# Climate Change Adaptation in Hill Torrents of Punjab

## OUTLINE OF PRESENTATION

- **INTRODUCTION OF AREA**
- **PROBLEM STATEMENT**
- **IMPACT OF CLIMATE CHANGE**
- **CLIMATE CHANGE ADAPTATION**

# Climate Change Adaptation in Hill Torrents of Punjab

## PROJECT AREA

# Climate Change Adaptation in Hill Torrents of Punjab

## PROBLEM STATEMENT

- Hill Torrents floodwater in high flow season of Monsoon spreads out across the Piedmont (pachad) region and accumulates along the right embankment of the Kachhi Canal.
- The gushing flow of these Hill Torrents causes damage to irrigated lands, crops, houses, and public and private infrastructure in the Pachad area.
- After passing through cross-drainage structures of Kachhi and D.G. Khan Canals and induced cuts, the floodwater frequently leads to disasters in command areas of DG Khan Canal, extending all the way up to the River Indus.
- In August 2022, devastating flash floods struck the areas of Rajanpur and DG Khan Districts. The immediate infrastructure damage was followed by a long-term ponding of floodwater in the area due to restricted drainage system, complicating and prolonging the rehabilitation process.

## Flood Damages

**KACHHI BREACH AT RD 504 WITH FLOOD WATER FROM KAHA  
17 AUGUST 2022**

**KAHA PACHAD AREA  
17.08.22**

# Climate Change Adaptation in Hill Torrents of Punjab

## Comparison of Flood Discharges

# Climate Change Adaptation in Hill Torrents of Punjab

## Impact of Climate Change in Hill Torrents of Punjab

### Rainfall Results based RCMs

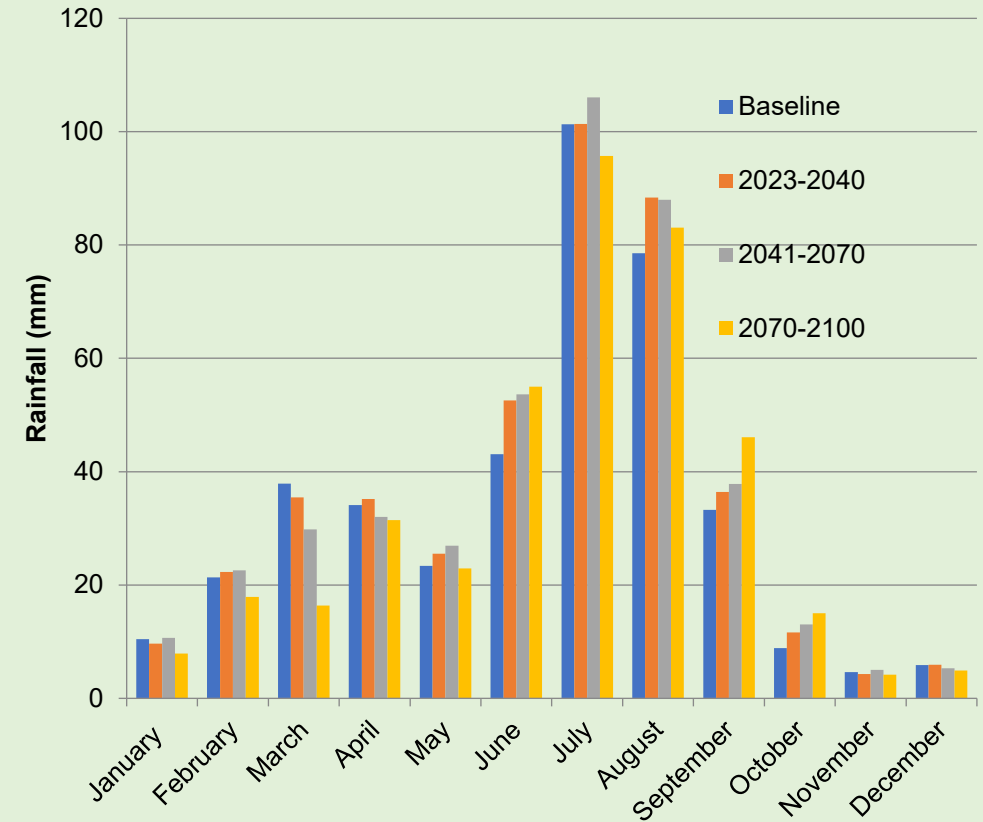

- The median scenario change projection of hill torrents in Punjab indicates the annual rainfall change in the area will not be substantial. Although there is a little increase in annual rainfall, 6.5% for 2040, and 7.% for 2070.

