# Impact of Covid-19

## Economic Challenges

### 2020 Q1&Q2

- Loss of 6.7% total job hours
- **30m Job Losses in 2Qs** (It was only 25m during 2008 GFC)

### 2020F

- -5.2% in Global GDP
- -1.6% in Asia GDP

### 2021F

- **Recession in most countries**

# Impacts of COVID-19

3

## Risks due to Covid-19

### Traditional Cash flow Declined

- Border Closure Disrupted Traditional Sources of Cash Flow
- Across Travel & Hospitality, Beauty, Fashion, Automotive, Agriculture, F&B, Retail, construction etc...

### External Cash flow Declined

- Decline in Number of Tourists, Business Travelers, Foreign Income
- Reduced Remittances, Supply Chain, eCommerce, Real Estate Investment, Financial Investment

### Lower Internal Consumption and Debt Servicing

- Slump in Internal Consumption and Debt Servicing Abilities
- Due to Layoffs, Strikes, Disruption to Operation and Governance etc...

### Gaps in Regulatory and Governance

- Conflicts Between Physical Requirements and Digital Realities
- Affect Debt Servicing, Loan and Insurance Applications, Trade Related

# Impacts of COVID-19

4

## Opportunities during Covid-19

### Online and Digital Services

- More personal time spent indoor
- Services switched to online operation
- More demand for online and digital services

### Network Connectivity

- Shifting to remote working
- Growing reliance on online communication
- Increase demand for mobile & network infrastructure and connectivity

### Virtual Assets Service Providers

- Digital representation of value that can be electronically traded, transferred or used for payment
- Cross border remittances, digital assets and tokens etc... have become an importance source of cash flow

### Digital Identity

- Demand for digital certificates, digital wallets, and others
- Increased demand for digital identity and secured transparency

## Challenges

**Contactless Connection public infrastructure and regulation** are in demand, but still lacking in most economies

# Impact of Covid-19

5

## Digital Landscape

### Digital Gap

- Gap in digital knowledge, education and skills remained the main concern
- Lack of public digital infrastructure is the bottleneck

### Uplifting Emerging Markets

- More opportunities within emerging markets
- Leapfrogging possible in emerging markets given the nascent playing field

### Digital Investments

- Funding for digital infrastructure, startups and education remains vital

### Impact of Covid-19

- The pandemic had caused both devastation and opportunities in various different sectors (Refer to diagram on the right)
- Opportunities exist in terms of **job creation and capital inflows**

### How Covid-19 Has Impactted The Global Startup Scene

Change in revenue of selected startup sectors since the start of the pandemic\*

\* Worldwide (between December 2019 and June 2020).  
Source: Startup Genome

# Impact of Covid-19

## Internet Traffic

### Increasing Internet Traffic

According to OECD, along the entire Internet value chain, fixed and mobile broadband operators, content and cloud providers, and points where Internet networks connect to each other to exchange traffic, called Internet exchange points (IXPs), are experiencing as much as **60% more Internet traffic than before the COVID-19 outbreak.**

Figure 1. Internet bandwidth at Internet exchange points, by country

Notes: Data shows the median IXP peak traffic aggregated by country in September 2019, December 2019, and March 2020, based on public sources. Tbps = terabits per second.

Source: OECD based on data from [Packet Clearing House](#).

# Overview of Action Plan

7

## A Summary of the Pain-points and the Action Plan

### ◆ **Connect the Unconnected**

- To adopt Mesh Network
- To adopt Satellite and Mesh Boxes

### ◆ **Digital Identity**

- To adopt Self Sovereign Digital Identity

### ◆ **Travel**

- To adopt Travel with Health Screening
- To adopt Zoning
- To adopt Flight Pass

### ◆ **Trade**

- To enhance Digital Connectivity
- To keep supply chain opened

### ◆ **Fintech and Digitalisation**

- To offer Education and Grant
- To provide Sustenance and Digitalization Grants for FinTech

# Overview of Action Plan

7

## A Summary of the Pain-points and the Action Plan

### ◆ **Connect the Unconnected**

- To adopt Mesh Network
- To adopt Satellite and Mesh Boxes

### ◆ **Digital Identity**

- To adopt Self Sovereign Digital Identity

### ◆ **Travel**

- To adopt Travel with Health Screening
- To adopt Zoning
- To adopt Flight Pass

### ◆ **Trade**

- To enhance Digital Connectivity
- To keep supply chain opened

### ◆ **Fintech and Digitalisation**

- To offer Education and Grant
- To provide Sustenance and Digitalization Grants for FinTech

# Telecommunication Infrastructure

8

## 5G- Gold Standard in Bringing Everything Up To Speed

### 5G – Wireless Network Technology

- Faster and greater bandwidth
- Enable more connected devices
- Reduce latency to virtually zero
- The gold standard and a luxury

### Economic Effect

- Enable up to \$13.2T worth of goods and services
- Create \$22.3M worth of new jobs; \$2.1T in global GDP

### Global Leaders

- China and South Korea are the global 5G leaders

### Current Needs

- Current demand due to Covid-19 and long term need for a digitalized economy
- Broader telecommunication infrastructure needed

## Edge Computing – Gold Standard to Attain More Personalized Services

### Integration of 5G and Edge Computing

- 5G provides higher speed
- Edge Computing allows personalization of online video with target ads and users interaction
- Benefit online mobile video viewing

### Edge Computing

- Mobile Edge Computing, MEC, or Multi-Access Edge Computing
- Doing computing as close to the source of data as possible
- Reduces latency and bandwidth use
- A luxury just like 5G

### Digital Infrastructure as a Public Good

- Access to digital infrastructure is an important public good
- Enhance resilience, national competitiveness and international trade

### Utilization of Edge Computing

- 5G will make up 20% of mobile traffic by 2023
- 25% of the use-cases will depend on Edge Computing capabilities

# Telecommunication Infrastructure

10

## The Digital Gap: The connected vs the unconnected

### The Connected

- 4.57B people, 59% of the world have access to internet access

### The Unconnected

- **Over 3B people** globally do not have Internet Access
- The issue is the same in Asian
- **Cost and scalability are major concerns**

# Action Plan Connect the Unconnected

11

## Mesh Network – Cheaper Alternative

### Mesh Network

- To provides multiple Wi-Fi sources with faster, smoother, and more reliable for financial transactions

### Focus of Network Deployment

- To focus on places with poor connection
- To focus on remote area with limited internet infrastructure and with high volume of migrant remittances

### Network Expansion

- To continuously expand as additional points can be added to the network
- To act like router and providing internet access via a single connection to satellite or 3, 4, or 5G.

### E-Inclusion

- To connect the unconnected
- To serve the unbanked with electronic means
- To provide cheaper and sustainable alternatives

# Action Plan Connect the Unconnected

12

## Satellite and Mesh Boxes – Sustainable for Remote Areas

### Enhancing Traceability

- To trace, monitor and register source of origin and changes related to crop growth and other farming conditions
- To utilize satellite to trace goods in transit

### Satellite Communications

- To use low or high-orbit Satellite communications

### E-Public Goods

- To take advantage of 1/3 of the cost of traditional methods
- To reduce permanent damage to the environment
- To increase transparency for branding/quality

### Locations and Performance

- To locate farmers and measure crop performance remotely via storage in mesh boxes or data uploaded to the cloud via satellite.
- To use data analytic tools for the grant of loans and insurance

To provide affordable and secured solutions for money transfer in remote areas.

