Development of Healthcare System in Korea

Unique Experiences of Korea

- From Aid **Recipient** ('49-'99) to Aid **Donor** Country
- Aid to Korea(1.2 B) was not fully satisfactory nor effective
- Reinvested the Foreign Aid to infrastructure as a stepping stone to development
- Strength in Knowledge (potential) rather than the funding itself (resources for the needs or deficits)

Experiences in Health Sectors

(System Strengthen) Under Strong leadership formation of the effective Governance Structure from central to region and community

(Establishing the Legislation and Administrative Structure) Maternity health Laws & Regulations (1973), Special measure to the rural community(1980) which became basis for the dispatching doctors to the villages

(Training of Human Resources) Dispatch Nursing Practitioner as the key primary health care provider

(Facility Improvement & Service Upgrade) Providing comprehensive Services at Health Centers, Posts, and MCH center to the mother and child both urban and rural

(Data & Statistics Control) MCH Handbook Distribution, Reports and statistics, HC network

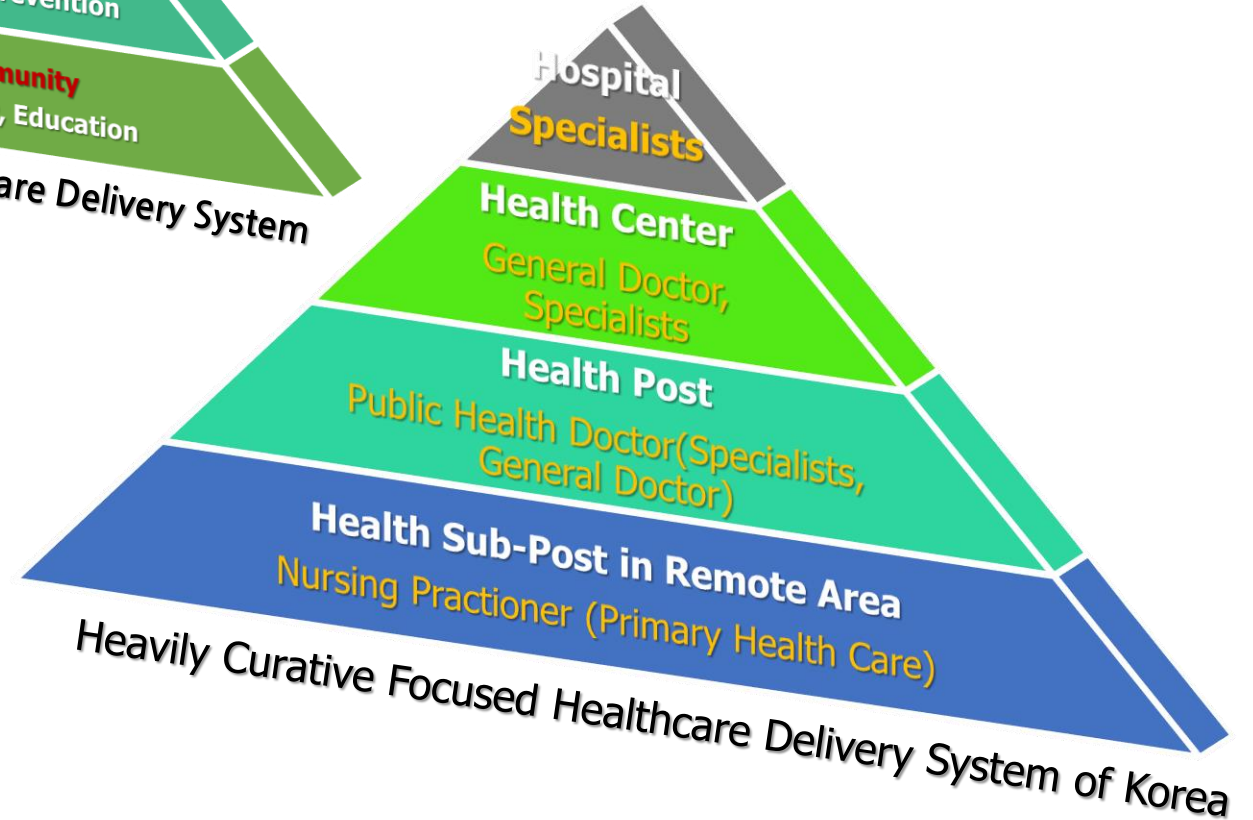

(Community Participation) Promote active participation through New Village Movement, HC Committee and used existing woman's union and creating volunteers group

Establishing Health Center Based Primary Healthcare System in Korea

Special Law on "Promoting Health Service in Rural Areas, December 1978

Special Law
 Dispatch Doctors to Health Post
 Dispatch Nursing Practitioner at Sub-Post

