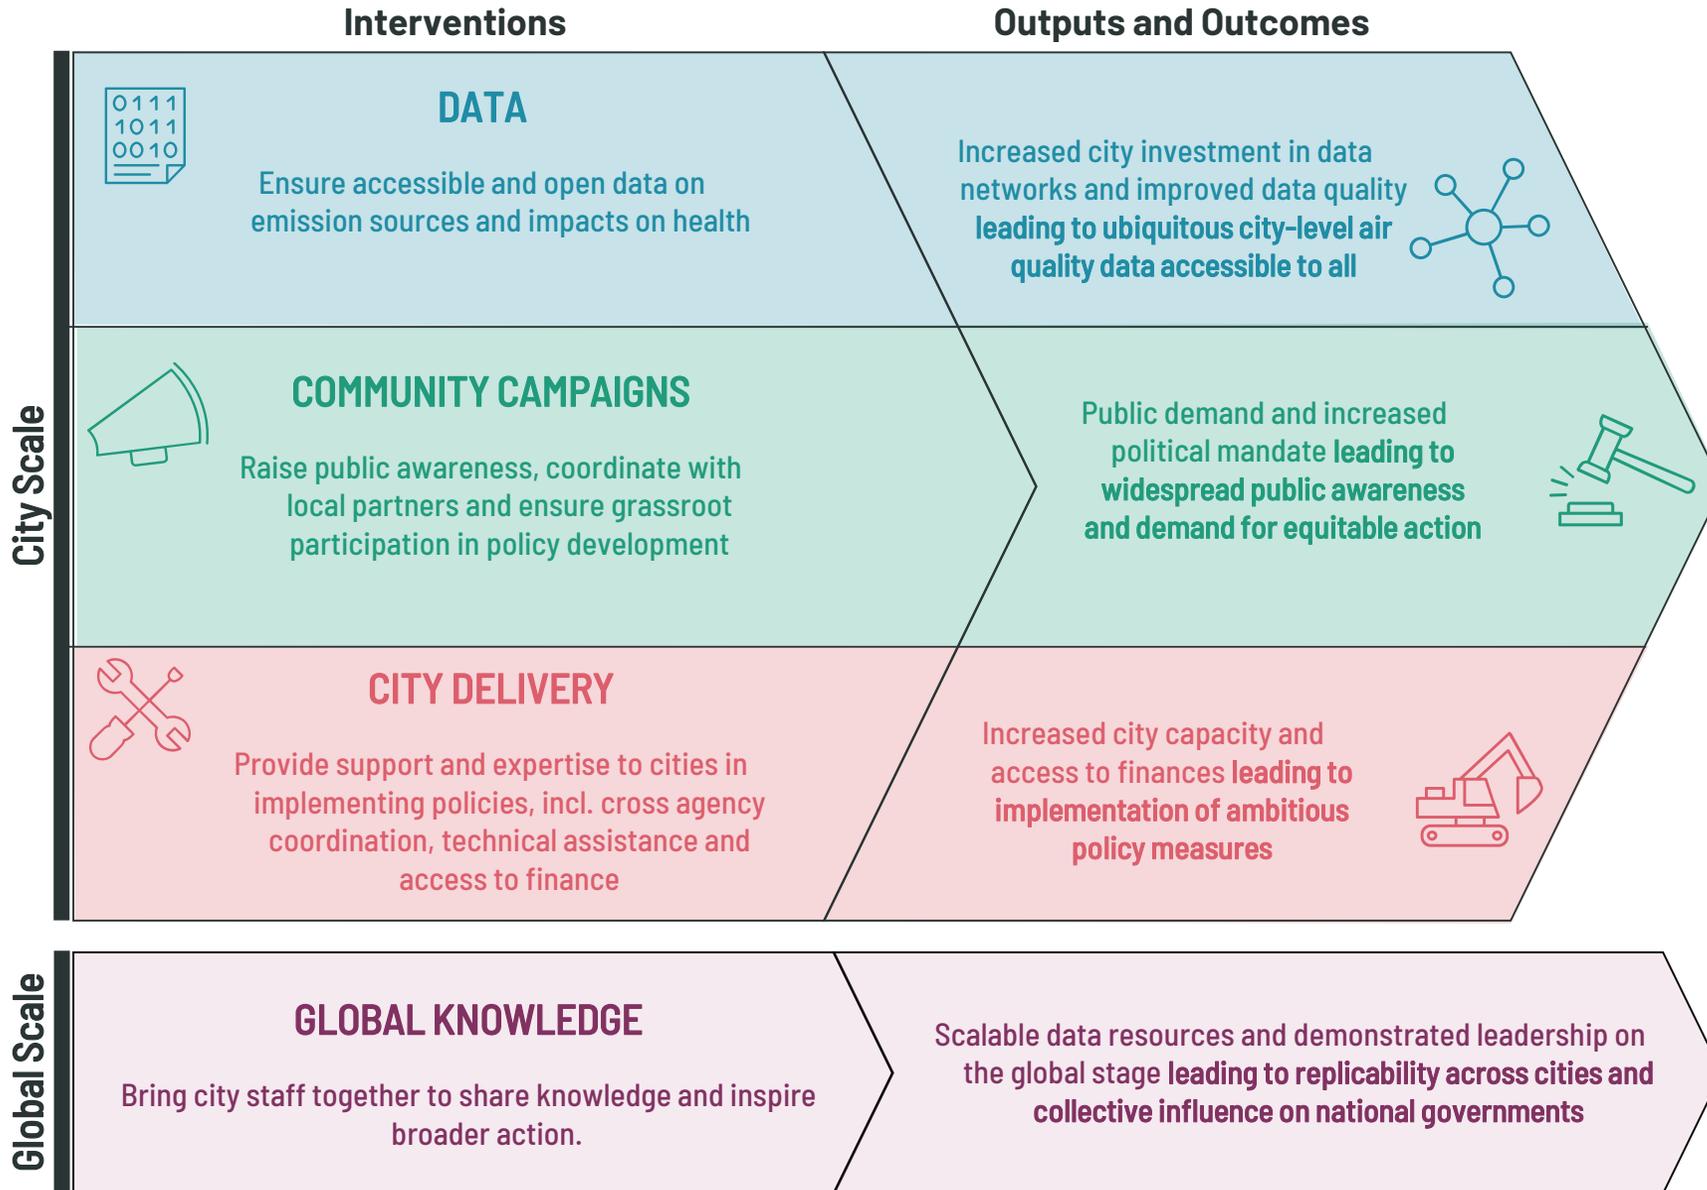

# Our Data Approach

- o We aim to make air quality data relevant and available to all, so citizens understand the quality of the air that they breathe, and policymakers have good enough data to make informed decisions.