# Overview of Action Plan

7

## A Summary of the Pain-points and the Action Plan

### ◆ **Connect the Unconnected**

- To adopt Mesh Network
- To adopt Satellite and Mesh Boxes

### ◆ **Digital Identity**

- To adopt Self Sovereign Digital Identity

### ◆ **Travel**

- To adopt Travel with Health Screening
- To adopt Zoning
- To adopt Flight Pass

### ◆ **Trade**

- To enhance Digital Connectivity
- To keep supply chain opened

### ◆ **Fintech and Digitalisation**

- To offer Education and Grant
- To provide Sustenance and Digitalization Grants for FinTech

## Digitised Ownership and Access

### Decentralised Internet Connection

- Relies on a peer-to-peer network built on a community of users
- Users can pay for per use basis
- Users own the Mesh Boxes as revenue source and provide the connection and storage services
- No single entity in control and easily scalable with profit sharing

### Contactless Connectivity

- Without Digital Identity, financial and economic activities are not assessable to most and especially during Covid-19
- Open Source and Portable IDs have advantages

### Low Cost and Scalable

- Lack of digital identity impedes cash flow to the needy
- New P2P technology has almost zero marginal cost for expansion and social scaling

### Democratisation of Ownership

- Provides transparency, protects privacy and enhances mobility
- Open-source model allow crowdsourcing of wisdom
- Responsive to user demand and low cost associated

# Digital Identity

## Self-Sovereign Identity

14

### Self-Sovereign Identity

- Level the playing field with ownership
- Ensure global portability, enhances access, improving distribution of wealth
- Guarding data privacy
- Lowering cost of entry into international financial and payment markets

### Cross Zone Travel

- Applies to medical records, tracing and tracking
- Users are in control of their own identity data

### Benefits Associated

- Offer anonymous digital “persona” and defined ownership and generate cashflow/revenue
- Easier and low-cost compliance with FATF’s Travel Rule

# Action Plan: Implement Self Sovereign Digital Identity

15

## Digital ID Implementation

### Digital Identity for all

- To provide digital identity for all
- Helps to onboard, tracks individuals' activities and provides access to international remittances.

### Compliance with FATF

- Compliance with latest FATF's Travel Rule
- Implemented in June 2020

### Digital Processes and Technologies

- To make available digital processes and technologies
- IoTs, document reader, recognition algorithms, matching algorithms, user-friendly APP or interface, etc.

### Empower VASPs

- Empower Virtual Asset Service Providers
- Required to disclose customer information facilitating a trade of USD1000 or higher

### Contactless Peer-to-Peer

- To enable contactless peer-to-peer activities at low cost
- To provide Digital ID implementation by VASPs

### Promote Inclusiveness

- Inclusion in economic, financial, and health activities
- To provide an alternative contactless low-cost international remittance services and assets custody

# Overview of Action Plan

7

## A Summary of the Pain-points and the Action Plan

### ◆ **Connect the Unconnected**

- To adopt Mesh Network
- To adopt Satellite and Mesh Boxes

### ◆ **Digital Identity**

- To adopt Self Sovereign Digital Identity

### ◆ **Travel**

- To adopt Travel with Health Screening
- To adopt Zoning
- To adopt Flight Pass

### ◆ **Trade**

- To enhance Digital Connectivity
- To keep supply chain opened

### ◆ **Fintech and Digitalisation**

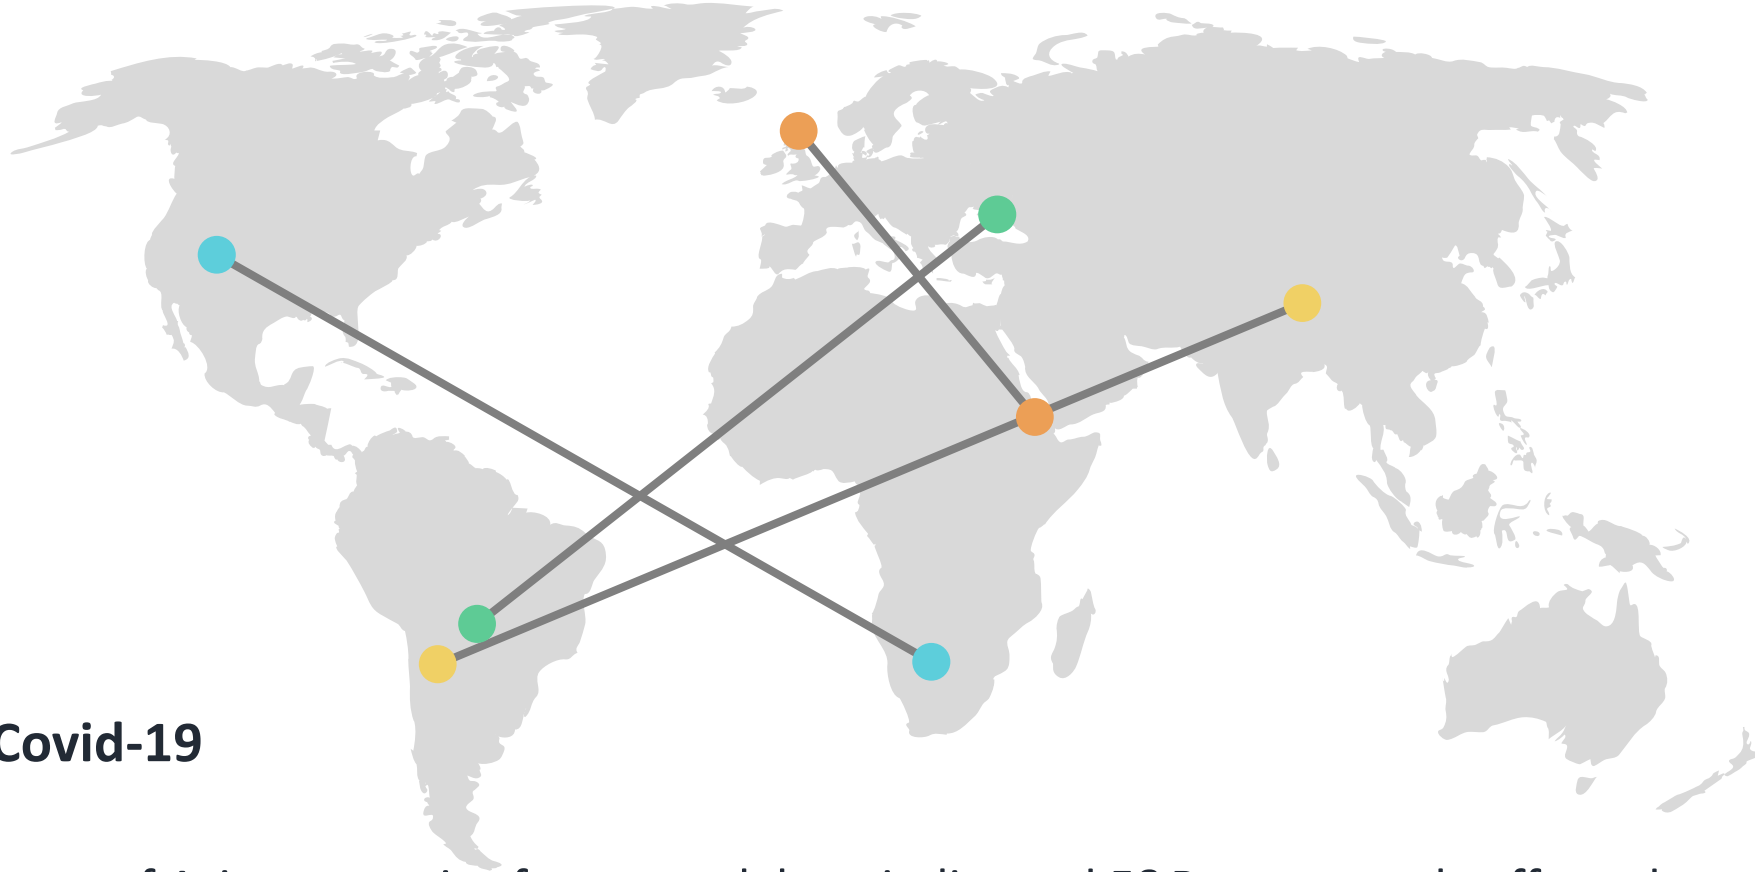

- To offer Education and Grant
- To provide Sustenance and Digitalization Grants for FinTech