DIGITAL BANGLADESH

Strengthen Healthcare Delivery System

**Community
Clinics**

**Mohesikhali
Upazila
Health
Complex**

**Cox' Bazar
District
Hospital**

**Higher
Hospital in
Dakha or
Yonse**

Tele Medicine

Limited Lab. Support

Cloud-based Health Information Exchanger

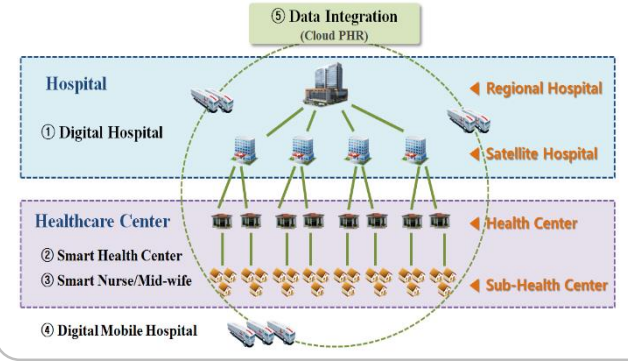

Health Information
Search/Storage/Transfer/Exchange/Process
Open API

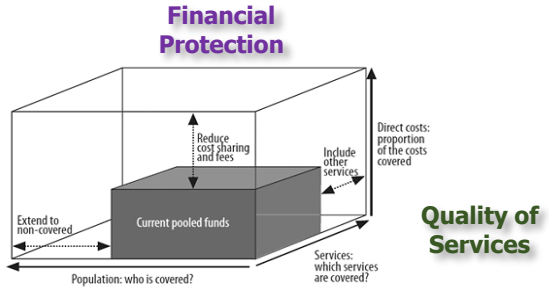

PAD based Smart Home Visiting Service

Smart Public Healthcare system

Accessibility to Services

Three dimensions to consider when moving towards universal coverage

Expansion of Accessibility using ICT based Digital Health

Strengthen Healthcare Delivery System via Digital Health Technology

Related Healthcare Devices

Mobile Urine Analyzer

Yodoc-M & Yodoc-10 Urine Strip

Product Specifications	
Dimensions	79 x 145.5 x 28.4mm
Screen	4.3inch (touch-screen)
Evaluated Parameters	Occult blood, Bilirubin, Urobilinogen, Ketone body, Protein, Dinitrate, Dextrose, Acidity, Specific gravity, White blood cell