### Extreme Event Analysis

- An increase of 10% to 15% at all return levels may be considered in sensitivity analysis of the project's engineering design
- Any structures exposed to the flood events should be designed to withstand flood magnitude resulting from the effects of the climate change

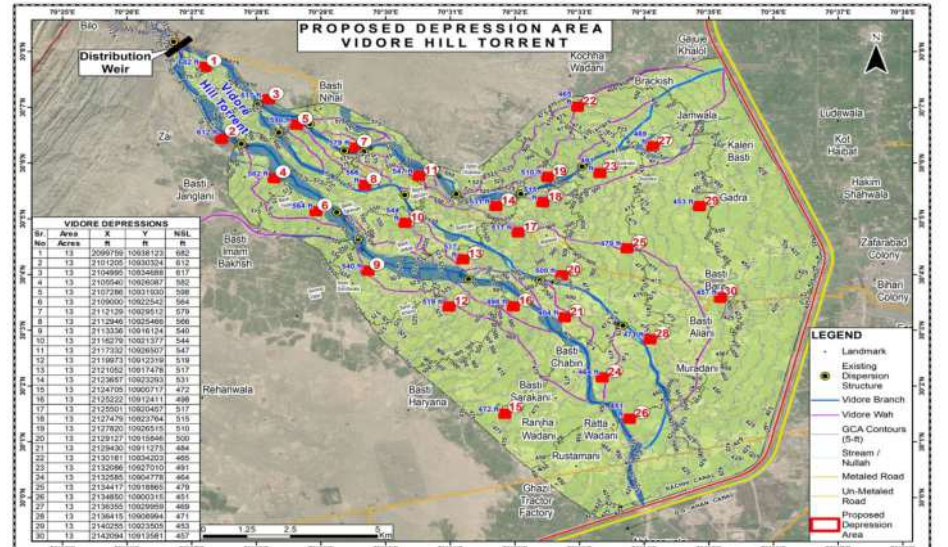

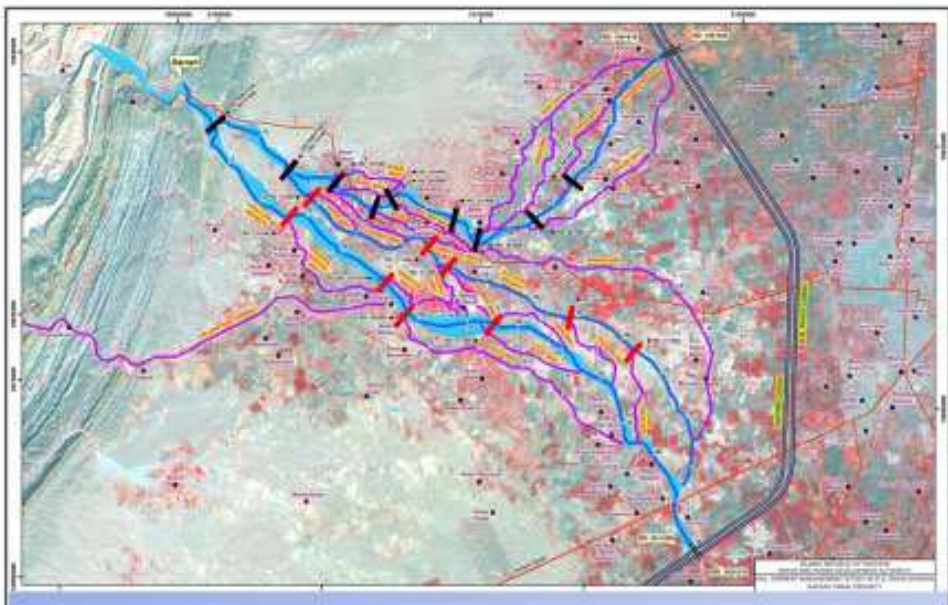

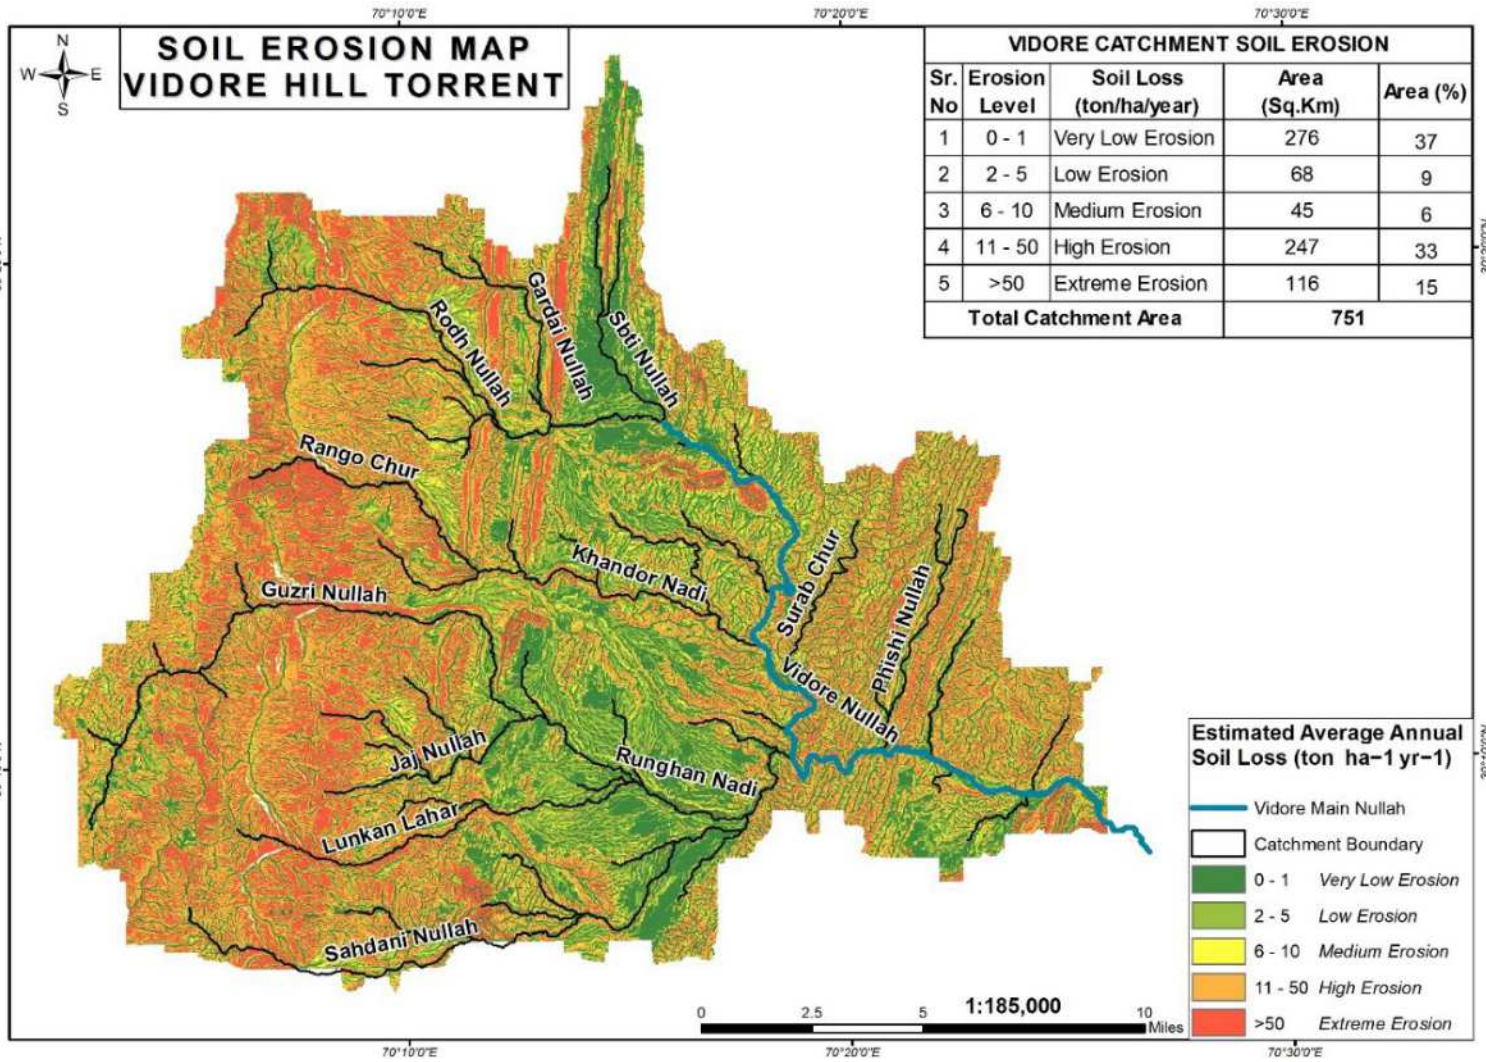

### Temp Results based on CORDEX RCMs

- For year, 2040, 2070 and 2100 there will be about 0.45, 1.64 and 1.94 °C increase in maximum temperature and 0.85, 1.84 and 2.34 °C for minimum temperature respectively