# Travel Industry

16

## Facts About Travel Industry

### Impact by Covid-19

- Source of income of Asian countries from travel, hospitality and F&B are severely affected
- 20-30% decrease in international tourist arrival, estimated US\$30-50B loss
- Global loss of 75M jobs and \$2.1T in revenue, by World Travel and Tourism Council
- Air transport industry revenues fall by \$252B, 44% below 2019, estimated by International Air Transport Association (IATA)

# Action Plan: Digital Passes

17

## Encourage Travel with Health Screening

### Zoning with Digital Passes and QR Code

- To implement zoning to boost internal travel
  - To ensure self sufficient zones established
  - To reduce overcrowding, cross-interaction and cross infection
  - To complement Travel Bubble, Safe & Seal, and other zoning plans

### Covid-19 Tests

- To conduct pre-travel and arrival Covid-19 Tests
- To store medical Test-e Records

### Unlimited Flight Pass

- To provide unlimited monthly or yearly flight pass
- To tabulate Digital Records of Temperature, Molecular RT-PCR or Antibody Tests

### Benefits

- Essential for short term cash flow of businesses

# Overview of Action Plan

7

## A Summary of the Pain-points and the Action Plan

### ◆ **Connect the Unconnected**

- To adopt Mesh Network
- To adopt Satellite and Mesh Boxes

### ◆ **Digital Identity**

- To adopt Self Sovereign Digital Identity

### ◆ **Travel**

- To adopt Travel with Health Screening
- To adopt Zoning
- To adopt Flight Pass

### ◆ **Trade**

- To enhance Digital Connectivity
- To keep supply chain opened

### ◆ **Fintech and Digitalisation**

- To offer Education and Grant
- To provide Sustenance and Digitalization Grants for FinTech

# Trade

## Facts About Trade

### Impacts on Trade

- Global trade projected to fall by 12%
  - 43/46 countries recorded lower trade
- Trade are affected and rebounding with e-supply chain tracing and maintaining ports operability

### Food Traceability

- Traceability in ensuring safety, quality, and sustainability

### E-Documentation

- Related e-filing of trade documents and export health certification
- Ensure minimal disruptions

### Digitalisation & Tokenisation

- Matching buyers and sellers
- Credit rating
- Access to financing during Covid-19

# Action Plan: Cross Border Collaboration

19

## More Connectivity with Cross Border Digital Collaboration

### Supply Chain

- To keep supply chain opened
- To adopt higher utilization of digital trade documents

### Food Traceability

- To form partnership with foreign suppliers to ensure food traceability

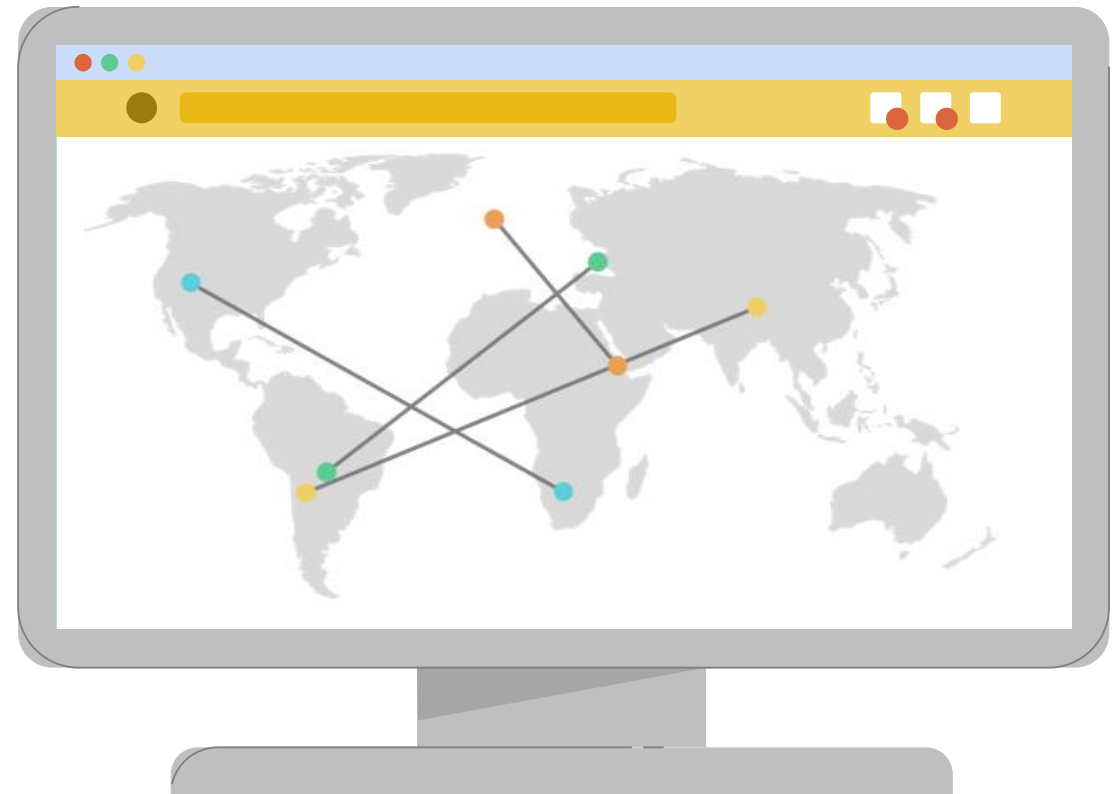

### Digital Connectivity

- To leverage on cloud and blockchain
- To achieve cross-border cooperation

### Digital Economy Agreement

- To sign partnership agreements with other countries

# Cross Border Remittance Capabilities

20

## Instruments and Horizons

### Cross-Border Payment Virtual Assets

- Distributed Ledger Technology (DLT) and cryptocurrencies
- Decentralised trust, absence of governmental regulation
- Not tagged to values of securities or currencies

### Stable Coins

- DLT and cryptocurrencies
- Tagged to securities or currencies. Lower volatility.
- 'Trusted' forms of coins
- E.g. Libra by Facebook

### Central Bank Digital Currencies

- CBDC: Central Bank Digital Currency
- CBDC in China – DC/EP by PBoC
- High regulation imposed

