Introduction to the LEZ Maturity Assessment Toolkit (Beta Version)

In this session, we introduce the draft (beta) version of the LEZ Maturity Assessment Toolkit and begin the process of testing the tool and gathering user feedback.

The toolkit is designed to help cities and authorities assess their readiness to plan and implement Low Emission Zones (LEZ) in different contexts.

Objectives:

- Introduce the structure and purpose of the toolkit
- Demonstrate how the Excel-based tool works in practice
- Collect practical feedback from users to improve the methodology

Each Group

- Review the scenario
- Complete the maturity assessment
- Identify key gaps and priority actions needed for implementation

At the end of the session, each group will share their results, allowing us to compare findings and reflections on the tool. The feedback will help refine the toolkit for future real-world application

Summary & Closing Remarks

Toolkit Results & ADB's Support Process

The Toolkit helps ADB identify the right level of support by assessing a city's readiness for:

Pre-assessment and screening

Determining whether an LEZ is appropriate for the local context

Feasibility studies & modelling

Identifying data needs, gaps, and technical requirements

Pilots or implementation work

Understanding institutional capacity and governance readiness

Why this matters:

- Ensures ADB support is **targeted to the correct stage** of the LEZ journey
- Aligns with ADB's **structured project pipeline**, improving efficiency and impact
- Helps allocate technical assistance and investment resources **where they add the most value**