# Climate Change Adaptation in Hill Torrents of Punjab

## VIDORE - SELECTED HILL TORRENT

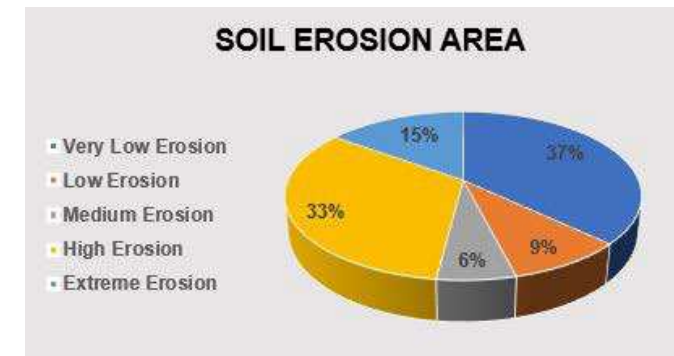

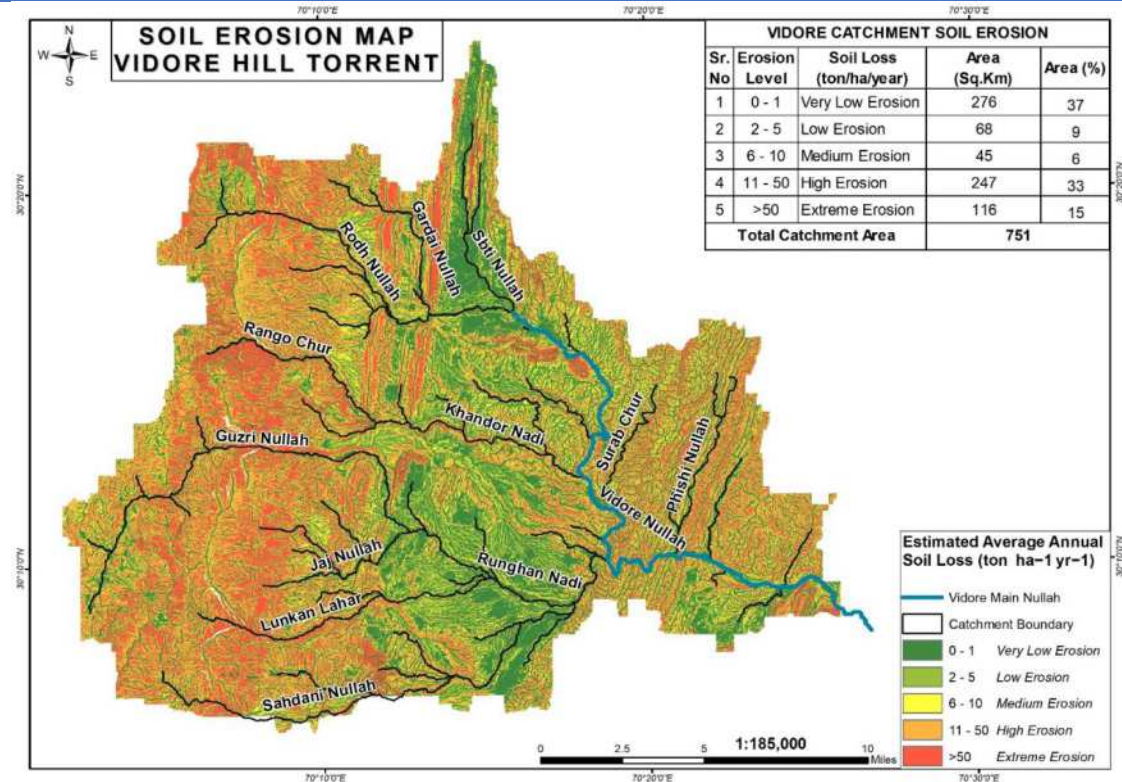

# Climate Change Adaptation in Hill Torrents of Punjab

## Identification of Erosion Risks (VIDORE)

- Sensitivity of land cover to erosion
- Sensitivity of slopes to erosion
- Sensitivity of lithology to erosion
- Cumulative erosion risk