Mobile Blood Diagnostic Device

iChroma 2000 & Strip

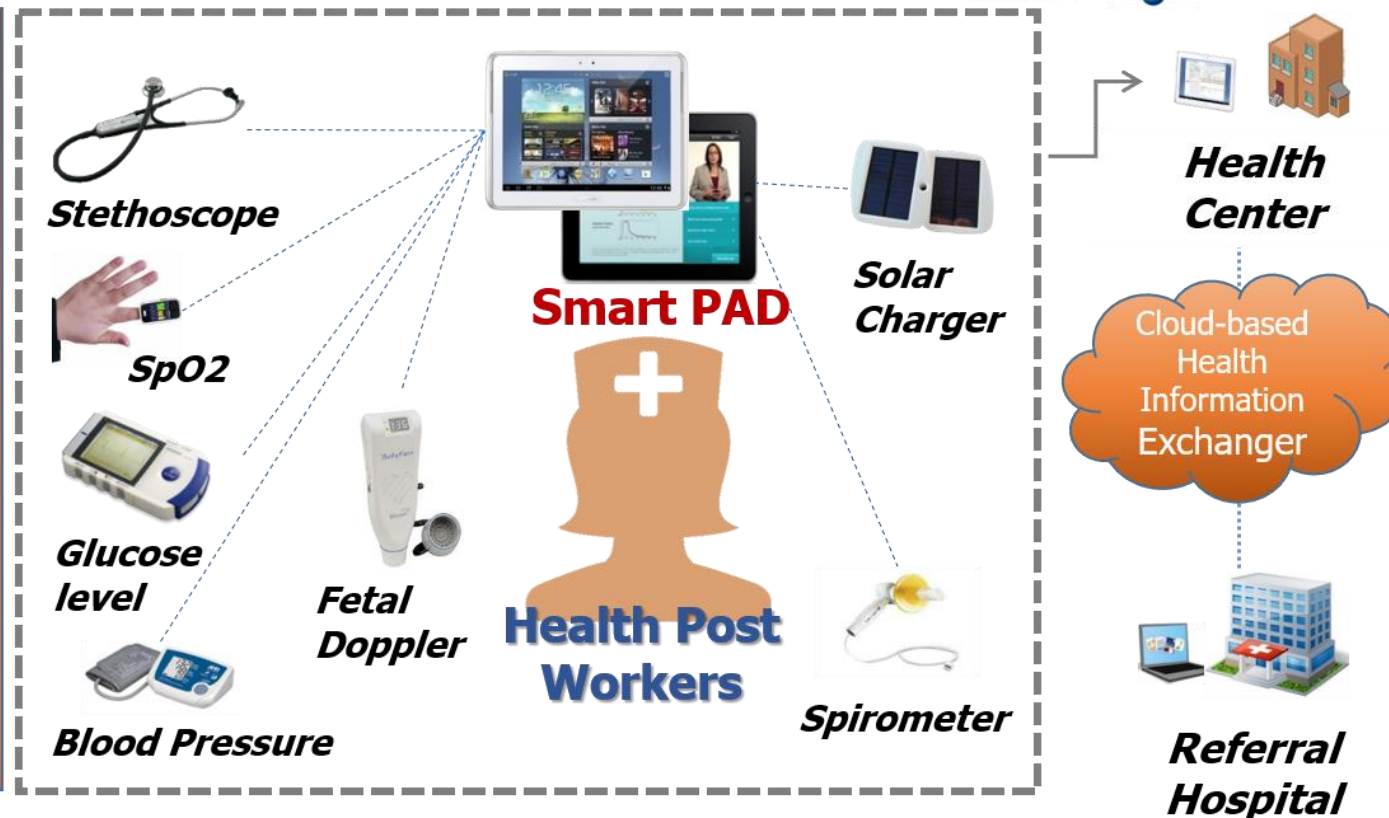

Product Specifications	
Dimensions	276 mm (L) x 220 mm (W) x 91 mm (H)
Weight	1.3 kg
Data output	7" touch color LCD
Motor	Stepper Linear Actuator (5V, 0.34A)
Communication ports	USB 4 ports, LAN port, USB OTG port
Operation temperature/ humidity range	15 ~ 35 °C
Storage temperature /humidity range	Temperature -20 ~ 50°C, Humidity Max. 70%
Test result storage	Patient test results (1,000) / System check results (500) Standard material (control) test results (1,000)
Save of ID chip information	500 ID chips (Max. 5 LOTs per each item)

Pad based Mobile Health Project

Establishing Smart Healthcare System Under Hospital

Convenience of PAD based Applications

- Non skilled people can use PAD
- Simultaneous Connection and Cloud Portal Relay to HC
- Solar Charging System
- Patient Care Support
ANC support
D.M. , HiBP, COPD
- Telemedicine via Camera-Movie
- Patient Health Data Collection
- Community Survey
- Remote Education & Report

■ Supporting Health Post with PAD Based Smart Healthcare System

Mobile Ultrasound Device

Sonon 300C & Sonon 300L

Sonon 300C

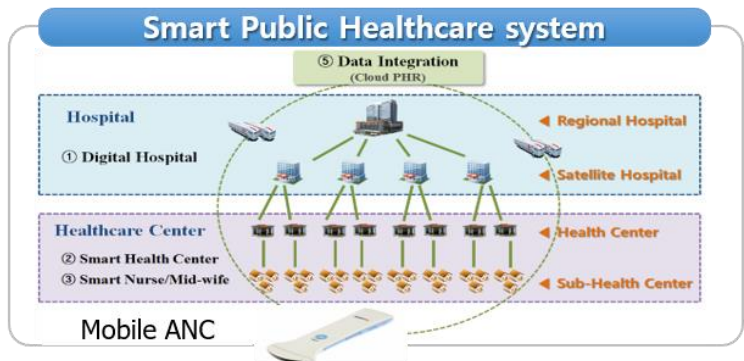

Product Specifications	
Frequency	3.5 MHz only
Max. Depth	20cm
Imaging Mode	B Mode
Weight	390g with Battery
Dimensions	78 x 219 x 38mm
Field of View	58.2°

Sonon 300L

Product Specifications	
Frequency	5, 7.5 and 10MHz
Max. Depth	10cm
Imaging Mode	B Mode / Color Mode
Weight	370g with Battery
Dimensions	78 x 229 x 38mm
Field of View	4cm

