The countries listed in this presentation do not imply any view on ADB's part as to sovereignty or independent status or necessarily conform to ADB's terminology.*

## Background

## Objectives

- ✓ The fatal crash rate per capita of 16.5 deaths per 100,000 inhabitants

### Registered crashes

1. To **understand** more about the causes and characteristics of rural road crashes in Mongolia
2. To **identify** the main knowledge gaps across the 5 pillar in Mongolia
3. To **identify** key steps for Mongolia in promoting road safety

91 % of all crashes occur in Ulaanbaatar, 73% of fatal crashes occur in rural areas.

Pillar 1:  
Road safety management

Pillar 2:  
Road infrastructure

Pillar 3:  
Vehicle safety

Pillar 4:  
Road user behavior

Pillar 5:  
Post crash care

**Pillar 1:**  
Road safety management

**Pillar 2:**  
Road infrastructure

**Pillar 3:**  
Vehiclesafety

**Pillar 4:**  
Road user behavior

**Pillar 5:**  
Post crash care

1

Data collection and use

Collaboration mechanism among different department

### Knowledge gaps

- Robust and informative data collection

Q: What relevant data are not recorded?

- Fill the knowledge gap of member of committee

Improvements in the coordination, legislation, road safety engineering, and data systems.

### Knowledge gaps

- Data collection
- Collaboration mechanism among different department.

### MRTD perspectives

- Quality of data
- Number of traffic police is not enough

### Further detailed research

- Minimum crash data elements by MMUCC, CADAS, WHO, APRSO
- Data center which MRTD proposed

Pillar 1:  
Road safety management

**Pillar 2:  
Road infrastructure**

Pillar 3:  
Vehicle safety

Pillar 4:  
Road user behavior

Pillar 5:  
Post crash care

- 2 Safer roads and road network via engineering solutions  
Black spots, Road Safety Audits and Assessments

### Knowledge gaps

- Road Safety Audit: Black spots
  - No certification system for road safety auditors
  - Weak legal foundation
- Lack of gathering information and data in the rural areas

### Knowledge gaps

- Road safety audit
- Data on rural roads

### MRTD perspectives

- Road safety audit is still new concept
- Quality of road infrastructure

### Further detailed research

- Safety barrier: flexible barrier, semi-rigid barrier, **rigid barrier**.
- Roadside hazard management: Safety barrier can be a hazard

(Source: APRSO, 2020)

Pillar 1:  
Road safety management

Pillar 2:  
Road infrastructure

Pillar 3:  
Vehicle safety

Pillar 4:  
Road user behavior

Pillar 5:  
Post crash care

### 3 Vehicle Inspection Protective Equipment

#### Knowledge gaps

- Vehicle inspection: More than 70% of the vehicle fleet is more than 10 years old.  
Left-side/right side steering wheel position, almost at 50% distribution.
- Information and awareness campaigns  
Q: What is the challenge collaborating education and police enforcement to arise awareness?

#### Knowledge gaps

- Vehicle inspection
- Information and awareness campaigns

#### MRTD perspectives

- 60% distribution RHD
- Taxation: import tax, usage tax
- Risk management: risk of getting into crash.

#### Further detailed research

- Convert steering wheel right to left (3000\$ per car)
- Australia, Bangladesh, Kenya, New Zealand, and Singapore
- Georgia or Kyrgyzstan, changing the traffic side as in the case of Sweden

Pillar 1:  
Road safety management

Pillar 2:  
Road infrastructure

Pillar 3:  
Vehicle safety

Pillar 4:  
Road user behavior

Pillar 5:  
Post crash care

3

## Sweden:

- Left hand traffic and Left-hand drive vehicles- switched from left to right traffic in 1967.
- Results show that right-hand traffic decreased road fatality, injury and accident risk by approximately 30 percent