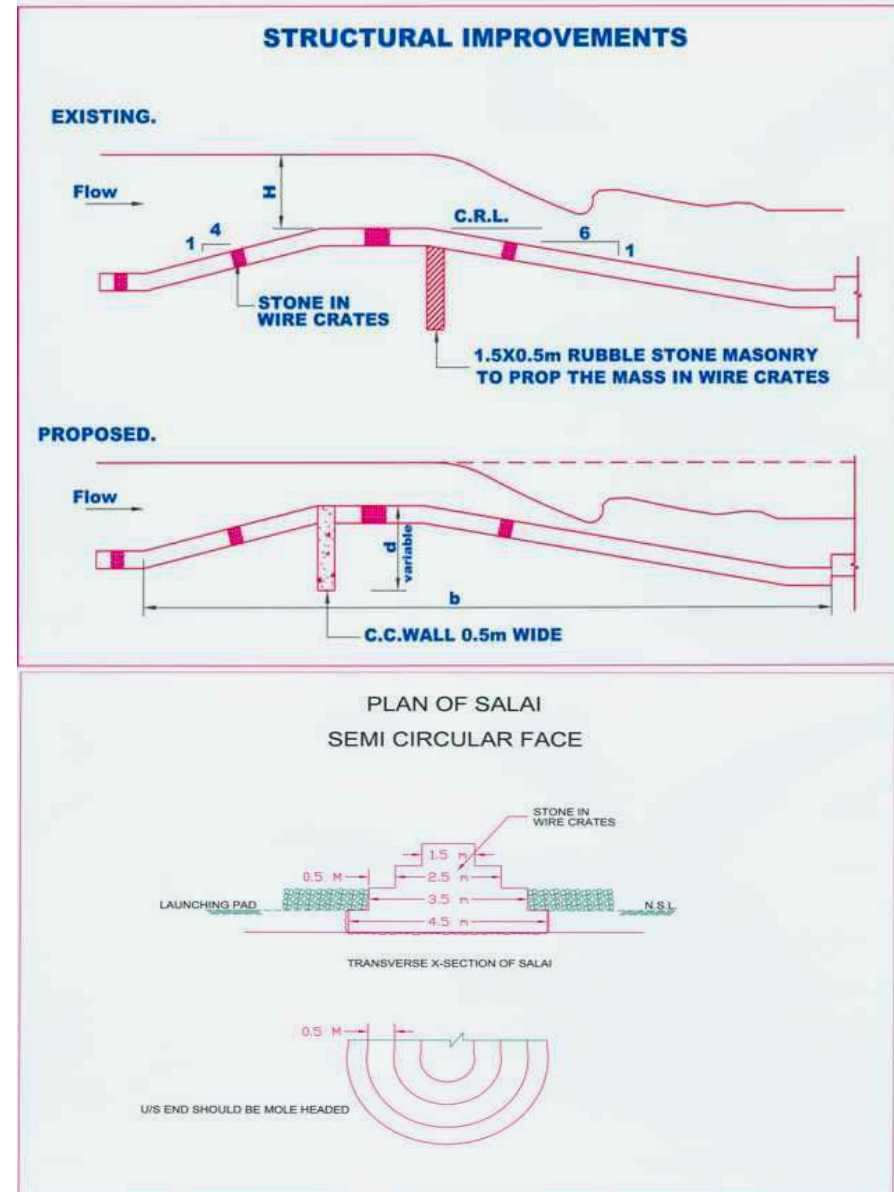

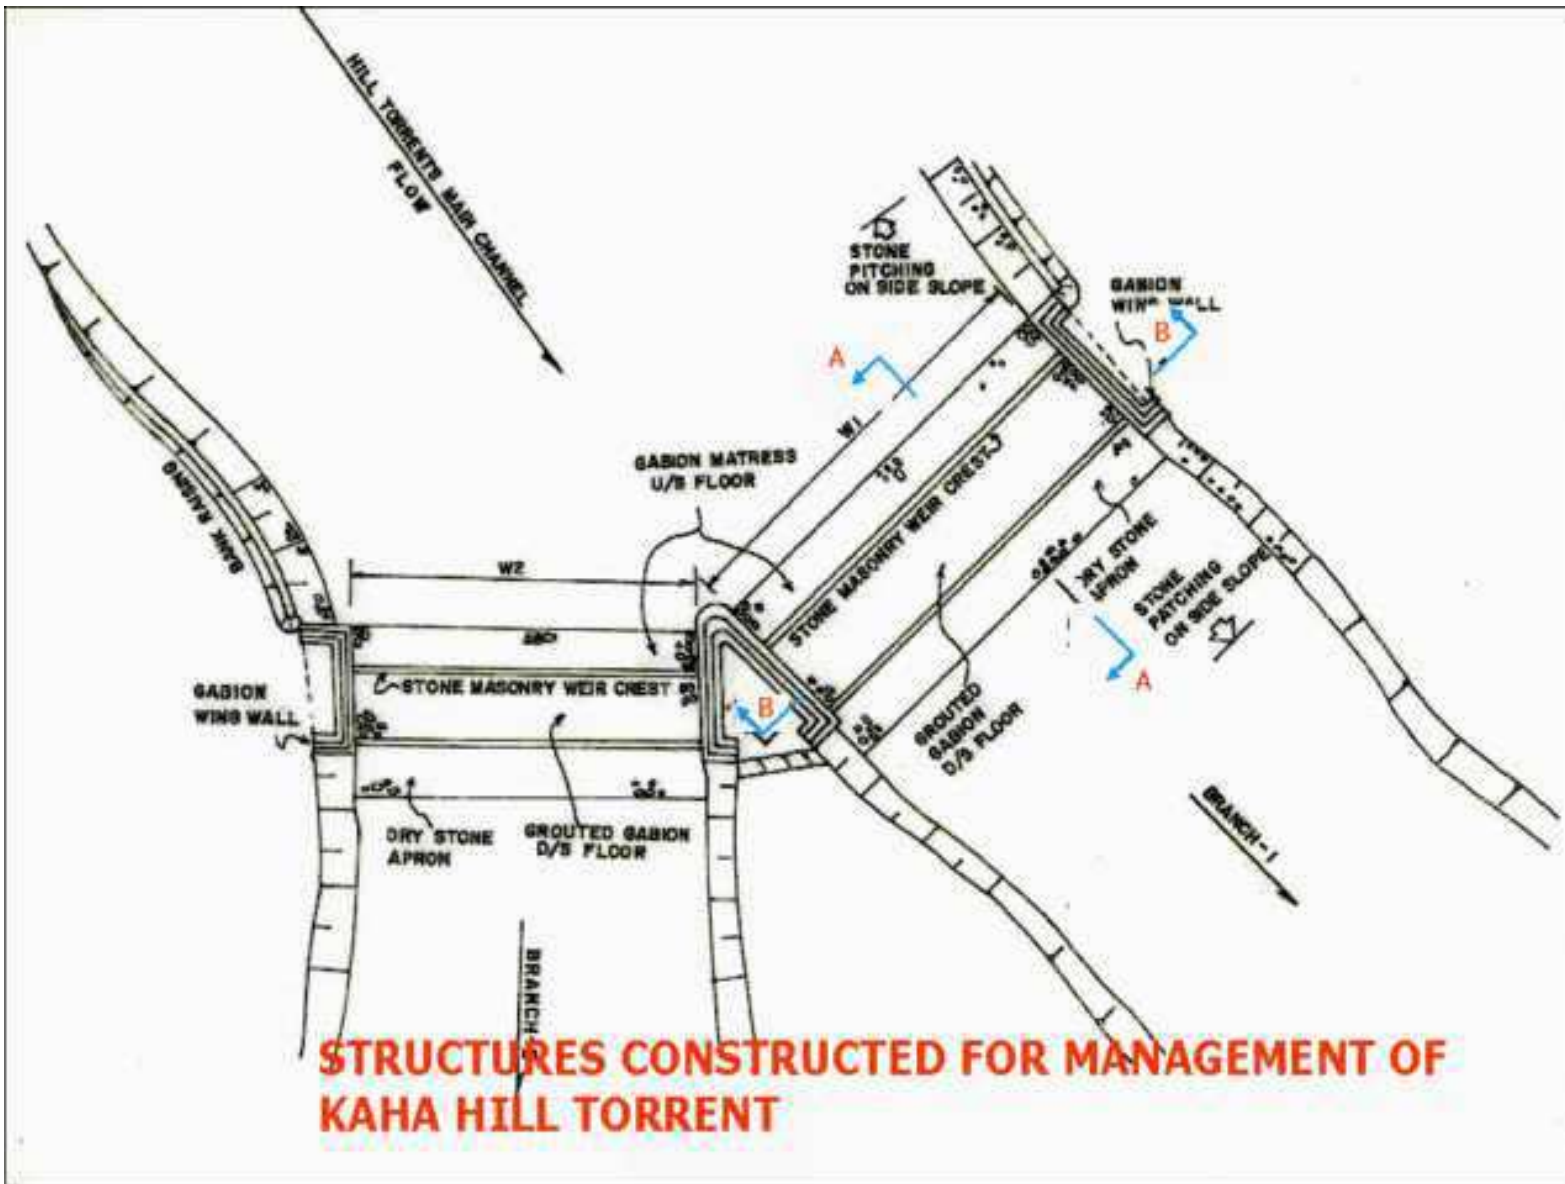

Watershed parts classified as high erosion will have priority to manage

VIDORE CATCHMENT SOIL EROSION				
Sr. No	Erosion Level	Soil Loss (ton/ha/year)	Area (Sq.Km)	Area (%)
1	0 - 1	Very Low Erosion	276	37
2	2 - 5	Low Erosion	68	9
3	6 - 10	Medium Erosion	45	6
4	11 - 50	High Erosion	247	33
5	>50	Extreme Erosion	116	15
<b>Total Catchment Area</b>			<b>751</b>