### Short Term

- Cross-Border Payment Tokens and Virtual Assets

### Medium Term

- Stable Coins
- CBDCs

### Long Term

- Regional Cooperation of CBDCs

# Overview of Action Plan

7

## A Summary of the Pain-points and the Action Plan

### ◆ **Connect the Unconnected**

- To adopt Mesh Network
- To adopt Satellite and Mesh Boxes

### ◆ **Digital Identity**

- To adopt Self Sovereign Digital Identity

### ◆ **Travel**

- To adopt Travel with Health Screening
- To adopt Zoning
- To adopt Flight Pass

### ◆ **Trade**

- To enhance Digital Connectivity
- To keep supply chain opened

### ◆ **Fintech and Digitalisation**

- To offer Education and Grant
- To provide Sustenance and Digitalization Grants for FinTech

## More About Education And Grant

### Potential to Scale Up

- Opportunity for FinTech companies and start ups to scale up during Covid-19
  - Provide solutions with Digital ID

### Transforming Business

- Corporates can scale and collaborate with startups to digitise and transform the business model

### Need for **Grants and Education**

- Education and grants are needed
- Government should provide for them at this juncture

### Seizing the Opportunity

- Opportunity to transform during this pandemics.
- Otherwise, regional economies will miss the low hanging fruits of the 4<sup>th</sup> Industry Revolution

# Action Plan: Fintech and Digitalisation Grants

22

## Offering Grants for Digitalisation and Drive Fintech

### Purpose of Grants

- For FinTech, to **ensure sustenance and growth**.
- For Digitalisation, to **foster acceleration and upskill**.