Using Non-Expert by Tele-Sonography Technology

Mobile Ante Natal Care

As Is

Current Scanning

Simultaneous Scan & Diagnosis

- Requiring Radiology Specialists
- Restricted Medical Services

To Be

3D Tele-Sono Scanning

Separate Scan & Diagnosis

- Non Requiring Radiologist at the scene
- Expansion of Benefits to other areas

Training of Trainers for the Mobile Ultrasonography Examination

January 2018 / Moheshkhali Island, Cox's Bazaar, Bangladesh

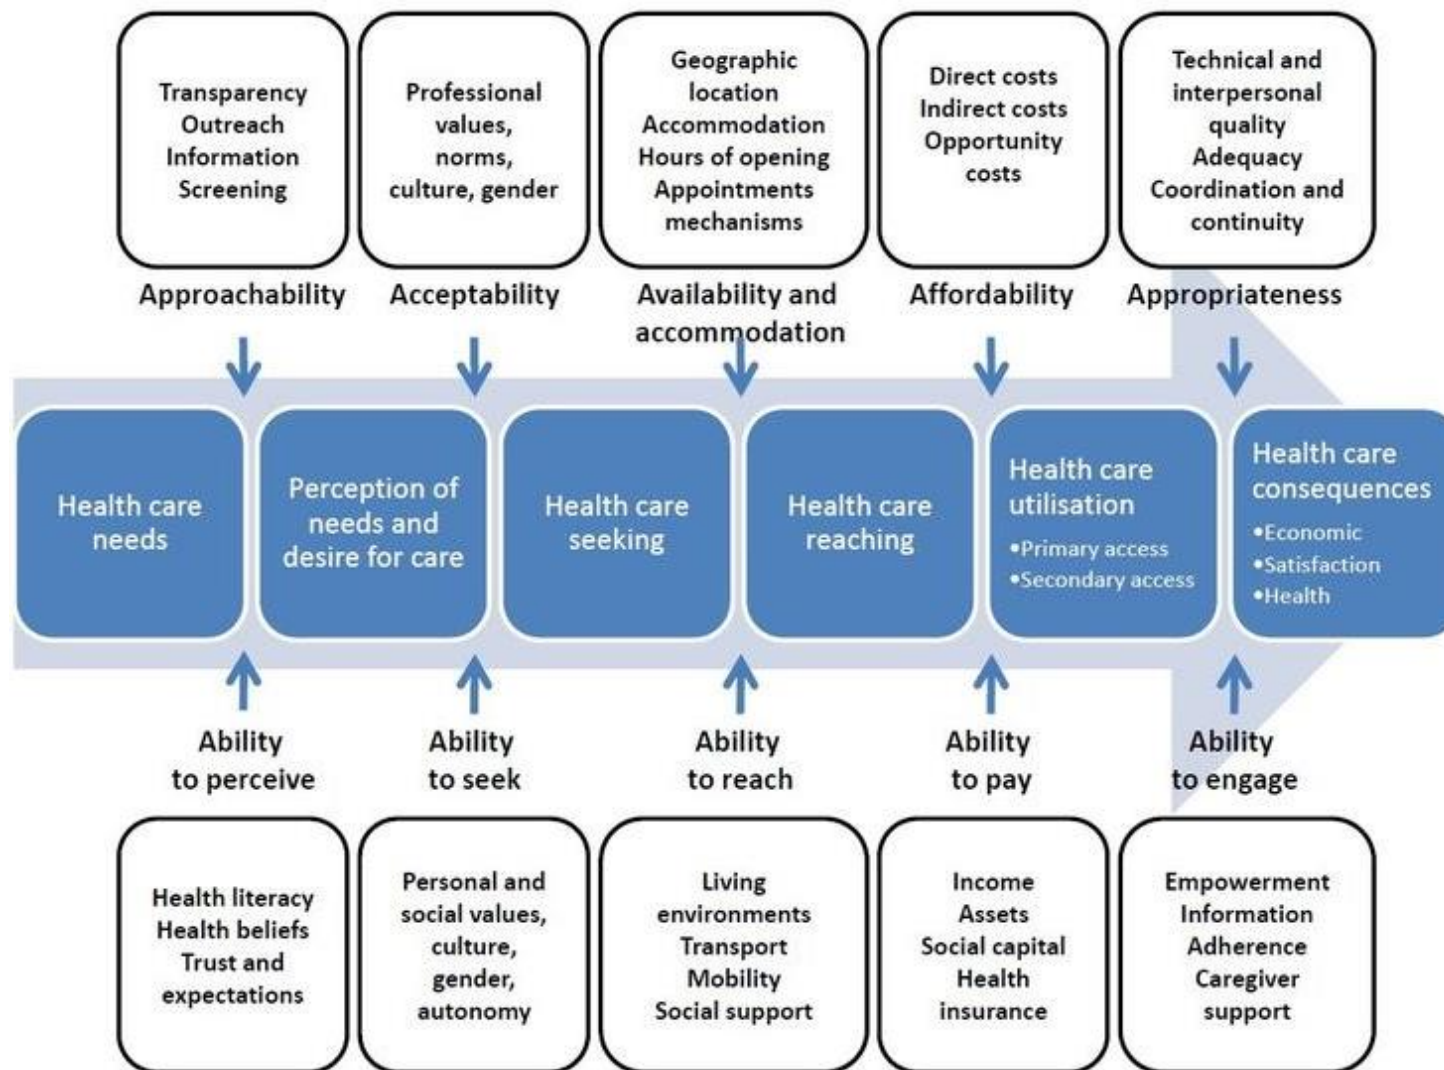

Preparation for the launching of **Mobile Ante Natal Care** Project for the Rohingya People Group in Cooperation with Bangladesh Government & International Organization for Migration

Accessibility
of..... Providers,
Organizations,
Institutions,
Systems

**Access Opportunity to have
Healthcare Needs Fulfilled**

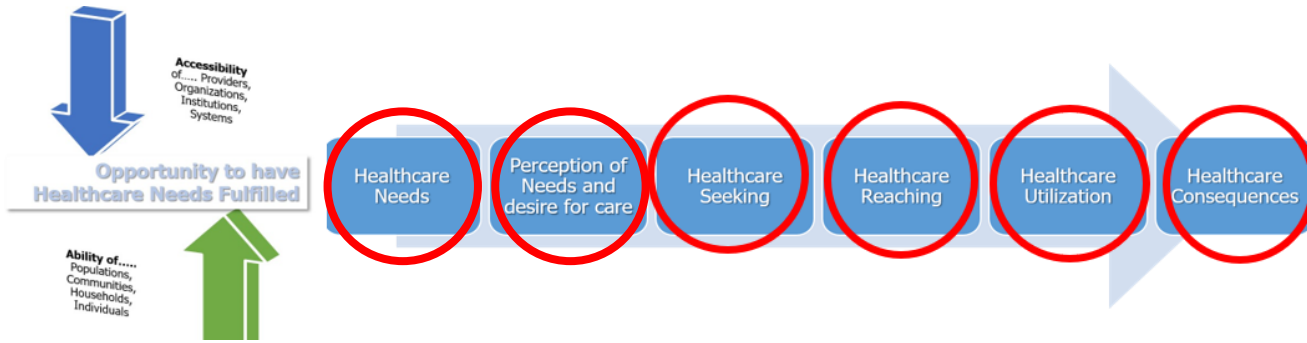

Ability of.....
Populations,
Communities,
Households,
Individuals

Current Situation and Needs of Certain CIS Hospitals

- Due to lack of economic development, no major equipment & supplies since the fall of former Soviet Union
- Good number of hospitals, doctors and hospital beds but most of the diagnostic and treatment support rely on human resources mostly.
- Most of the hospitals are governmental and public service is free. So the development of each governmental hospital is almost impossible due to lack of the governmental budget.

