# Learning from the workshop

- ▶ During the week of training, ADB and LX corporation introduced an overview of NSDI and its components, and presentations related to planning, tax, valuation, .... and experiences from ADB member countries (Nepal, Cambodia, ...).
- ▶ We found the presentations very useful and learned the important lessons. In order to build e-government, it is necessary to have a national database system and the most important thing is that E-Government have to build a legal framework, and clearly define the responsibilities of other Department or Ministry in the process to build and develop NSDI system
- ▶ The components of databases in NSDI need to be built synchronously and in an open direction to be shared among other Department and aimed at providing services to the people.
- ▶ There is a need for a long-term strategy in the development of the country's NSDI when software technologies are obsolete.
- ▶ Considering public-private partnership (PPP) in case that private Company involve to build some component databases to reduce financial pressure on Government and increase efficiency.

# Suggestion ....

- ▶ We hope that ADB and LX Corporation will continue to organize annual workshop so that member countries of ADB can have a opportunities to learning and sharing experiences.
- ▶ The workshop in next time, we are thinking to focus on more technical such as planning, tax, evaluation, ....
- ▶ Enhance experience sharing activities of countries that have succeeded in building, operating and exploiting NSDI.
- ▶ ADB, LX corporation can be cooperate with Vietnam to build projects related to spatial planning and land use planning (planning the use of different types of land for socio-economic development).

THANK YOU SO MUCH