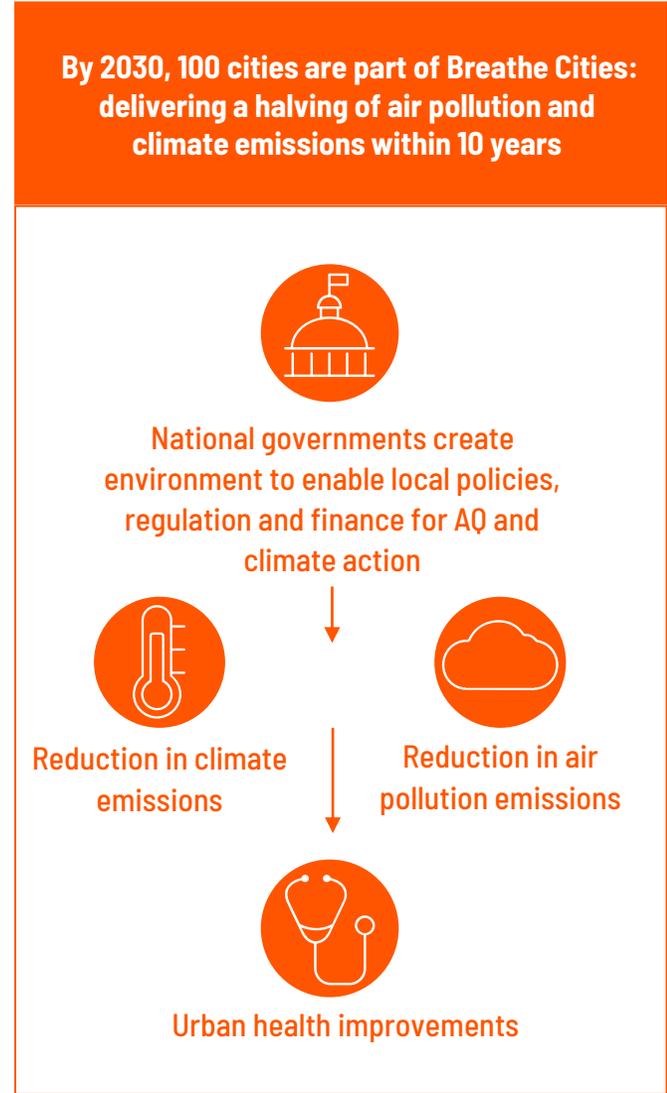

# Breathe Cities – built on a data foundation

**CLEAN  
AIR  
FUND**

Impact

# We are now scaling the Breathe Cities model

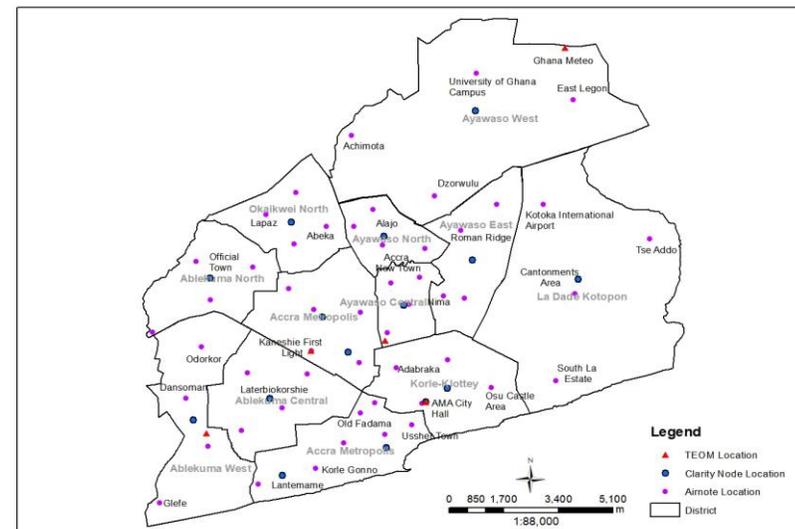

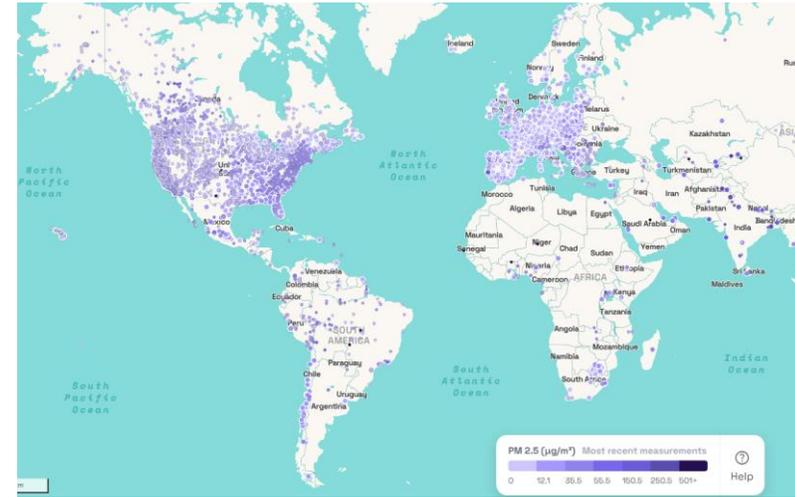

Key:

- Phase 1 pilot cities, fully operational
- Phase 2 cities, currently being established
- Phase 3 potential cities, to be agreed & established by end 2024