### Changing lanes

A driving tweak with huge requirements

BBC  
capital

360,000

Number of road signs moved

5<sup>th</sup>

Position of hit Dagen H song on Swedish music charts

628.3m

Project cost in kronor, equivalent to 2.6bn kronor (\$308m) today

8,000

Number of buses reconfigured

Sources: Swedish Transport Agency, Stockholm Transport Museum, Sveriges Radio

### Further detailed research

- Convert steering wheel right to left (3000\$ per car)
- Australia, Bangladesh, Kenya, New Zealand, and Singapore
- Georgia or Kyrgyzstan, changing the traffic side as in the case of Sweden

Pillar 1:  
Road safety management

Pillar 2:  
Road infrastructure

Pillar 3:  
Vehicle safety

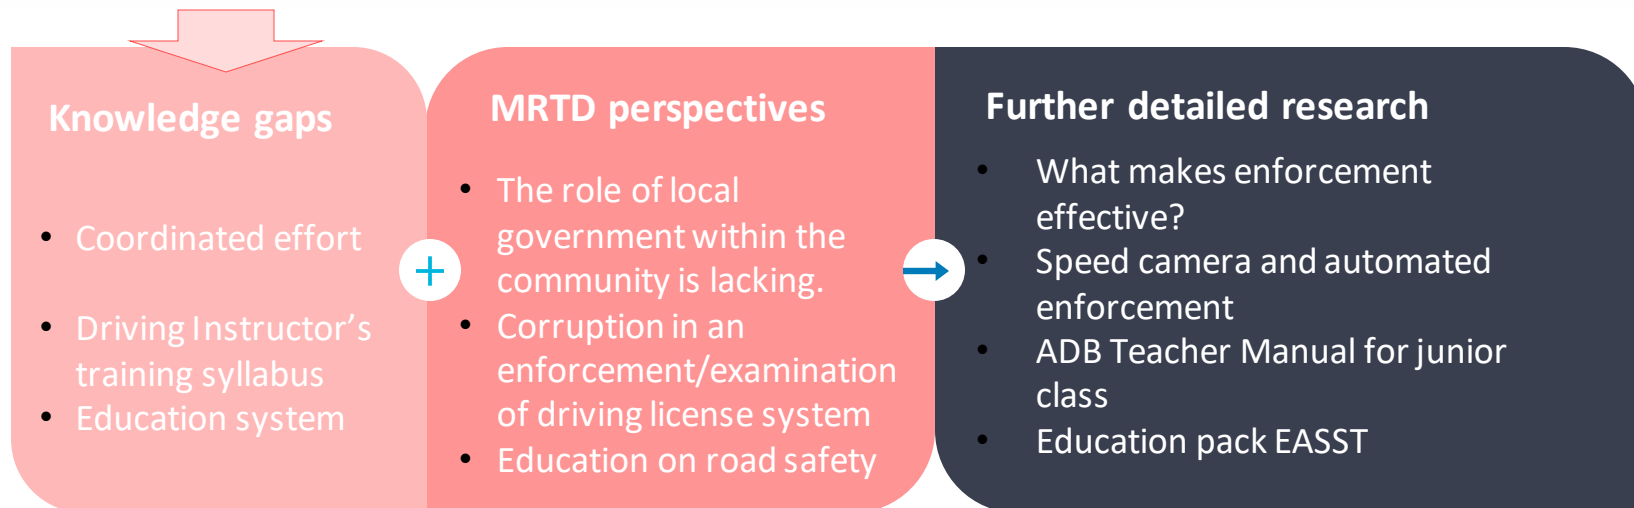

Pillar 4:  
Road user behavior

Pillar 5:  
Post crash care

- 4 Enforcement: Together with engineering and education  
Safe Drivers: Educating and re-educating the existing road users  
Campaigns and Awareness

### Knowledge gaps

- There is a lack of coordinated effort: enforcement + education + engineering
- Driving Instructor's training syllabus: examination system, law and centralization of systems.

