

ADB Regional Initiative for the East Asian - Australasian Flyway

EAAFP Secretariat

Doug Watkins , Chief Executive

2021_12_06

Global Conventions directly relevant to National Governments of the EAAFP and the ADB Regional Flyway Initiative

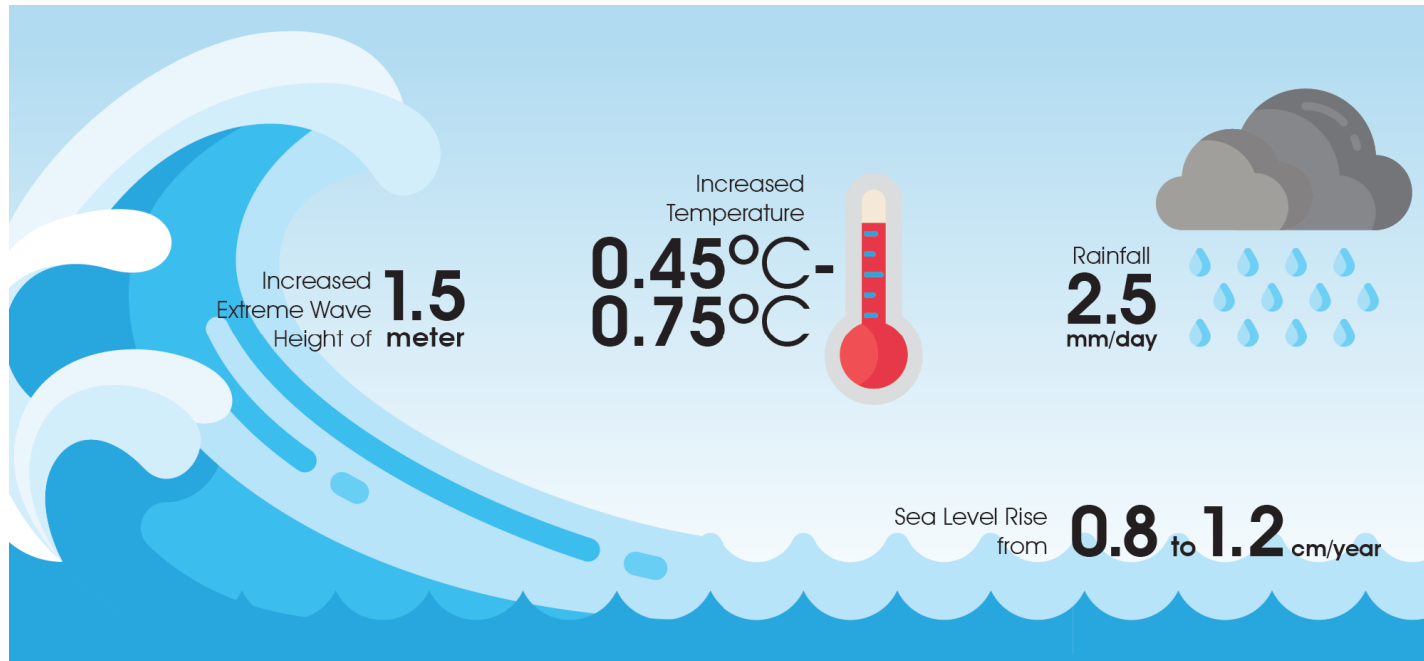

- 1. Ramsar Convention** – maintain the “ecological character” of Ramsar Listed Wetlands.
- 2. Convention on Biological Diversity** - National Biodiversity Strategies and Action Plans (NBSAPs).
- 3. Convention of Migratory Species** (Mongolia, Bangladesh, Philippines).

EAAFP

Global Conventions relevant to National Governments of the EAAFP

4. UNFCCC - (National Adaptation Plans) Very relevant due to carbon storage in wetlands and the opportunity to address adaptation options to minimise the impacts of climate change on international important wetlands for migratory waterbirds. Opportunity to also address local livelihoods that rely on these wetlands.

INDONESIA NATIONAL ADAPTATION PLAN (2019)

© Waterbirds Network

EAAFP OBJECTIVES

DEVELOP

the **Flyway Site Network** of international importance for the **conservation of migratory waterbirds.** (151)

ENHANCE

Communication, Education and Public Awareness (CEPA) of the values of migratory waterbirds and their habitats.

ENHANCE

Flyway research and monitoring activities, build knowledge and promote **exchange of information** on waterbirds and their habitats.

BUILD

Habitat and waterbird management capacity of **natural resource managers, decision makers** and **local stakeholders.**

DEVELOP

Especially for **priority species and habitats**, flyway wide approaches to enhance the **conservation status of migratory waterbirds.**

INDONESIA NATIONAL ADAPTATION PLAN (2019)

- For developing countries, especially **Indonesia**, **climate change adaptation is no longer an option, but a priority for sustainable development.**
- Therefore, the **involvement of all stakeholders must be inclusive and efficient.**
- As a national strategic plan, RAN API has four priority sectors for **climate change adaptation**, the **marine and coastal, water, agriculture, and health.**
- In the **implementation of climate resilience** development of those priority sectors, there 4 clusters of adaptation strategies (**infrastructure, technology, capacity building, and governance**).
- The clusters need to consider (embedded) **gender sensitivity and vulnerable groups, ecosystem based, landscape-based or spatial, as well as financial innovation.**

INDONESIA NATIONAL ADAPTATION PLAN (2019)

- **Local Governments**

- Solves local issues.
- Improve local capacity.
- Finance local plans and program.
- Strengthen local institutions.
- Prevent local climate hazard and damage.

- **Research Institute/ Higher Education**

- Contribute to solves climate change issues in human system and vulnerable ecosystem in national and sub-national level.
- Improve national and local capacity to cope with climate change.
- Develop national and local approach in coping climate change by developing proper perspectives. Non-Government Organization/NGO
- Facilitate local community organization and identify actions for local needs.
- Finance local program and development projects.
- Improve capacity (example: facility, finance, human, institution).
- Strengthen local institutions.

Mission of EAAFP

The Partnership provides a flyway wide framework to **promote dialogue, cooperation and collaboration between a range of stakeholders** including all levels of governments, site managers, multilateral environment agreements, technical institutions, UN agencies, development agencies, industrial and private sector, academy, non-government organizations, community groups and local people to conserve migratory waterbirds and their habitats in the East Asian – Australasian Flyway (EAAFP).