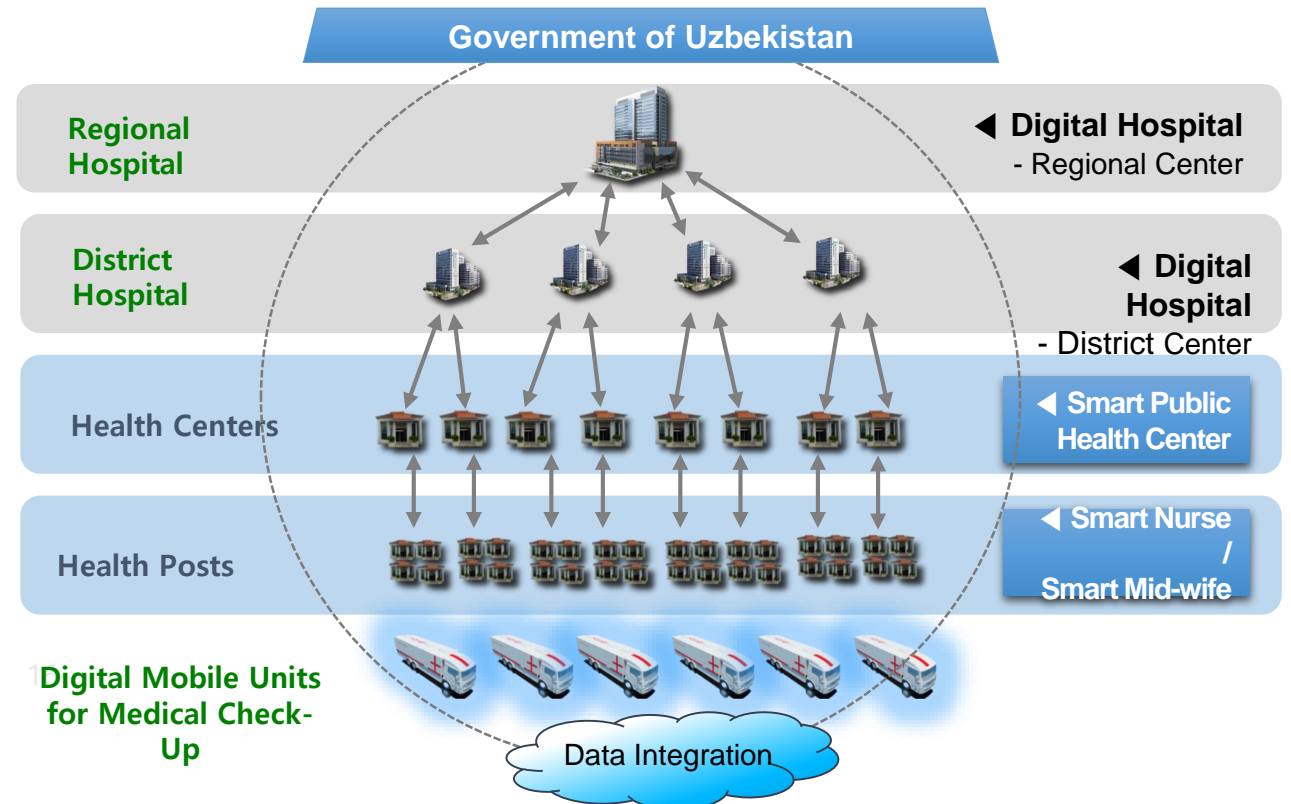

Conceptual Design of Hospitals Required in Central Asia

- Self-Supporting hospital that lead the development of other hospitals in the same city or region not only prosperous independent hospital proper
- Complementary, harmonious and synergistic hospital that share the burden of diseases and needs of patients with other hospitals in the same city or region
- Hospital that is not inward looking but outward, service oriented and identify themselves as an asset of the community

Smart Healthcare System Digital Hospital Based Open Access Model

Optimal Location for the new hospitals

Medical City where most of the hospitals are
High Accessibility, center 4 Training & Sharing

