EDUCATION
— is never —
END

Education refers to a formal conservative process that helps in the development of abilities, attitudes and other behavioural practical values in the society from which they belong, for the purpose of obtaining social competence and optimum development of an individual's potential.

Learning is automatic, i.e. we see things, we observe them and then learn something new through our experiences in our day to day life. So, it is a continuous process and also a life long one. Learning can be intentional or unintentional, conscious or unconscious, for better or for worse.