### Business Sustenance and Growth Grants

- To **reduce lay offs**
- To **assist in long term growth**

### Digitalisation Grants

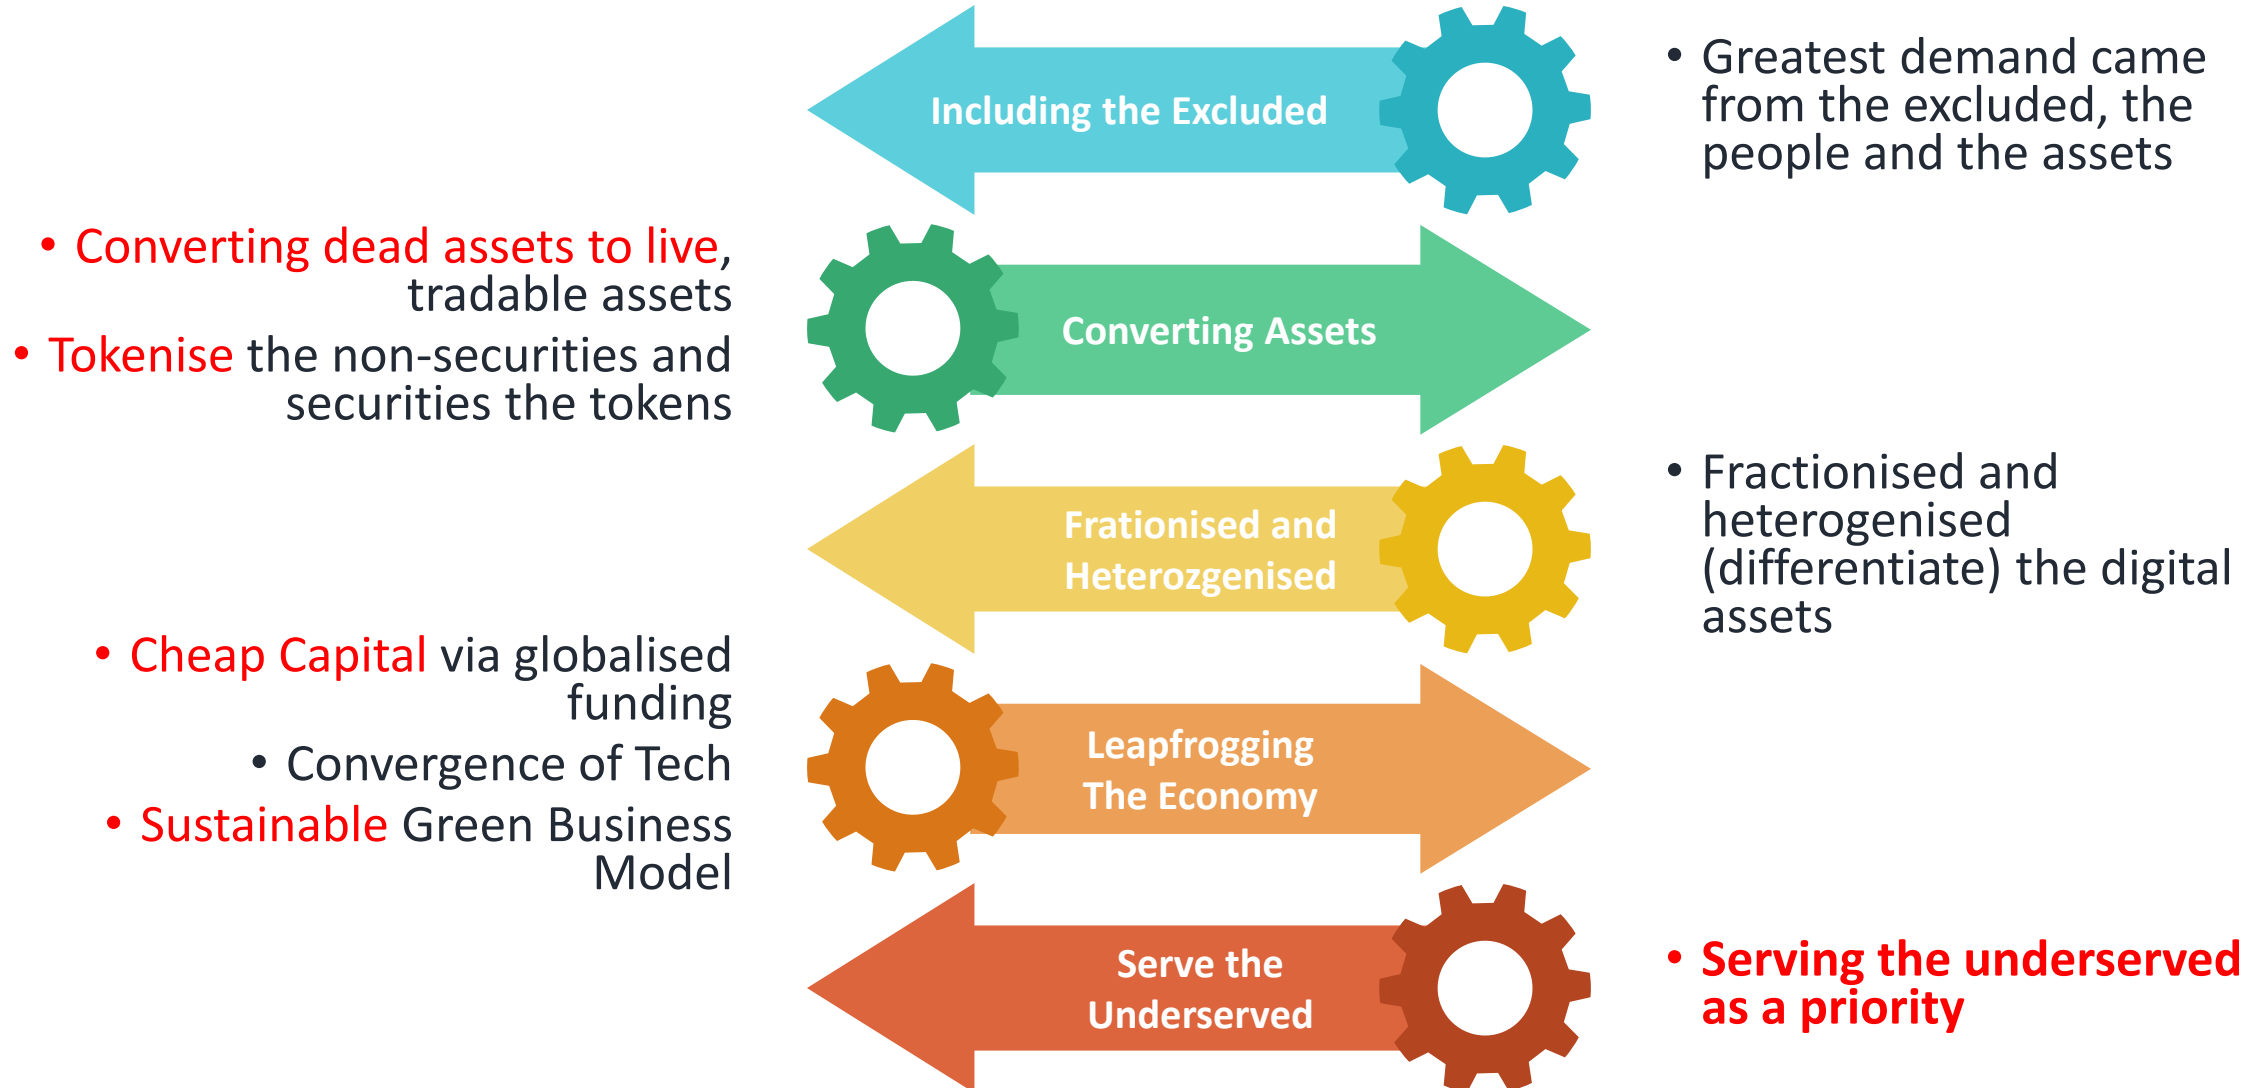

- To offer support in digitalization and creating **new products** to serve **new customers** for inclusion and scalability
- To offer **training** allowances for approved courses

# Decentralized Inclusion

23

The Appropriate Option: Low-cost, Sustainable, Scalable

## Treating Digital Infrastructure As A Public Good

### Digital Infrastructure

- The need for resource allocation for building virtual network

### National Digital Infrastructure

- Key to “**Accelerating Financial Services for Inclusion**”
- Mesh-Satellite or 3G/4G Network, Virtual Assets Service Providers Open Platform, CBDC, Open Data and API (Application Programming Interface)

### Regional Digital Infrastructure

- Key to “**Facilitating Cheaper, Secure, and Sustainable Source of Remittances, e-Trading of Digital Assets and Tokens, and Access to Capital**”
- Distributed Ledger Technology Based (Blockchain) for Cross-Border Data Storage Protection and Collaboration