Pillar 1:  
Road safety management

Pillar 2:  
Road infrastructure

Pillar 3:  
Vehicle safety

Pillar 4:  
Road user behavior

**Pillar 5:  
Post crash care**

## 5 Emergency treatment and long-term rehabilitation for crash-victims.

### Knowledge gaps

- Ambulance response time: submission rate
- Quality of the emergency service

### Knowledge gaps

- Ambulance response time
- Quality of the emergency service

### MRTD perspectives

- In 2020, first aid service in the rest stops
- Develop and build standardized rest areas
- Telephone box in rural areas

### National center for public health

- Improve first aid courses in order to obtain driver's license
- Training courses for police officers
- Infrastructure is absent

Pillar 1:  
Road safety management

Pillar 2:  
Road infrastructure

Pillar 3:  
Vehicles safety

Pillar 4:  
Road user behavior

**Pillar 5:  
Post crash care**

## 5 Emergency treatment and long-term rehabilitation for crash-victims.

### Knowledge gaps

- Ambulance response time: submission rate
- Quality of the emergency service

### Knowledge gaps

- Ambulance response time
- Quality of the emergency service

### MRTD perspectives

- In 2020, first aid service in the rest stops
- Develop and build standardized rest areas
- Telephone box in rural areas

### National center for public health

- Improve first aid courses in order to obtain driver's license
- Training courses for police

### Further detailed research

- Advanced Driver-Assistance Systems
- First aid training system in Mongolia
- Training combined with legislation or policy

## What Mongolia and ADB have been done?

### Road Safety Policy and Action Plan

White paper | Standards | Manuals 2018

### National Road Safety Council

Under MRTD | Headed by PM 2019

### Asian-Pacific Road Safety Observatory

Membership | Road Safety 2020

### Institutional Strengthening for Road Safety

Road safety Council | Road safety management 2020

## What Mongolia and ADB have been done?

- Far from optimal
- Setting up the mechanism to the council
- Safe system approach to addressing road safety issues

### Road Safety Policy and Action Plan

White paper | Standards | Manuals 2018

### National Road Safety Council

Under MRTD | Headed by PM 2019

### Asian-Pacific Road Safety Observatory

Membership | Road Safety 2020

### Institutional Strengthening for Road Safety

Road safety Council | Road safety management 2020

# Recommendations

# Safe System Approach

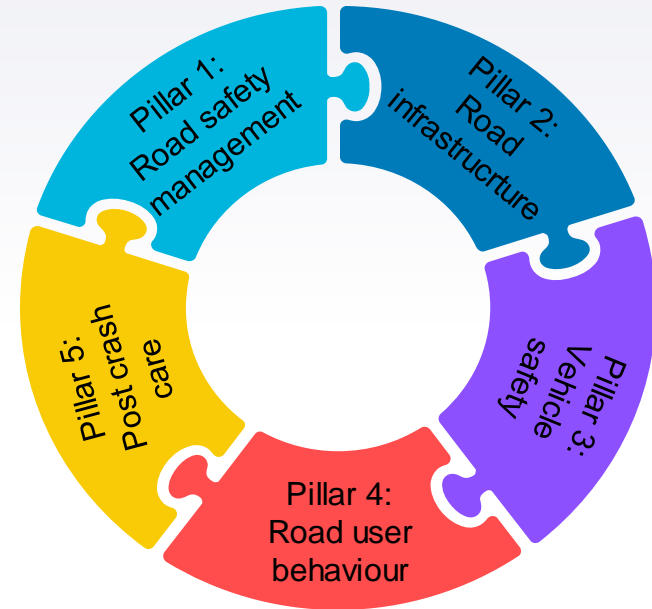

## Accept people's mistakes

Crashes might potentially happen in the future and

## Multiple contributing factors

Identify all possible ways how such crashes can be prevented.

