Meeta

A chatbot to improve access to mental health support for youths in Bangladesh using generative AI

About Us

mPower is a global social enterprise working in the intersection of design and technology – using which we amplify the impact and outreach of development interventions.

REAN Foundation removes barriers to providing healthcare solutions in new and innovative ways to remote populations.

Mridul Chowdhury Founder & CEO mPower Social Enterprises Ltd.

Sri Vasireddy Founder & CEO **REAN Foundation**

Understanding Disparities

19.5m adults in Bangladesh

suffer from mental health issues, with a significant impact on youths

260 psychiatrists

to service this enormous population

CONTRIBU		JTING			
lna pri	De	Cu	aw	So	

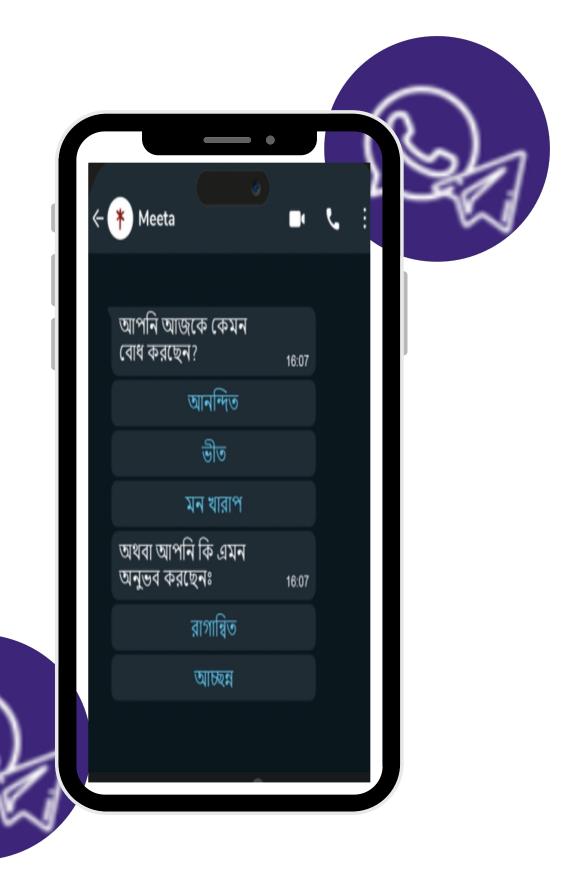

- ocial stigma and low vareness levels
- ultural sensitivity
- elayed detection
- adequate integration into imary care

Meeta

Meeta is a generative Al-driven assistant that addresses these challenges by providing an anonymous, **easily accessible, and culturally sensitive** mental health support

Improving awareness, and **facilitating early detection**, ongoing support, and possible integration with care pathways.

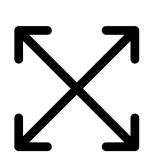

Compassionate Conversations

- Innovative Use of Popular Platforms for Accessibility
- Leveraging Generative AI for Natural Conversations, for better user acceptance as compared to traditional mHealth/chatbot solutions
- Integration with Health Services for Comprehensive Support
- Data-Driven Insights for Continuous Improvement

Advantages

Democratizing Access

Designed for self-care and awareness, requiring no specialized clinical skills from its users. This approach **democratizes access to mental health support**, especially useful as **primary care access for mental health** is fragmented.

Technical Deployment and Operational Ease

Leveraging popular and widely used platforms like WhatsApp for deployment, MEETA **simplifies the technical requirements** for both users and administrators. Its design ensures **ease of use**, with **intuitive interfaces** and straightforward navigation, **reducing the need for extensive digital literacy** or technical support

Contextual Suitability

The chatbot's ability to provide **information and support in local languages**, along with its **ease of access via popular platforms like WhatsApp**, makes it an excellent fit for Bangladesh

Combining mPower's expertise in running several impactful projects in Bangladesh with 100M+ lives impacted across 100+ deployments with partner organizations.

Valuable insights into user engagement, the effectiveness of autonomous assistants in raising awareness, and its potential to identify risks through interactive conversations from REAN HealthGuru.