# 10 Enablers

25

## Critical Enablers for Decentralized e-inclusion

1. Fast, stable  
internet/mobile/mesh  
network connectivity

2. Interoperable value  
transfer gateway

3. Privacy protection for users

4. Strong security framework

5. Open Source and Trust  
Distribution governance

6. Digital literacy and UX

7. Portable Digital ID

8. Compliance easy

9. Comprehensive data and  
Oracle ecosystem

10. Talent, knowledge and skills

Author

Modified from  
Bank Negara,  
AFI

# Singapore Narrative

Case study based on policies implemented by Singapore

# Singapore Initiative Overview

A Summary of Singapore Initiatives to be Discussed

## Project Ubin

1. CBDC and regional cooperation

## Business Sustenance Grant

2. Grant in assisting staff retention

## Business Growth Grant

3. Grant in assisting Fintech

## Digital Acceleration Grant

4. Grants in assisting company digitalise

## Training Allowance Grant

5. Training and education grants

## Digital Banking Licensing

6. License for new digital banks

## Payment Service Act

7. Governs payment

## Digital Resilience Bonus

8. Helping F&B and Retail digitalise

## ICT Sector Accelerator

9. Expand the ICT sector and provide training

## Job Support Scheme

10. Staff Retention for all companies

## Company-Led Training

11. Training and educating the workforce

## TeSA Mid-Career Advancement

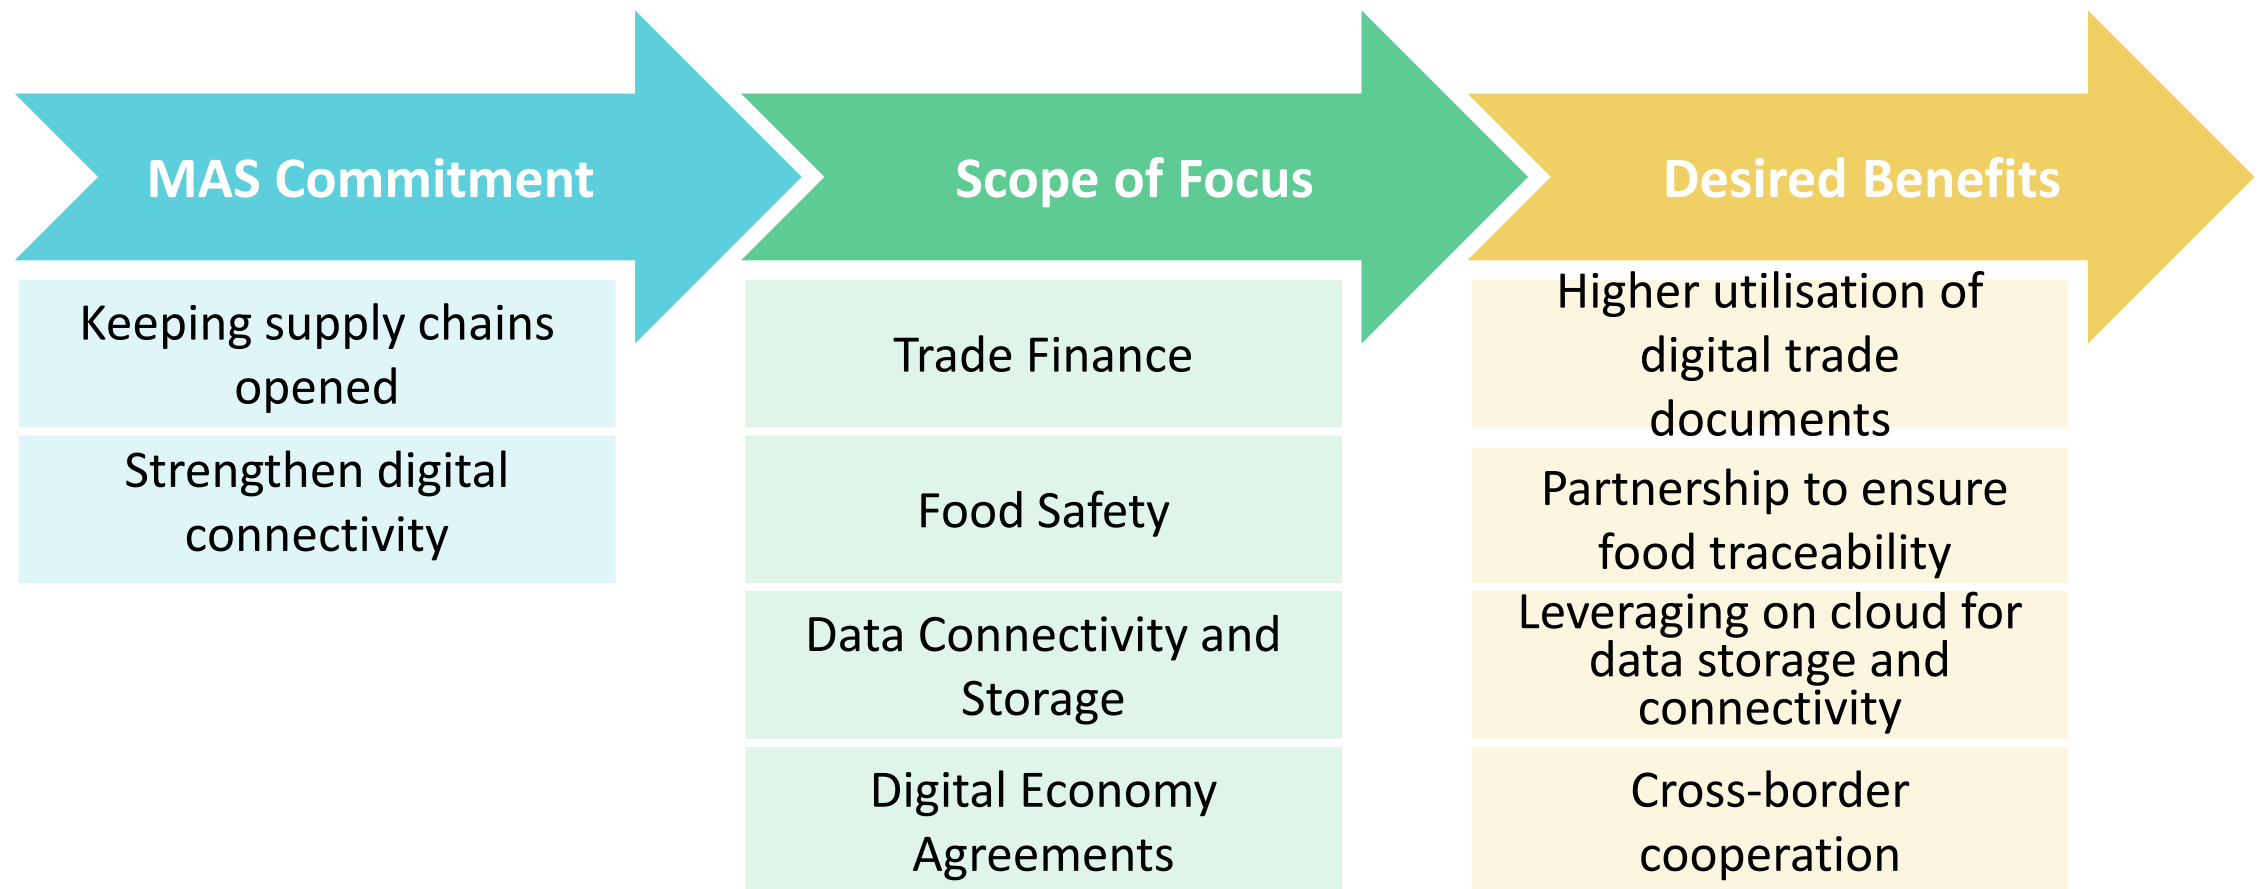

12. Train senior professionals with relevant ICT skills

# Cross Border Collaboration

## MAS Commitment Case Study

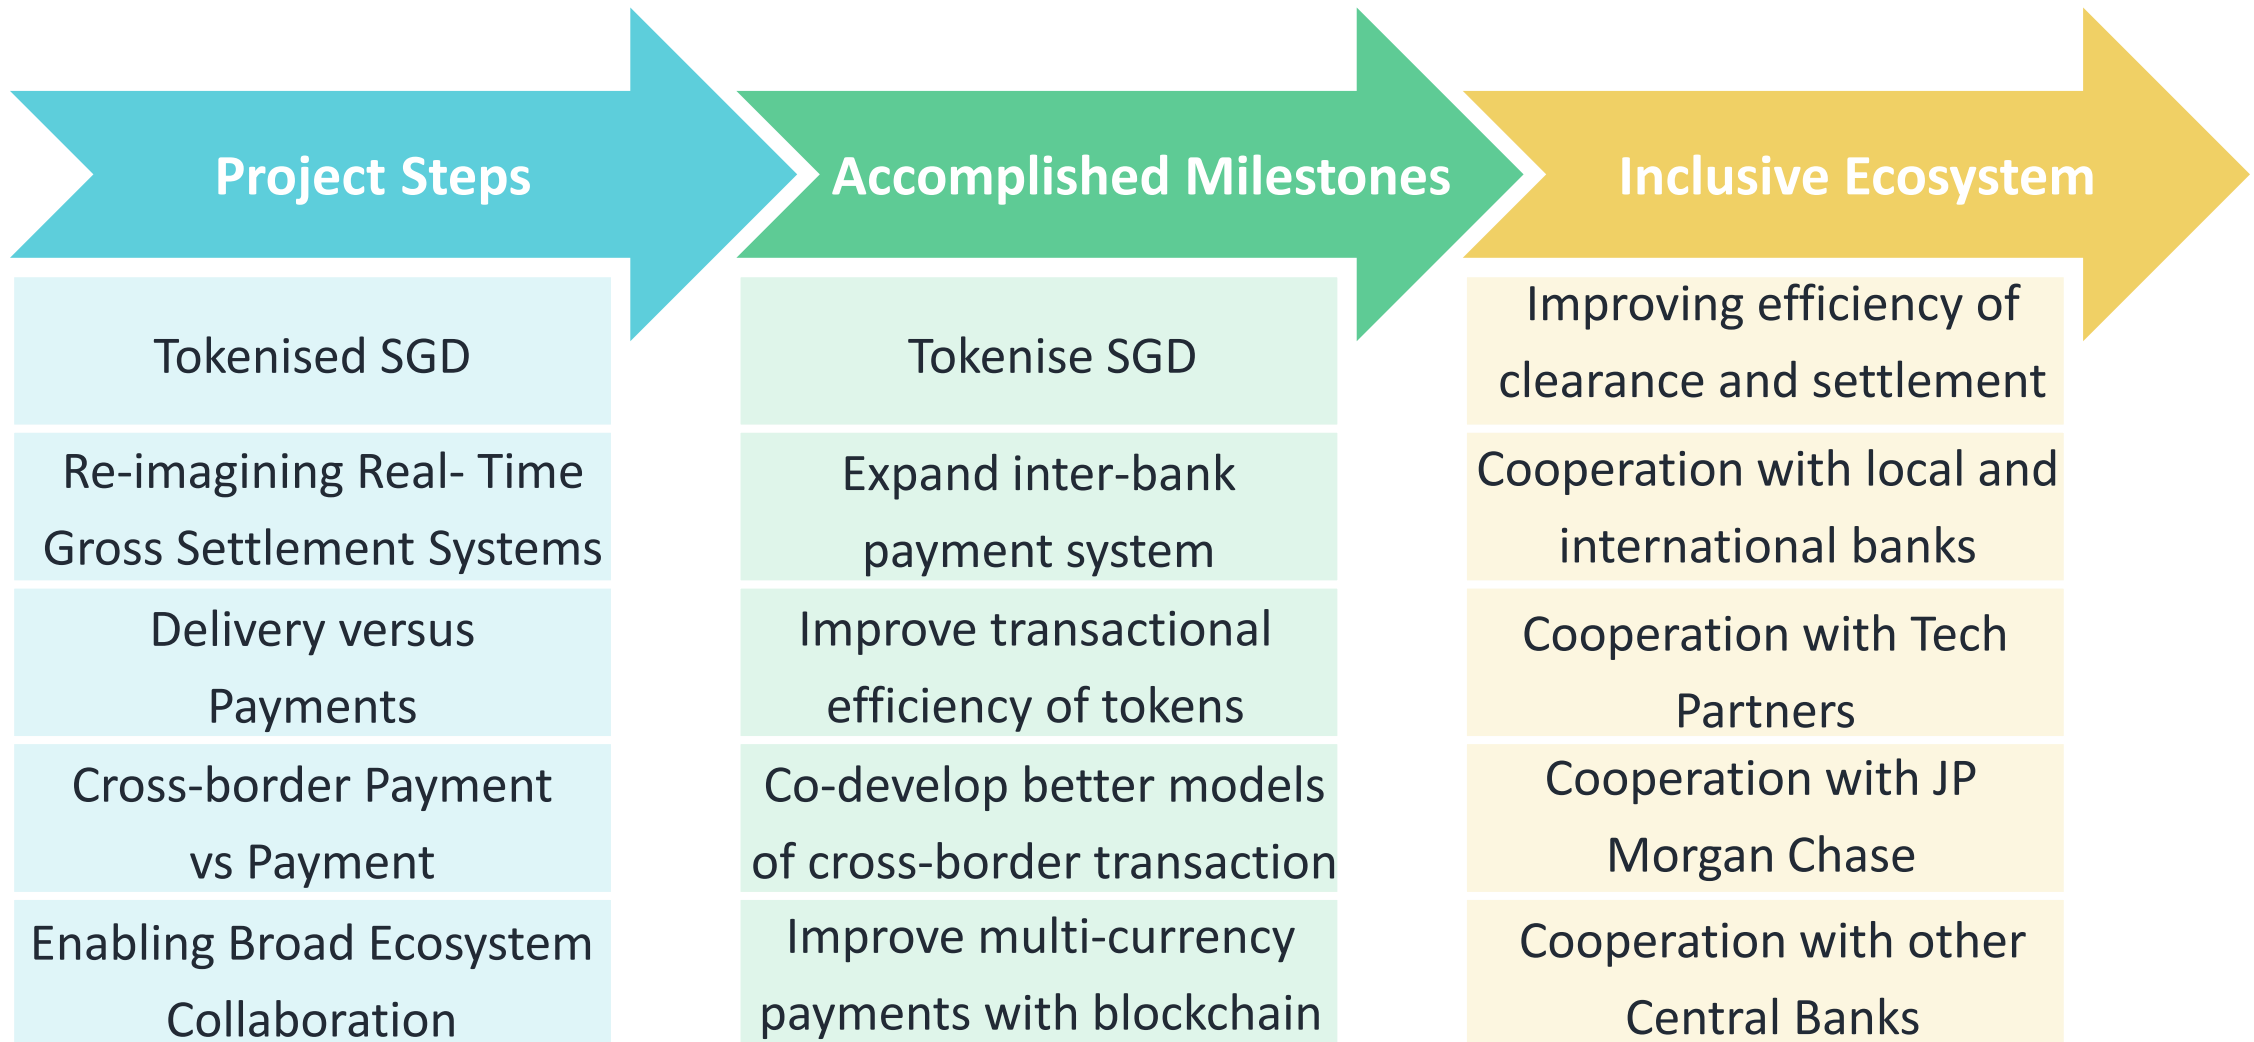

*"We Need More Connectivity, Not Less."*

*- Mr Ravi Menon, Managing Director, Monetary Authority of Singapore, 22 June 2020*

# Cross Border Remittance Capabilities

Singapore Case: Project Ubin

# FinTech and Digitalisation

30