# Breathe Accra: Data Component

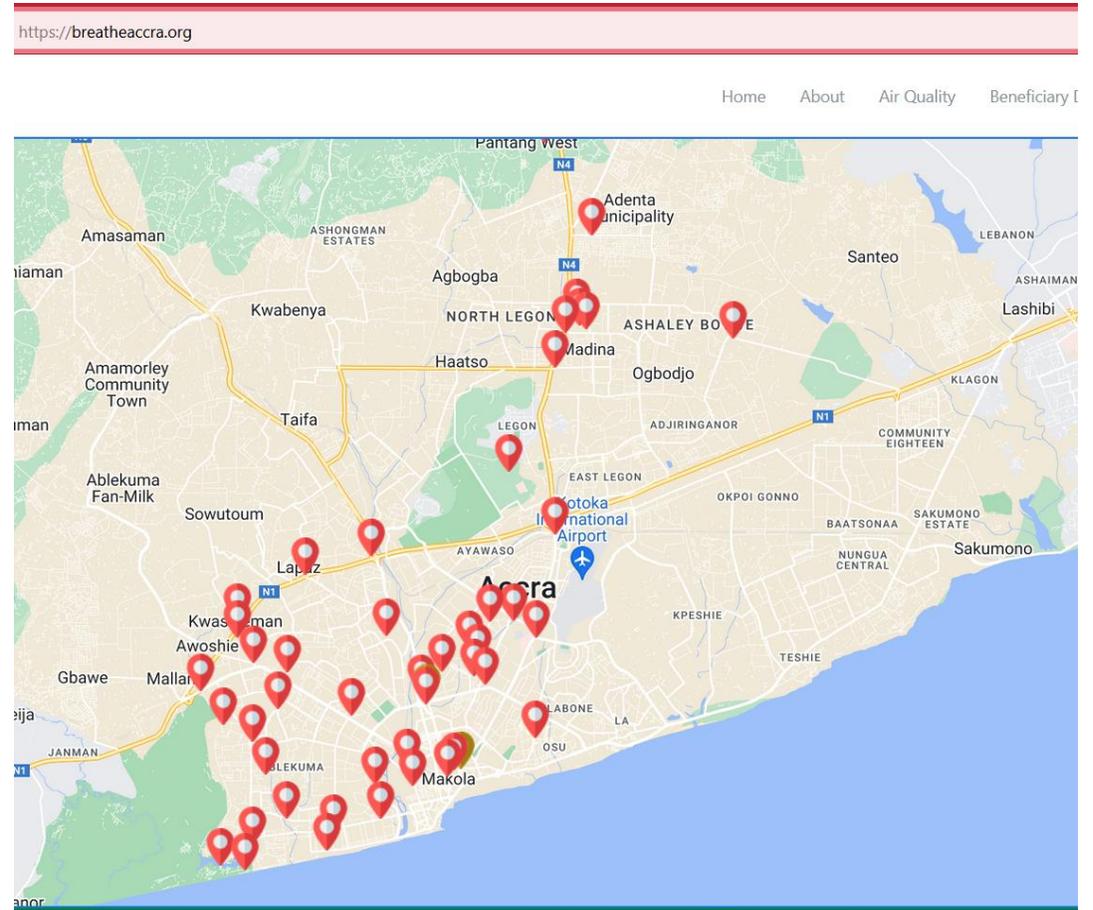

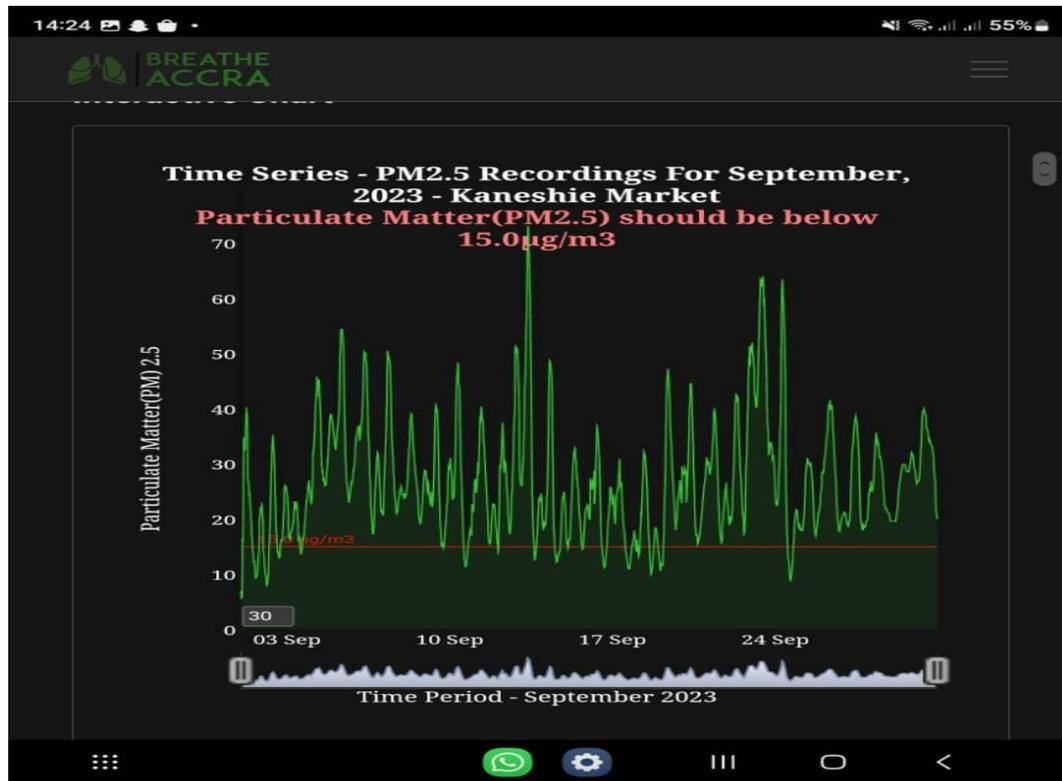

Leveraging low-cost sensor data to bridge air pollution epidemiologic evidence gap in Accra, Ghana

- Ensure openly accessible hyperlocal air quality data in Accra by deploying a network of 65 sensors
- Foster local capacity for monitoring and managing air quality which hosted only 2 reference grade monitors.
- Generate evidence for air pollution-related diseases in Accra

# Breathe Accra: Data Component

Breathe Accra reports on Air Quality

# Breathe Accra: Data Component

The planned activities encompass enhancing stakeholder capacity and generating compelling evidence to support policy actions.