Understanding and managing the complex and dynamic interaction between operating speeds, vehicles, infrastructure and road user behavior →

# Summary of Recommendations

Robust data collection

Collaboration among different department

Actively track and follow up on black spots

Legislation of road safety audit

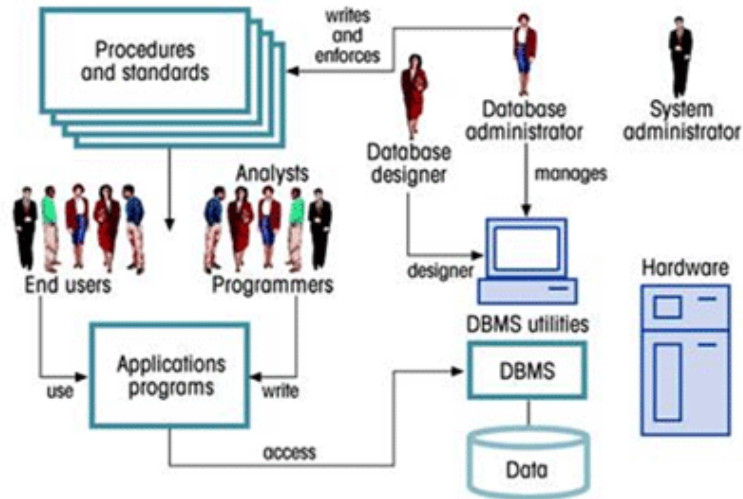

Improving road safety infrastructure

RHD and old car Vehicle inspection

Education and training  
Enforcement efforts  
Awareness Campaigns

Introduce first aid courses

- Work on improving data sharing as both entities collect relevant accident data
- Development of data center with data crash elements
- Practical operating procedure to work in a systematic way

THE DATABASE SYSTEM ENVIRONMENT

# Summary of Recommendations

Robust data collection

Collaboration among different department

Actively track and follow up on black spots

Legislation of road safety audit

Improving road safety infrastructure

RHD and old car  
Vehicle inspection

Education and training  
Enforcement efforts  
Awareness Campaigns

Introduce first aid courses

| Safety issues            | Message   | Recommendations  |
|--------------------------|---|--|
| <b>Safety barrier</b>    | Much of the benefit from the use of barriers comes from a reduction in crash severity | Safety barrier can be a hazard<br>Replace or ensure all rigid bollard  |
| <b>Alignments</b>        | Improper alignments lead to accident in unknown and unfamiliar areas for the drivers  | Actively track and follow up on black spots<br>keep H and V alignments as consistent as possible, and watch intersection layouts |
| <b>Confusing signage</b> | Driver confusion, cause significant damage  |  |
| <b>Speed management</b>  | Two cameras have been installed.  | Add speed check cameras in rural areas and black spots.<br>Use regulatory speed restriction signs consistently                   |

# Summary of Recommendations

Robust data collection

Collaboration among  
different department

Actively track and follow  
up on black spots

Legislation of road safety  
audit

Improving road safety  
infrastructure

RHD and old car  
Vehicle inspection

Education and training  
Enforcement efforts  
Awareness Campaigns

Introduce first aid  
courses

- High taxation
- Convert steering wheel right to left
- Raise awareness of danger of driving RHD
- Change the traffic direction
- Adding vehicle inspection centers

# Summary of Recommendations

Robust data collection

Collaboration among different department

Actively track and follow up on black spots

Legislation of road safety audit

Improving road safety infrastructure

RHD and old car Vehicle inspection

Education and training  
Enforcement efforts  
Awareness Campaigns

Introduce first aid courses

## Case study: Improve road safety for school children in Ger area.

- Improving education system on road safety
- Joint media and enforcement campaigns (YOUTH driven)
- Keep the training section regularly
- Enforcement + Education + Engineering  
Speed camera
- Driving Instructor's training syllabus

# Summary of Recommendations

Robust data collection

Collaboration among different department

Actively track and follow up on black spots

Legislation of road safety audit

Improving road safety infrastructure

RHD and old car Vehicle inspection

Education and training  
Enforcement efforts  
Awareness Campaigns

Introduce first aid courses

- Training the first responders such as traffic police  
Training combined with policy, legislation, or certification
- Driving Training syllabus: first aid course
- Telephone box in rural areas
- Develop rest areas and supply with first aid tools, and introduce training courses

# ROAD TO ZERO

A blue rectangular graphic with the text "ROAD TO ZERO" in white, bold, sans-serif font. The word "ROAD" is on the top line, and "TO ZERO" is on the bottom line. The letter "O" in "ZERO" is replaced by a white circle containing a black road with a white dashed center line that leads towards the bottom right. Green leafy branches are scattered around the text.