## MAS Commitment to Fintech and Digitalisation

*“FinTech firms have a great opportunity to step up actively during this period.”*  
- Sopnendu Mohanty, Chief FinTech Officer of MAS

### Business Sustenance Grant

- Grant each firm up to S\$20,000 to cover work expenses
- Help Fintech firms reduce lay offs

### Business Growth Grant

- S\$4.5m grants assisting in improving Fintech long term growth
- Focus on innovation and partnerships

### Digital Acceleration Grant

- Support smaller financial institution and Fintech
- Funds expenses in customizing digital solutions for their firms

### Training Allowance Grant

- Training grants for employees within Fintech firms and financial institutes during the pandemic
- S\$15/hr of training allowance
- 90% subsidy on approved courses

# Regulations and Initiatives

## Case Study: Monetary Authority of Singapore

### Digital Bank Licensing

- Issued up to 2 digital full bank licenses and 3 digital whole bank license
- Ensuring that Singapore's banking sector continues to be resilient, competitive and vibrant

### Payment Service Act

- Governs digital payment services, like digital payment tokens
- Focus on risk regulations
- Forward looking initiative

### Education Initiatives and Support

- Establishment of Asian Institute of Digital Finance (AIDF) in a joint development led by MAS.
- Publish advisories and relevant guidelines to advice financial institutes
- New Training Allowance Grant (TAG)

# Singapore Budget 2020

## Budget 2020 and Related Initiatives

### Staff Retention

- Job Support Scheme
- S\$15b pay-out to support employee wages
- 140k employers & 1.9m employees reached

### Business Model

- New Digital Resilience Bonus
- Hawkers go Digital Initiative
- Digitlise the F&B industry and Retail Industry