- Deploy additional low-cost sensors
- Engage beneficiary districts to develop interventions for controlling air pollution in identified hotspots
- Utilize data streams for air pollution modeling to inform policy decisions
- Provide training to Environmental Health Officers in the Municipal Health Directorates of beneficiary districts in Health Impact Assessment (HIA) and surveillance for air pollution-related diseases

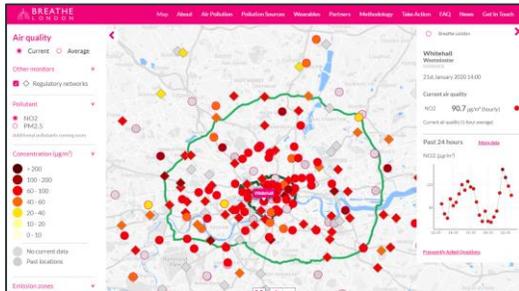

# Breathe London confirmed our theory of change

Breathe London was launched to help local officials identify sources of air pollution and develop effective solutions.

With 100 lower-cost sensor 'pods' and two specially equipped Google Street View cars, the Breathe London pilot project complemented and expanded upon London's existing regulatory monitoring network.

## DATA

- Deployment of a **hyperlocal network** to reveal new insights of air pollution hotspots and impacts
- E.g.: 28% higher NO<sub>2</sub> levels at schools in deprived areas compared to wealthy areas

## COMMUNITY & CAMPAIGNS

- Empowering grassroots campaign groups to support three policy demands:
  - Making air quality data 'actionable'
  - Supporting air quality influencers
  - Raising city-level policy ambition to reduce health inequities

## CITY DELIVERY

- Breathe London led to **new AQ policies**:
  - Expansion of the Ultra Low Emission Zone
  - New support to schools to cut pollution
  - Bringing forward zero-emission bus implementation by 3 years
  - Increased fines on major 'red route' roads\* to make roads 'cleaner and less congested'
  - New public funding for continuing the project

Note:\*Red routes are main arterial roads with NO2 levels 57% higher than an average road

# Data to Solution in LMIC

Examples of Our data to solution approach in alignment with our Data strategy

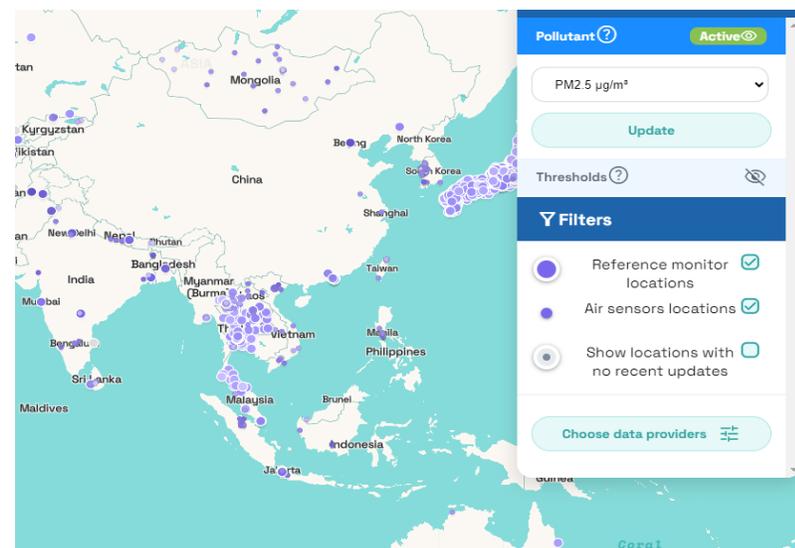

1. Boosting sensor data uptake with Sensor evaluation in West Africa

2. Centre of Excellence on Air Quality in India

3. Data Accessibility through Open AQ

4. A precision approach to activism with wearables

# Final Takeaways

- The success of air pollution projects hinges on several key elements, with data playing a pivotal role. CAF's and Breathe Cities theory of change are data driven.
- Small sensors and other innovative technologies provide opportunities but have their challenges. Eg: financing, capacity building, data management, etc.
- In summation, a holistic approach that emphasizes the value of data may help addresses financing challenges and support in development of Breathe Cities type initiatives.

# Thanks for listening!