THANK YOU  
FOR YOUR  
ATTENTION!

Any questions?

# APPENDIX

## List of data required by MRTD

### a. Ministry of health

1. Name, age, gender, education, address, workplace
2. Accident date, date of arrival to the hospital, alcohol related accident
3. location of the accident, reason of the accident, type of vehicle
4. Pedestrian or driver, Seatbelt and helmet used
5. Injury severity, Type of medical services provided

### b. Ministry of social welfare

1. List driving school
2. Information about driving instructor
3. Driving test center's practice site information

### c. Department of Police

List of data that could add to data center (MRTD)

1. Driver's registration information
2. Traffic accident and case registration information
3. Registration and information on damage caused by traffic accidents
4. Information on the actions taken in accident

List of data required by MRTD

1. Vehicle-related registration and information
2. Vehicle inspection information
3. Qualified driver information
4. Local bus transportation information
5. State and local road information
6. Road sign information
7. International and local railway transport information

### d. National Center for Road Transport

1. Intercity passenger information
2. Local freight information
3. Local freight and passenger traffic control data
4. Auto service registration information /Local/

List of data required by MRTD

1. Information on national road signs, markings and location of damage
2. Traffic accident and case registration information
3. Driver registration information
4. Information on international and local railway passenger planning

|                            | Crash Data Elements  | WHO | MMUCC | CADAS | APRSO Task Force |
|----------------------------|--|-----|-------|-------|------------------|
|                            | <u>Time of Roadway Clearance</u>   |     |       |       |                  |
| Reason of the crash        | First Harmful Event  |     |       |       |                  |
|                            | Location of First Harmful Event Relative to the Trafficway                       |     |       |       |                  |
| With more detailed numbers | Number of Motor Vehicles Involved  |     |       |       |                  |
|                            | Number of Motorists  |     |       |       |                  |
|                            | Number of Non-Motorists  |     |       |       |                  |
|                            | Weather conditions   |     |       |       |                  |
|                            | Hit and Run  |     |       |       |                  |
| Road related               | Bridge/Structure identification number   |     |       |       |                  |
|                            | Roadway curvature  |     |       |       |                  |
|                            | Road functional class (e.g. national road, local road, among others)             |     |       |       |                  |
|                            | Road surface conditions  |     |       |       |                  |
|                            | Type of intersection   |     |       |       |                  |
|                            | Carriageway type   |     |       |       |                  |
|                            | Junction (e.g. at-grade crossroad, at-grade roundabout, among others)            |     |       |       |                  |
|                            | Traffic control at junction (e.g. traffic police, traffic light, among others)   |     |       |       |                  |
|                            | Road curve (e.g. tight curve, open curve, among others)                          |     |       |       |                  |
|                            | Road segment grade (e.g. steep gradient or not)                                  |     |       |       |                  |
| Vehicle related            | Vehicle model year of manufacture  |     |       |       |                  |
|                            | Vehicle maneuver   |     |       |       |                  |
|                            | Vehicle steering wheel position  |     |       |       |                  |
|                            | Traffic unit maneuver (includes vehicle and pedestrian)                          |     |       |       |                  |
|                            | Seating position   |     |       |       |                  |
|                            | Air bag deployed   |     |       |       |                  |
| Crash related              | First point of impact  |     |       |       |                  |
|                            | First object hit in carriageway  |     |       |       |                  |
|                            | First object hit off carriageway   |     |       |       |                  |
|                            | Speeding related   |     |       |       |                  |
|                            | Impact type/ Collision Type (e.g. Rear end, Head on, Angle Impact, among others) |     |       |       |                  |