Andijian Hospital Location

Nukus Hospital Location

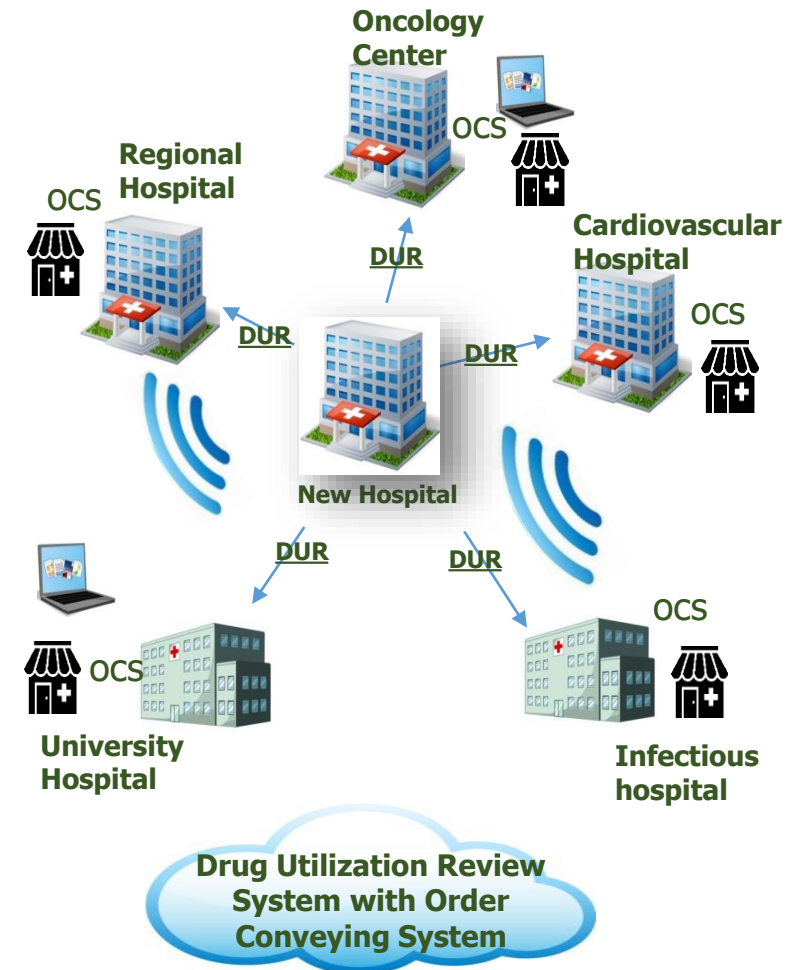

Bukhara Hospital Location

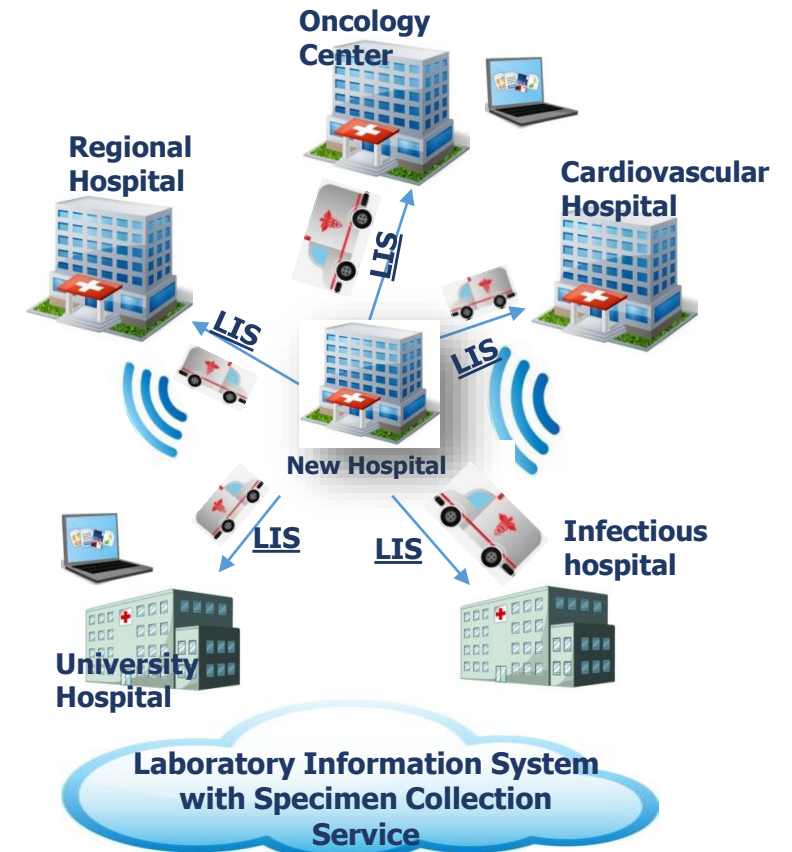

Open Hospital with DUR & OCS

- Shares the highest technology of the hospital with other hospital to support doctors prescription
- New hospital can provide Drug Usage Regulation Service and Order Conveying System Service to network hospitals via internet
- DUR automatically check the usage of medicine to prevent potential misuse, abused to create such as Anti-Microbial Resistance
- OCS send the prescription to drug store in and outside of the hospital for the patient to pick up instantly
- SPC might help network hospital to establish drug store inside the hospital and provide continuous drug supplies including SCM.
- Might need to form a membership hospital network & Financial agreement