### Singapore Budget 2020

- Resilience Budget
- Solidarity Budget
- Fortitude Budget

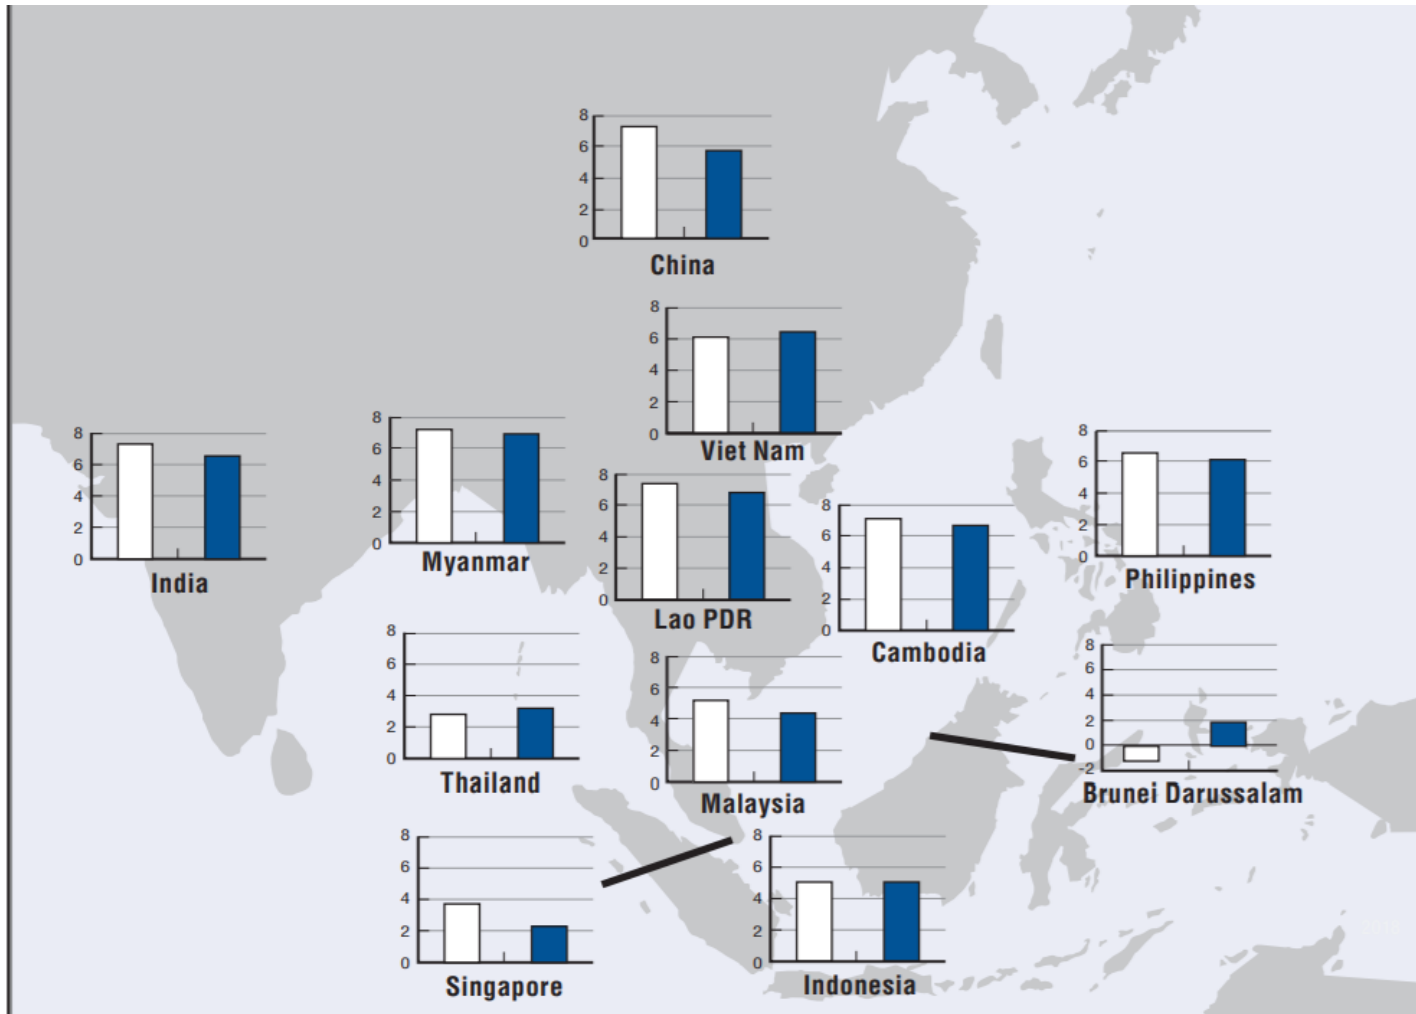

### Expand ICT Sector

- ICT Sector Accelerator Programme
- TeSA Mid-Career Advance Programme
  - 3.5% expansion in ICT sector
- Train senior professionals with ICT related skills

### Training & Education

- Company- Led Training Programme
- Place 3,000 workers in ICT by 2023
- Train skills such as 5G, IOT, Cloud...

# ANNEX

Real GDP  
Growth in  
Southeast  
Asia, China  
and India

# Broadband Subscriptions

- 13 out of 100 people in the world have broadband subscriptions.

## Broadband subscriptions per 100 people

Broadband subscriptions refer to fixed subscriptions to high-speed access to the public Internet (a TCP/IP connection), at downstream speeds equal to, or greater than, 256 kbit/s.

Our World  
in Data

Source: World Bank

Note: For more details on the definition see the sources tab.

OurWorldInData.org/internet/ • CC BY

Source: World Bank and [ourworldindata.org](http://ourworldindata.org)

# Impact of the pandemic on airlines

- Percentage change in revenue from 2019 to 2020 (Per passenger and kilometers)

# Cloud to edge computing

## Cloud computing

Centralized data centers are farthest from the network edge. However, they offer a much greater density of compute, storage and networking resources.

## Edge: Local servers

Distributed servers that provide a resource-dense, low-latency access point closer to the user than the centralized cloud network.

## Edge: Internet of things

Real-time data processing within devices based on application needs. Each device will be equipped with edge sensors and chips tasked with data collection and origination; however, there are processing limitations.

As wireless operators begin lighting up next-generation 5G networks, the combination of faster mobile broadband speeds coupled with massive modern data loads is expected to drive an emerging technology: edge computing.

Edge computing aims to make data processing more efficient by cutting down on the distance that information must travel. The major U.S. wireless carriers are all testing edge processing platforms to compete for this next wave of computing, with demand driven by increased data consumption as consumers, businesses and municipalities embrace a growing number of connected devices, and the internet of things expands.

# Ease of Doing Digital Business

- US and UK ranked the top of 42 countries.

Source: [Harvard Business Review](#)

Source: Digital Planet research initiative,  
The Fletcher School at Tufts University

# Digital Infrastructure Investment in China

- China is expecting over the next five years to top more than CNY27.1 trillion (US\$3.78 trillion) in new infrastructure construction and related investments, which amounts to an average of \$63 billion per month between 2020 and 2025. In 2020, as much as CNY3 trillion (\$423 billion) are to be invested already in new projects, benefiting 5G base stations, data centres, industrial internet, artificial intelligence, new energy vehicle charging infrastructure, and intercity high-speed rail network. As many as 20 provincial-level regions have unveiled plans with Shanghai planning to spend around \$37.7 billion in the next three years.
- Governments in China are investing and supporting fintech startups. For example, Guangzhou Municipal Government has given the Chinese AI startup CloudWalk \$301 million grant.
- China is one of the only two countries with a nationwide rollout of 5G so far, and the other is South Korea. China's 5G user base has exceeded 85 million, ranking first in the world. As of February, Huawei had obtained 91 5G commercial contracts worldwide and shipped more than 600,000 5G Massive MIMO active antenna units, the backbone of 5G networks. Three Chinese telecom operators have tripled their investment in 5G over the past year. The coronavirus epidemic has stimulated China's policy support for 5G, along with consumers' increasing demand for a faster internet during telecommuting, online education and livestreaming. In November 2019 China announced the formation of a research team dedicated to 6G.

# Actions in Europe

- **Digital Education Action Plan:** 11 actions with the following three priorities to support the use of technology in education and the development of digital competences.
  - Making better use of digital technology for teaching and learning
  - Developing digital competences and skills
  - Improving education through better data analysis and foresight
- **FinTech Action Plan:** initiatives to establish a more competitive and innovative financial market.
  - Enabling innovation business models to reach EU scale
  - Supporting the uptake of technological innovation in the financial sector
  - Enhancing security and integrity of the financial sector

# Mesh Topology

- A mesh topology is a network setup where each computer and network device is interconnected with one another.
- This topology setup allows for most transmissions to be distributed even if one of the connections goes down.
- It is a topology commonly used for wireless networks
- There are two forms of this topology: full mesh and a partially-connected mesh.
- Mesh can manage high amounts of traffic, because multiple devices can transmit data simultaneously.
- A failure of one device does not cause a break in the network or transmission of data.
- Adding additional devices does not disrupt data transmission between other devices.