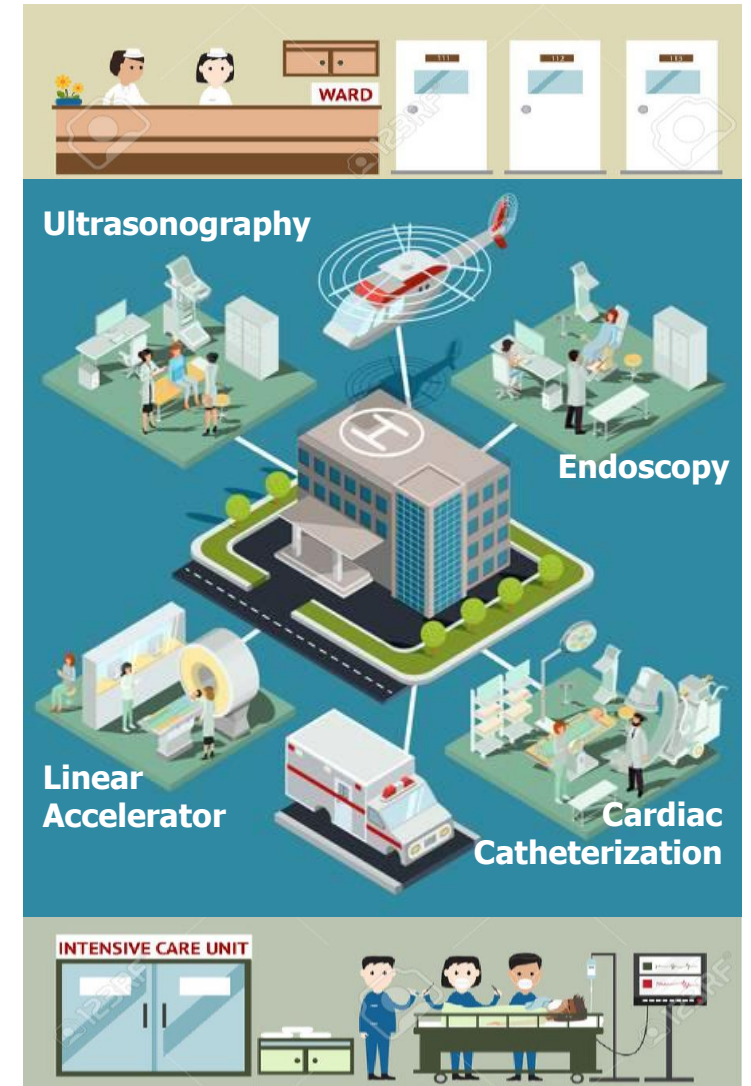

Open Hospital with Collection & LIS

- Shares the laboratory equipment, test and Laboratory Information System with other hospital
- New hospital can provide Laboratory Test List and Specimen Collection service daily with LIS via internet
- Network hospitals don't need to buy the expensive equipment and unnecessary lab tests so the medical service cost could come down
- New hospital can help network hospital to initiate evidence based medicine and training seminar and workshops to improve the knowledge and skills
- SPC might need to establish efficient specimen collection system within city/region
- Might need to form a membership hospital network & Financial agreement

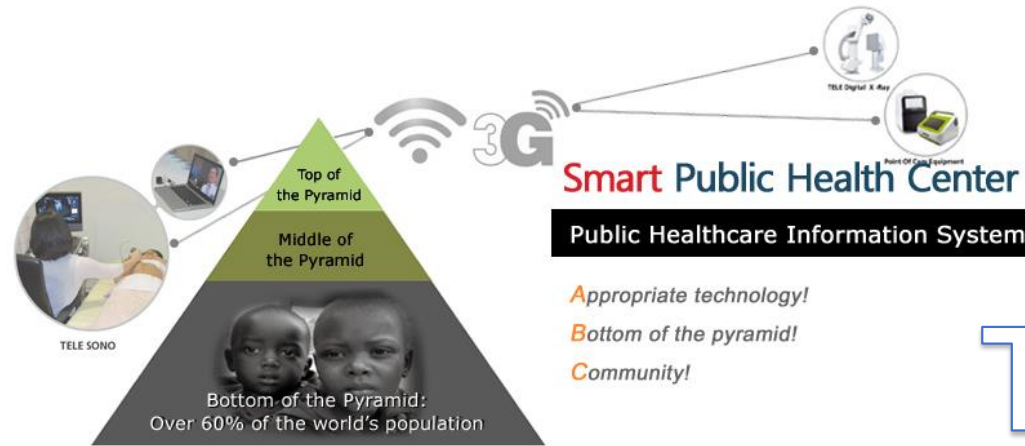

Open Hospital with Facility Sharing

- Shares the key facilities of hospital with web-based facility reservation system
- Sharing Facilities might include imaging diagnostic facilities such as MRI, C-T, PET CT as well as various Endoscopies and Ultrasonographic equipment
- Hospitals could share the hospital beds and ICU beds each other as well as some treatment facility such as Linear Accelerator, and Cardiac Catheterization Rooms.
- Network hospitals don't need equip the faculties and buy expensive equipment so the medical service cost could come down
- Might need to form a membership hospital network & Financial agreement

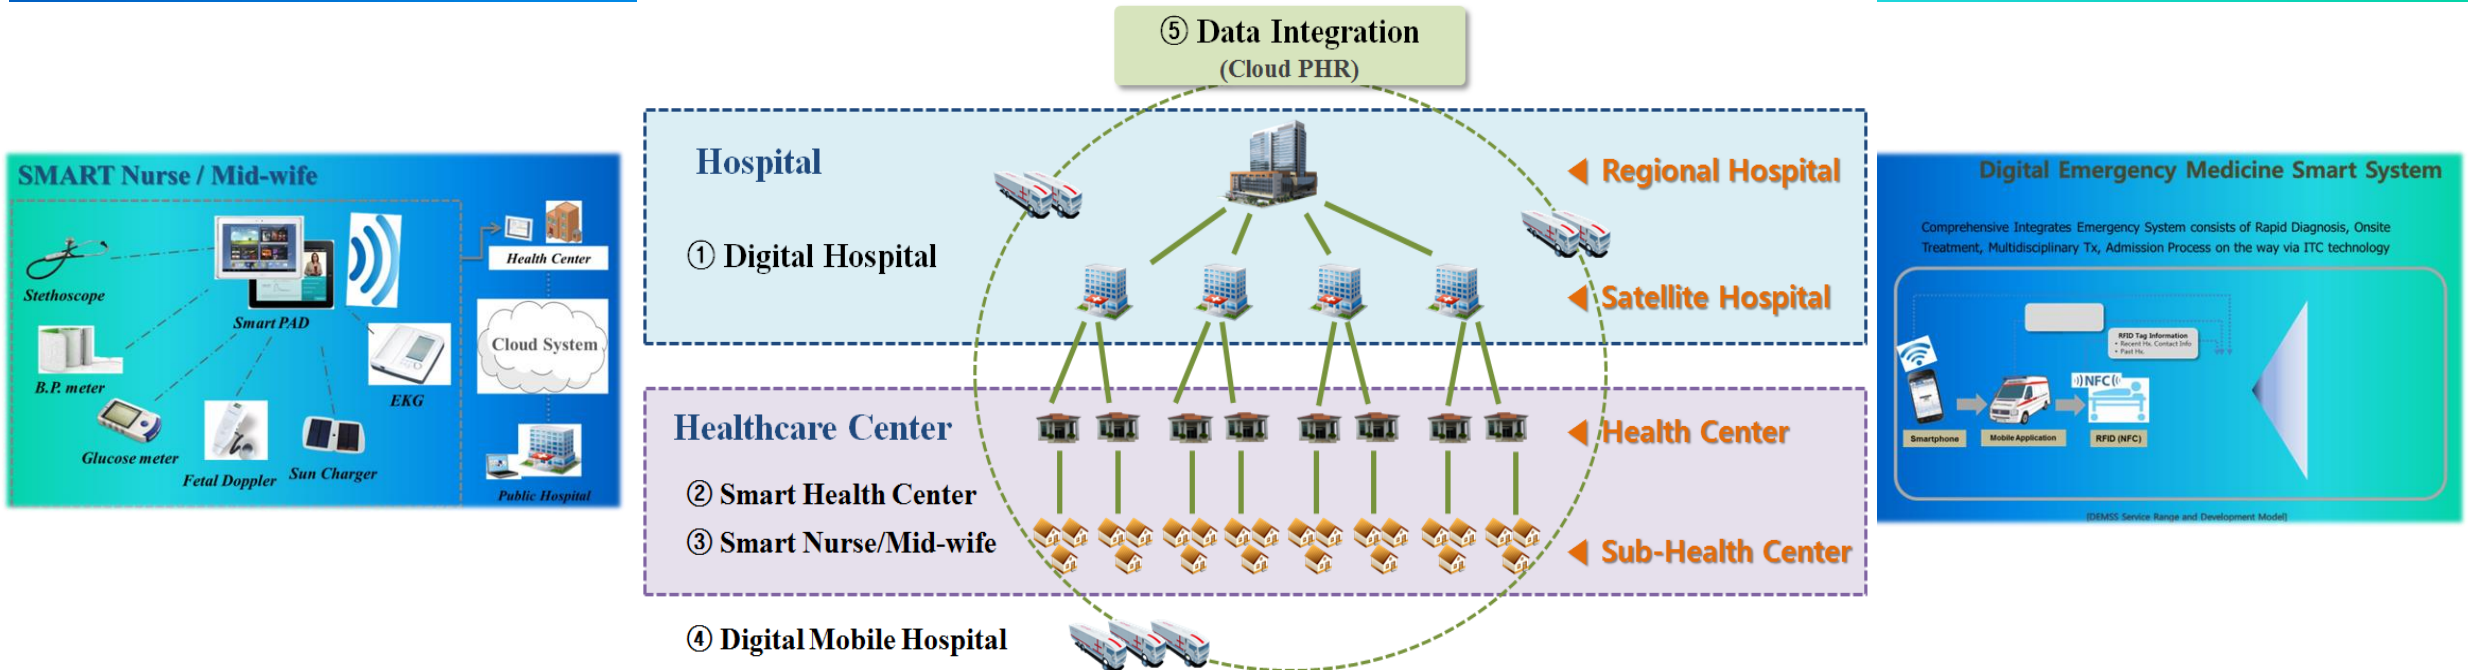

Universal Health Coverage

Digital Health Technology

Achieving Universal Health Coverage by Participatory Knowledge Transplantation using ICT based Health technology via Smart Healthcare System Strengthening

Thanks !
